PROJECT DESCRIPTION

GSW Arena LLC (GSW), an affiliate of Golden State Warriors, LLC, which owns and operates the Golden State Warriors National Basketball Association (NBA) team, proposes to construct a multi-purpose event center and a variety of mixed uses, including office, retail, open space and structured parking on an approximately 11-acre site (Blocks 29-32) within the Mission Bay South Redevelopment Plan Area of San Francisco. The project site is bounded by South Street on the north, Third Street on the west, 16th Street on the south, and by the future planned realigned Terry A. François Boulevard on the east. The proposed event center would host the Golden State Warriors basketball team during the NBA season, as well as provide a year-round venue for a variety of other uses, including concerts, family shows, other sporting events, cultural events, conferences and conventions. GSW has entered into an agreement to purchase the project site from the current site owner, an affiliate of salesforce.com. The project is subject to review under the California Environmental Quality Act (CEQA) and a number of local and state approvals.

FINDING

This project may have a significant effect on the environment and a Subsequent Environmental Impact Report (SEIR) is required. This determination is based upon the criteria of the State CEQA Guidelines, Sections 15063 (Initial Study), 15064 (Determining Significant Effect), and 15065 (Mandatory Findings of Significance), and for the reasons documented in the Environmental Evaluation (Initial Study) for the project, which is attached.

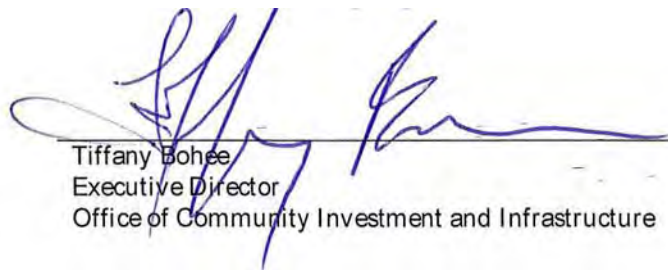

PUBLIC SCOPING PROCESS

The Office of Community Investment and Infrastructure (OCII) will hold a PUBLIC SCOPING MEETING on Tuesday, December 9, 2014, at 6:30 p.m. at the Mission Creek Senior Community, 225 Berry Street, Second Floor Cafeteria, San Francisco. The purpose of this meeting is to receive comments to assist the OCII in reviewing the scope and content of the environmental impact analysis and information to be contained in the SEIR for the project. To request a language interpreter or to accommodate persons with disabilities at the scoping meeting, please contact the staff listed above at least 72 hours in advance of the meeting. Written comments will also be accepted until 5:00 p.m. on December 19, 2014. Written comments should be sent to Tiffany Bohee, OCII Executive Director c/o Brett Bollinger, San Francisco Planning Department, 1650 Mission Street, Suite 400, San Francisco, CA 94103, or by email to warriors@sfgov.org.

If you work for a responsible State agency, we need to know the views of your agency regarding the scope and content of the environmental information that is germane to your agency's statutory responsibilities in connection with the proposed project. Your agency may need to use the SEIR when considering a permit or other approval for this project. Please include the name of a contact person in your agency.

Members of the public are not required to provide personal identifying information when they communicate with the OCII Commission, OCII or the Planning Department. All written or oral communications, including submitted personal contact information, may be made available to the public for inspection and copying upon request and may appear on the OCII or Planning Department's website or in other public documents.

INITIAL STUDY

Event Center and Mixed-Use Development at Mission Bay Block 29-32 Office of Community Investment and Infrastructure Case No. ER 2014-919-97 Planning Department Case No. 2014.1441E

A. PROJECT DESCRIPTION

A.1 Overview

GSW Arena LLC (GSW), an affiliate of Golden State Warriors, LLC, which owns and operates the Golden State Warriors National Basketball Association (NBA) team, proposes to construct a multi-purpose event center and a variety of mixed uses, including office, retail, open space and structured parking on an approximately 11-acre site (Blocks 29-32) within the Mission Bay South Redevelopment Plan Area of San Francisco (see **Figure 1** for aerial photograph and **Figure 2** for existing roadway network in Mission Bay). The project site is bounded by South Street on the north, Third Street on the west, 16th Street on the south, and by the future planned realigned Terry A. François Boulevard on the east. The proposed event center would host the Golden State Warriors basketball team during the NBA season, as well as provide a year-round venue for a variety of other uses, including concerts, family shows, other sporting events, cultural events, conferences and conventions. GSW has entered into an agreement to purchase the project site from the current site owner, an affiliate of salesforce.com. The project is subject to review under the California Environmental Quality Act (CEQA) and a number of local and state approvals.

Development is allowed within the Mission Bay South Redevelopment Plan Area, including Blocks 29-32, consistent with the land use program and subject to the development controls of the *Mission Bay South Redevelopment Plan*, *Mission Bay South Design for Development*, and other related documents (see *Background*, below). No amendment to the South Plan would be required, although the proposed project at Blocks 29-32 would require certain amendments and/or variations to other documents.

The *Mission Bay Final Subsequent Environmental Impact Report* (Mission Bay FSEIR), certified in September 1998, is a program EIR under CEQA Guidelines 15168 and a redevelopment plan EIR under CEQA Guidelines 15180 (see *Background*, below). The Mission Bay FSEIR analyzed the environmental impacts associated with the development program proposed for the entire plan area, including the program under the Mission Bay South Redevelopment Plan, which includes Blocks 29-32. Thus, under CEQA, the proposed project at Blocks 29-32 is considered a subsequent activity under the Mission Bay South Redevelopment program, and this Initial Study evaluates the environmental effects of the proposed project relative to the certified Mission Bay FSEIR.

This Initial Study is prepared in accordance with the CEQA Guidelines Section 15063, which provides for preparation of an initial study to determine if a project may have a significant effect on the environment, and with CEQA Guidelines Section 15168(c), which provides for subsequent activities in a program to be examined in the light of a previously certified program EIR. The City's Office of Community Investment and Infrastructure (OCII) is the CEQA lead agency for this project, and has entered into an agreement with the San Francisco Planning Department, Environmental Planning Division, to assist in the preparation of the related environmental review documents.

Event Center and Mixed-Use Development at Mission Bay Blocks 29-32

Figure 2
Existing Roadway Network in Mission Bay

This Initial Study, consistent with CEQA Guidelines Sections 15063(b)(1)(C) and 15168(d)(1), provides documentation to determine which of the project's effects were adequately examined in the Mission Bay FSEIR and which topics warrant more detailed environmental analysis (see Section D, Approach to Analysis, below). The topics which warrant more detailed environmental analysis are those that implementation of the proposed project could result in either new significant effects or substantially more severe impacts than were previously identified in the Mission Bay FSEIR. For these topics, a focused environmental impact report (EIR) will be prepared; the focused EIR will be a Subsequent EIR (SEIR) per CEQA Guidelines Section 15162.

A.2 Background

Mission Bay South Redevelopment Plan Approval Process and Prior Environmental Review

On August 23, 1990, the San Francisco Board of Supervisors certified the *Mission Bay Final Environmental Impact Report* (the "1990 FEIR").¹ The 1990 FEIR assessed the development program that was ultimately adopted as the *Mission Bay Plan, an Area Plan of the San Francisco General Plan*. In 1996-97, the former San Francisco Redevelopment Agency, with Catellus Development Corporation as project sponsor, proposed a new project for the Mission Bay area, consisting of two separate redevelopment plans (*Mission Bay North Redevelopment Plan* and *Mission Bay South Redevelopment Plan*) ("North Plan" and "South Plan" or, collectively, the "Plans") in two redevelopment project areas separated by the China Basin Channel.

On September 17, 1998, the San Francisco Planning Commission and the former Redevelopment Agency Commission certified the *Mission Bay Final Subsequent Environmental Impact Report* ("Mission Bay FSEIR").² The Mission Bay FSEIR analyzed reasonably foreseeable development under the Plans. It incorporated by reference information from the original 1990 FEIR that continued to be accurate and relevant for analysis of the Plans. Thus, the 1990 FEIR and the Mission Bay FSEIR together constitute the environmental documentation for the Plans. The 1990 FEIR and Mission Bay FSEIR are program EIRs under CEQA Guidelines 15168 and redevelopment plan EIRs under CEQA Guidelines 15180.

The former Redevelopment Agency Commission adopted the North and South Plans on September 17, 1998, along with the Mission Bay North Owner Participation Agreement (as subsequently amended, the "North OPA") and Mission Bay South Owner Participation Agreement (as subsequently amended, the "South OPA"), which are between the former Redevelopment Agency, now OCII as successor to the Redevelopment Agency, and the Mission Bay Master Developer (originally Catellus Development Corporation and now FOCIL-MB, LLC, the successor to Catellus Development Corporation).³ The land uses in the adopted Mission Bay plan are generally illustrated in **Figure 3**.⁴

¹ Planning Department Case No. 86.505E.

² Planning Department Case No. 96.771E, Redevelopment Agency Case No. ER 919-97.

³ Resolution No. 191-98, and No. 188-98, respectively.

⁴ It should be noted that the land use program in the adopted Mission Bay plan was developed from the proposed plan plus a combination of plan variants described and analyzed in the Mission Bay FSEIR. Specifically, the adopted Mission Bay Redevelopment Plan was based on the plan description in the Mission Bay FSEIR, plus Variant 1 (Terry A. François Boulevard Variant/Expanded Bayshore Open Space Proposal), Variant 2 (Esprit Commercial Industrial/Retail Variant), Variant 3A (Modified No Berry Street Crossing Variant), and Variant 5 (Castle Metals Block Commercial Industrial/Retail Variant). The adopted plan was described in the Mission Bay FSEIR Chapter III, Project Description, and Section VII.G, Combination of Variants Currently under Consideration by the Project Sponsors. The Mission Bay FSEIR concluded that the environmental effects of the combination of plan variants would be similar to those of the proposed plan, and consequently, would not result in any new or substantially more severe significant effects identified in the Mission Bay FSEIR for the proposed plan.

Event Center and Mixed-Use Development at Mission Bay Blocks 29-32

Figure 3
Land Uses in the Mission Bay Redevelopment Plan

The North and South OPAs incorporated into the Plan the mitigation measures identified in the Mission Bay FSEIR and adopted by the former Redevelopment Agency Commission at the time of Plan approval.⁵ As authorized by the Plans, the former Redevelopment Agency Commission simultaneously adopted design guidelines and standards governing development, contained in companion documents, the Design for Development for the Mission Bay North Project Area (the “North Design for Development”) and the Design for Development for the Mission Bay South Project Area (the “South Design for Development”), respectively.⁶ The San Francisco Board of Supervisors adopted the North Plan on October 26, 1998, and the South Plan on November 2, 1998.⁷ The South OPA has been amended four times, the first amendment dated February 17, 2004, the second dated November 1, 2005, the third dated May 21, 2013, and the fourth dated June 4, 2013.

The Redevelopment Agency has prepared nine addenda to the Mission Bay FSEIR (completed between 2000 and 2013) for specific developments within Mission Bay that required additional environmental review of specific issues beyond those that were covered in the 1998 FSEIR; in all of these cases, none of the conditions triggering a Subsequent or Supplemental EIR were met. These addenda are as follows:

- The first addendum, dated March 21, 2000, analyzed the ballpark parking lots.
- The second addendum, dated June 20, 2001, addressed Infrastructure Plan revisions related to the 7th Street bike lanes and relocation of a storm drain outfall.
- The third addendum, dated February 10, 2004, addressed revisions to the South Design for Development with respect to the maximum allowable number of towers, tower separation, and required setbacks.
- The fourth addendum, dated March 9, 2004, addressed revisions to the South Design for Development with respect to the permitted maximum number of parking spaces for biotechnical and similar research facilities, and specified certain changes to the North OPA to reflect a reduction in permitted commercial development and associated parking.
- The fifth addendum, dated October 4, 2005, addressed revisions to the University of California San Francisco (UCSF) Long Range Development Plan and the Final Environmental Impact Report for the Long Range Development Plan.
- The sixth addendum, dated September 10, 2008, addressed revisions of the UCSF Medical Center at Mission Bay.
- The seventh addendum, dated January 7, 2010, analyzed the development of a Public Safety Building on Mission Bay Block 8 to accommodate the headquarters of the San Francisco Police Department, a local Police Station, and new San Francisco Fire Department station, and adaptive reuse of historic Fire Station 30, along with parking for these uses.
- The eighth addendum, dated May 15, 2013, analyzed amendments to the South Plan and South OPA to allow a mix of hotel, residential, and retail use on Block 1.
- The ninth addendum, dated May 30, 2013, addressed development on Block 7E for a facility housing extended stay bedrooms and associated facilities to support families of patients receiving medical treatment primarily at UCSF’s medical facilities.

⁵ North and South OPAs, Attachment L.

⁶ Resolution No. 191-98 and Resolution No. 186-98, respectively.

⁷ Ordinance No. 327098 North and South OPAs, Attachment L and Ordinance No. 335-98, respectively.

Successor Agency/Oversight Board Jurisdiction

The former San Francisco Redevelopment Agency, along with all 400 redevelopment agencies in California, was dissolved on February 1, 2012, by order of the California Supreme Court in a decision issued on December 29, 2011 (*California Redevelopment Association et al. v. Ana Matosantos*). On June 27, 2012, the California Legislature passed and the Governor signed Assembly Bill (AB) 1484, a bill making technical and substantive changes to AB 26, which was the original bill that resulted in the dissolution of all redevelopment agencies. (Together, AB 26 and AB 1484 are referred to as “Dissolution Law,” which is codified at California Health and Safety Code Sections 34161 – 34191.5). In response to the Dissolution Law the San Francisco Redevelopment Agency became the Successor Agency to the Redevelopment Agency of the City and County of San Francisco (Successor Agency), commonly known as the Office of Community Investment and Infrastructure (OCII). Pursuant to state and local legislation, the Successor Agency is governed by two bodies, the Oversight Board of the Successor Agency and the Commission on Community Investment and Infrastructure.

On January 24, 2012, the Board of Supervisors of the City and County of San Francisco adopted Resolution No. 11-12 in response to the Supreme Court’s December 29, 2011 decision upholding AB 26. On September 25, 2012, the Board of Supervisors adopted Ordinance No. 215-12 in response to the Governor’s approval of AB 1484. Together, these two local laws (“Successor Agency Legislation”) create the governing structure of the OCII. Pursuant to the Successor Agency Legislation, the Commission on Community Investment and Infrastructure exercises certain land use, development and design approval authority for the Mission Bay North and Mission Bay South Plan areas (and other major approved development projects), and the Oversight Board exercises certain fiscal oversight and other duties required under the Dissolution Law.

South Plan Area Development Controls

The primary development controls for the Mission Bay South Redevelopment Plan Area (“South Plan Area”) are the South Plan and the South Design for Development, which together specify development standards for the project site at Blocks 29-32, including standards and guidelines for height, setbacks, and coverage. In accordance with California Community Redevelopment Law, when the Board of Supervisors approved the South Plan in 1998, land use and zoning approvals within Mission Bay came under the jurisdiction of the former Redevelopment Agency, now OCII, as described above. Together, the South Plan and South Design for Development constitute the regulatory land use framework for the project site, and they supersede the City’s *Planning Code*, except as otherwise specifically provided in those documents and associated documents for implementing the Plans.

The infrastructure serving the South Plan Area is provided by the master developer, FOCIL-MB, LLC, consistent with the South OPA, including the Mission Bay South Infrastructure Plan (Attachment D to the South OPA). The South OPA includes triggers for the phasing of required infrastructure improvements based on adjacency, ratios, and performance standards to ensure that the master developer phases the required infrastructure to match the phasing of private development occurring on adjacent blocks. In addition to the South Plan and South Design for Development, the other major development controls that apply to the project site include:

- Mitigation measures included in the Mission Bay FSEIR and which OCII has identified as required to be implemented by the developer of the project site;
- All other associated adopted plans and documents that apply in the South Plan Area under the Plan and OPA, such as the 1999 Mission Bay Risk Management Plan, with amendments (including Article 22A of the San Francisco Health Code for analyzing soils for hazardous waste), Mission Bay South Streetscape Master Plan, and Mission Bay South Signage Master Plan; and
- Other adopted City plans and regulations that apply in the South Plan Area, such as the San Francisco Building Code; Chapter 7 of the San Francisco Environment Code, "Resource Efficiency Requirements," and any engineering requirements applicable under City Code to the development.

Relevant portions of the South Plan and South Design for Development as they pertain to Blocks 29-32 are described below.

South Plan Development Controls for Blocks 29-32

In addition to providing overall planning objectives for the plan area, the South Plan designates land uses for specific parcels. Proposed land uses to be permitted for Blocks 29-32 are designated as Commercial Industrial/Retail (Attachment 3 of the South Plan), and the plan provides for either principal or secondary uses at this site. Primary uses are permitted in accordance with the plan's provisions, and secondary uses are permitted provided that such use generally conforms with redevelopment objectives and planning and design controls established pursuant to this plan. The OCII Executive Director must make a determination that secondary uses make a positive contribution to the character of the plan area, and that the secondary use "will provide a development that is necessary or desirable for, and compatible with, the neighborhood or the community."

The South Plan identifies the following principal uses under the Commercial Industrial/Retail land use designation applicable to Blocks 29-32: manufacturing; institutions; retail sales and services; arts activities and spaces; office use; home and business services; animal care; wholesaling; automotive; and other uses (e.g., greenhouse, nursery, open recreation and activity areas, parking and certain telecommunications-related facilities). The following secondary uses are identified: institutions, assembly and entertainment, and other uses (public structure or use of a nonindustrial character).

The South Plan also describes general controls and limitations for development, and sets limits on leasable square footages of various uses within defined zones within the plan area, including the project site. The plan sets a maximum floor area ratio of 2.9 to 1 for the commercial industrial/ retail uses at the project site, and the maximum building height within the entire plan area is 160 feet. The plan further indicates that within the limits, restrictions and controls established in the plan, OCII is authorized to establish height limits of buildings, land coverage, density, setback requirements, design and sign criteria, traffic circulation and access standards and other development and design controls in the Design for Development.

South Design for Development Controls for Blocks 29-32

The Mission Bay South Design for Development, a companion document to the South Plan, contains the design standards and design guidelines applicable to Blocks 29-32. The project site is within Height Zone 5,

which specifies that 7 percent of the developable area (within the entire height zone) may be occupied by a maximum of three towers up to 160 feet in height, and the remaining 93 percent of the development could be at a maximum of 90 feet. However, buildings along Terry A. François Boulevard, including Blocks 30 and 32, may not exceed 90 feet in height, and no towers are permitted on Blocks 30 and 32.

Within this Height Zone 5, the South Design for Development also establishes bulk limits for development at a height greater than 90 feet (i.e., towers). The maximum tower length above 90 feet is 200 feet, and the maximum floor plate is 20,000 square feet. Further, the South Design for Development identifies setback requirements applicable to Blocks 29-32, with a minimum of 5 feet along Third Street and 20 feet along 16th Street; these setbacks are in addition to specified sidewalk widths on these streets and may be used for paved pathways and landscaping as appropriate. The minimum streetwall height is 15 feet.

Design guidelines for Commercial/Industrial buildings along the Bayfront Park (adjacent to the project site) indicate that homogeneous and unrelieved façades should be avoided. Design guidelines for city-serving retail uses at Blocks 29-32 include: street level frontage should provide visually interesting features; the block façade line should be consistent with block development throughout Mission Bay; and curb cuts are strongly discouraged along Third Street.

A.3 Project Characteristics

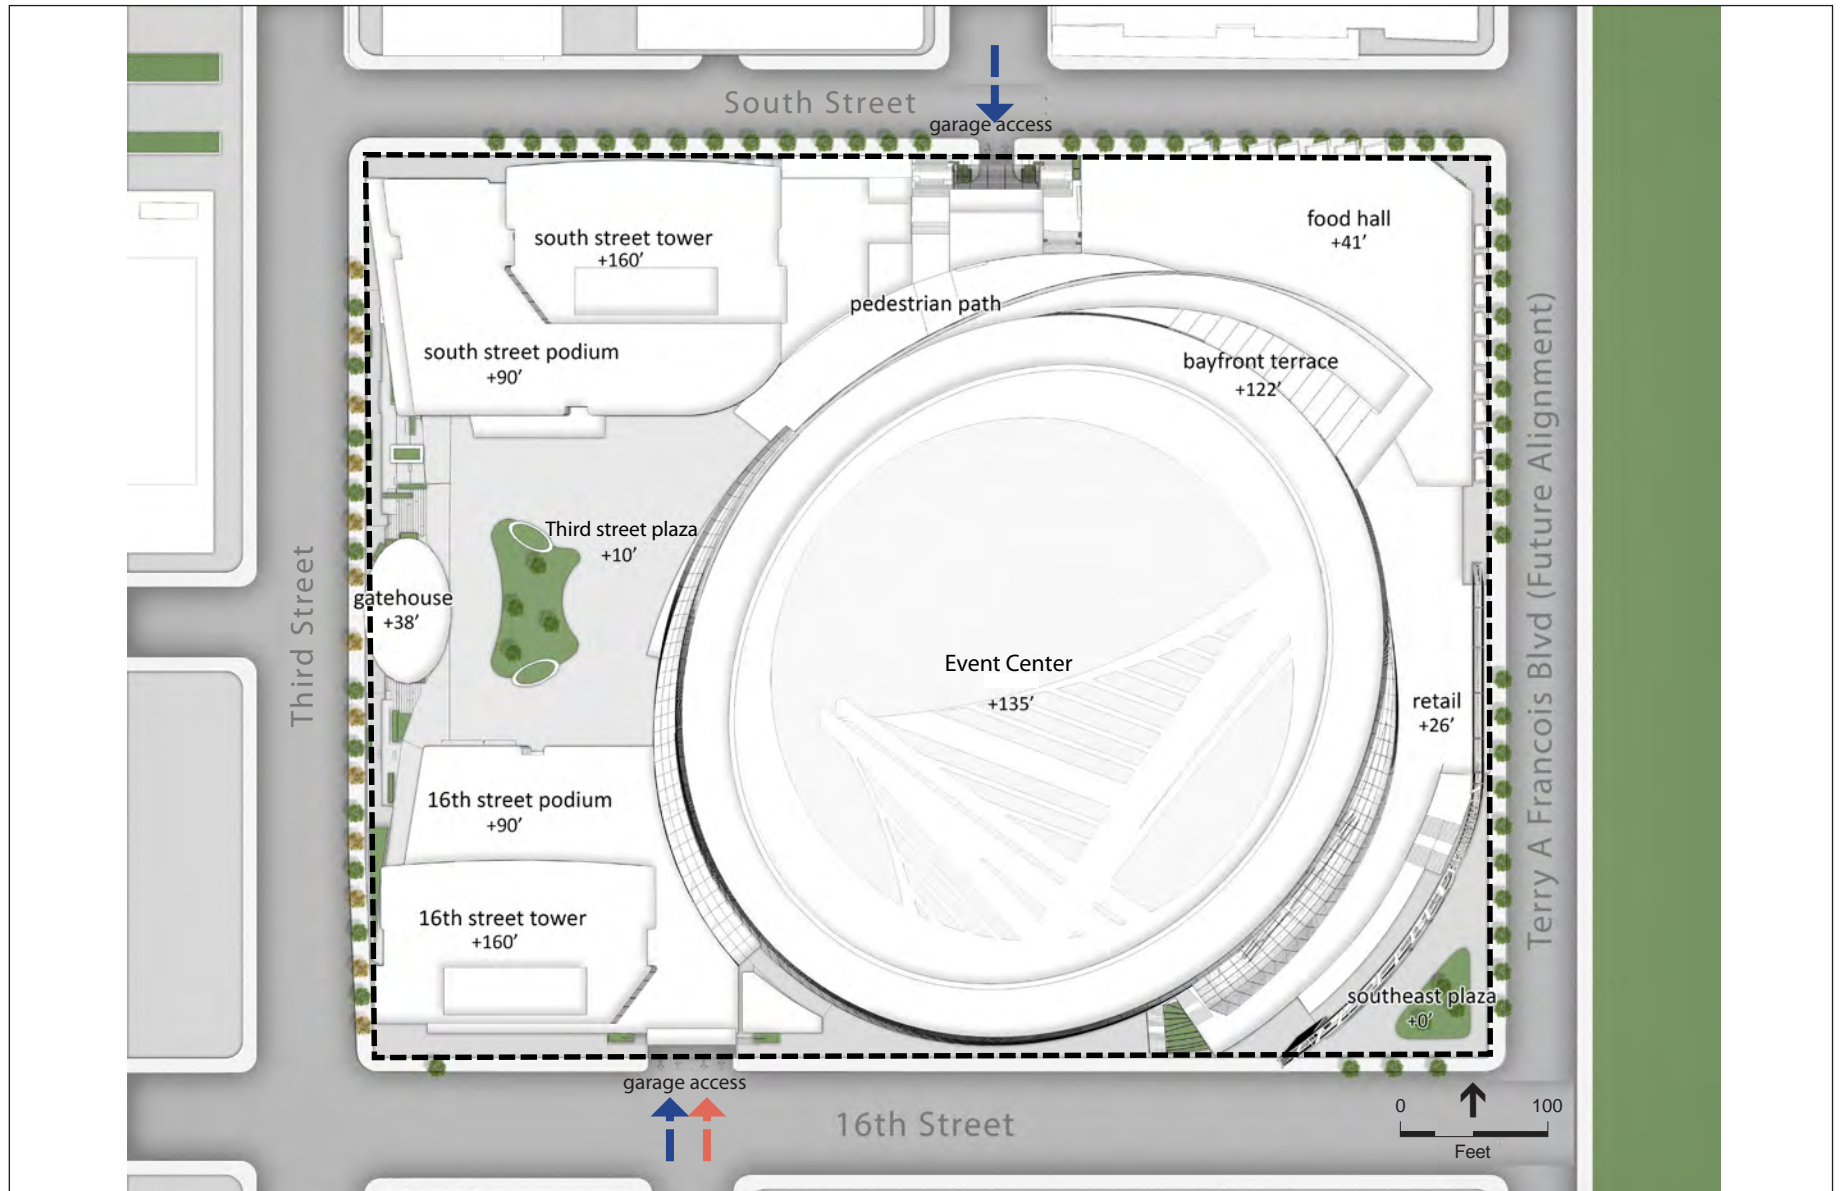

Proposed Facilities

Development Plan Overview

Under the project, Blocks 29-32 would be developed with a multi-purpose event center and a variety of mixed uses, including office, retail, open space and structured parking on the approximately 11-acre site. **Figure 4** presents the conceptual project site plan, illustrating primary project features and associated building heights.⁸ **Table 1** provides a summary overview of the key characteristics of the project facilities.

The proposed roughly circular-shaped event center building would be located in the central-east portion of the site. The event center building would be approximately 135 feet at its roof peak, and would include multiple levels of varying elevations. The event center would include a wide variety of facilities, including spectator seating and suites, restaurants/bars and clubs, meeting rooms; spectator support facilities such as food service/kitchens, concessions, merchandising and restrooms; Golden State Warriors management offices and practice facility; media support facilities, and event center operations such as loading, staging and marshaling areas, mechanical/electrical/plumbing space and storage and maintenance facilities. Two

⁸ For purposes of this Initial Study, ground elevations and building heights, except where noted otherwise, are as measured relative to San Francisco City Datum (SFD). SFD establishes the City's zero point for surveying purposes at approximately 8.6 feet above the mean sea level established by 1929 U.S. Geological Survey datum, and approximately 11.3 feet above the current 1988 North American Vertical Datum. Note there is also a Mission Bay Datum, equal to SFD + 100 feet. It should also be noted the method used in this Initial Study for measuring building heights differs from that specified in Section 102.12 of the San Francisco Planning Code, which provides a method for measuring building heights for purposes of consistency with the Planning Code. Under Section 102.12, building heights are generally measured from the height of the curb of the sidewalk most proximate to the property.

OCII Case No. ER 2014-919-97; Planning Department Case No. 2014.1441E:
Event Center and Mixed-Use Development at Mission Bay Blocks 29-32

Note: Elevation values as measured relative to San Francisco City Datum

Figure 4
Conceptual Project Site Plan

**TABLE 1
SUMMARY OF PROPOSED PROJECT FACILITIES**

Project Component	Characteristic
Event Center Basketball Seating Capacity	18,064 seats ^a
Size	Total GSF
Event Center ^b	750,000
Golden State Warriors Office Space	25,000
Office Space	580,000
Retail Space ^c	125,000
Parking and Loading	<u>475,000</u>
Total Building Area	1,955,000 GSF^d
Height^e/Levels	
Event Center	135 feet
Office and Retail Buildings	160 feet (11 stories) total [90-foot (6-story) podiums with 70-foot (5-story) towers above]; retail uses within street level and plaza-level floors
Retail-only Buildings	41 feet in market hall building northeast corner of site; 38 feet in gatehouse building along Third Street
Parking/Loading Spaces	Blocks 29-32: 950 parking stalls below-grade or at-grade (concealed by Third Street Plaza) 13 truck docks below-grade Existing off-site at 450 South Street Parking Garage: 132 parking stalls
Vehicular Access	Access point for autos and all large trucks on 16th Street at Illinois Street Access point for autos and small trucks on South Street at Bridgeview Way
Open Space	3.2 acres

NOTES:

GSF = gross square feet.

- ^a Presented maximum seating capacity is for basketball games. However, as discussed under *Proposed Operations and Employment*, below, there would other types of events at the event center, including certain concerts and conventions, that would be able to accommodate a maximum attendance of up approximately 18,500 patrons.
- ^b The event center would include a variety of supporting uses, including Golden State Warriors practice facility and management offices, bayfront terrace, limited retail, and other uses. For purposes of estimating areas, the Golden State Warriors management office space square footage is presented separately from square footage of the other event center uses.
- ^c Proposed retail uses are approximately 51,500 GSF sit-down restaurant, 11,000 quick-service restaurant, and 62,500 GSF soft goods retail including food retail.
- ^d The CEQA analyses are based on gross square footage. However, the Mission Bay South Redevelopment Plan permits development based on adjusted gross square footage and leasable square footage. Gross Square Footage and Leasable Square Footage as defined in the Mission Bay South Redevelopment Plan for this project would be less than the gross square footage presented in this environmental document.
- ^e Building heights as measured relative to San Francisco City Datum (SFD). Excludes unoccupied top floor level with mechanical equipment.

SOURCE: Manica Architecture, 2014

office and retail buildings would be located on the west side of the project site, at the corner of Third Street and South Street (northwest corner of site) and at the corner of Third Street and 16th Street (site southwest corner). The two office and retail buildings would each consist of 11 stories (160 feet tall); each office and retail building would consist of a podium ground level plus 5 podium levels (90 feet tall), with a 5-story (70-foot) tower (with smaller floorplate than the podium) above. These buildings could serve a variety of office and/or research and development uses. Retail uses would occupy several areas of the site, including the lower floor(s) of the two office and retail buildings, within or adjacent to certain plaza-facing areas of the

event center (including in the 38-foot high “gate house” building located along Third Street), and 41-foot high retail building along Terry A. François Boulevard and South Street.

Three levels of enclosed on-site parking (two below grade, and one at street level) providing 950 parking spaces would be located below the office and retail buildings and plaza areas. (See also *Off-site Parking Facilities*, below.) Approximately 3.2 acres of open space would be located on-site, including a proposed Third Street Plaza (elevated at approximately 8 feet above Third Street) on the west side of the project site between the event center and Third Street, and a proposed ground-level Southeast Plaza in the southeastern corner of the site.⁹ These plazas would be connected by a pedestrian ramp wrapping around the exterior of the north and eastern-sides of the event center, and an outdoor covered passageway, or atrium, wrapping around the southwest portion of the event center.

While the project would not be subject to the City’s *Standards for Bird-Safe Buildings*, the project sponsor proposes to incorporate bird-safe measures that would reduce the potential effects of the project on birds.

Vehicular Access and Circulation

All vehicular ingress/egress for the garage would occur at 16th Street (at Illinois Street) or South Street (at Bridgeview Way). The 16th Street driveway would serve as the primary vehicular access point for autos to the parking garage, and the sole access point for trucks to the below-grade loading docks. Most proposed loading and service areas would be located on the lower level, while one loading slip would be provided at grade (concealed from view beneath the pedestrian path) to serve retail located at the site’s northeastern corner. A total of 13 truck docks would be provided to serve the event center and office and retail uses. The South Street driveway would provide a secondary access for autos to the garage and small delivery trucks for retail located at the site’s northeastern corner. (See also *Proposed Operations*, below, for a description of the proposed *Transportation Management Plan* that the sponsor would implement as part of the project.)

Pedestrian and Bicycle Access

The primary pedestrian access to the event center for large attendance events would be via the Third Street Plaza. The Southeast Plaza would serve as a primary pedestrian access for smaller-attendance events, and as a secondary access point for large-attendance events. Pedestrian access to the two office and retail buildings would be available on South and 16th Streets and from the Third Street plaza, with additional access to ground-floor retail uses within those buildings available via South and Third Streets. The retail buildings in the northeast corner of the site would be accessed directly via Terry A. François Boulevard and South Street. New sidewalks would be constructed along the perimeter of the project site.

Bike storage rooms would be located in each of the proposed office and retail buildings. Bike parking and storage racks would also be available at various locations along the perimeter of the project site, with bike valet service in proximity to the site and temporary bike corrals located within the plaza areas to serve patrons as needed.

⁹ It should be noted that midpoint on the sidewalk on Terry A. François Boulevard adjacent to the site is approximately 0 feet SFD, and midpoint on the sidewalk on Third Street adjacent to the site is approximately 2 feet SFD.

Infrastructure Improvements

The project proposes all new utility infrastructure facilities on-site, including water supply (low- and high-pressure water lines and recycled water lines); wastewater collection; storm drainage; electrical/gas, and communications. Infrastructure and utilities within adjacent streets that serve the project site are provided by the master developer, FOCIL-MB, LLC, as part of the Mission Bay South Infrastructure Plan.

Off-Site Parking Facilities

As part of the project, the sponsor has acquired 132 existing off-site parking spaces in the 450 South Street parking garage, accessed from South Street and Bridgeview Way directly north of the project site, to provide additional parking to serve the project.

Sustainability

The proposed development would be subject to a number of sustainability requirements, including the California CalGreen Code, City of San Francisco Green Building Code, Design for Development for the Mission Bay South Area, and the 2012 NBA Arena Design Standards – Sustainability Requirements. The project would be designed to Leadership in Energy and Environmental Design (LEED®) Gold standards using a campus approach, whereby each individual proposed structure as well as the overall site would qualify for individual Gold ratings.¹⁰ This would be achieved through incorporation of a variety of design features and implementation of practices during construction and operation to provide energy and water conservation and efficiency, encourage alternative transportation, promote a healthy indoor environment, minimize waste, and maximize recycling opportunities.

South Plan Improvements Planned in the Vicinity of the Project Site: Terry A. François Boulevard Realignment and Public Access Improvements at Bayfront Park

Pursuant to the Mission Bay Plan and not part of the proposed project, development of Blocks 29-32 would trigger the realignment of Terry A. François Boulevard to extend adjacent to the east side of Blocks 29-32, and the construction of public access improvements at Bayfront Park east of this realigned roadway. The realigned Terry A. François Boulevard would contain four travel lanes (two northbound and two southbound) plus two parking lanes; and - on the east side of the roadway – a two-way cycletrack (bike path) separated from the roadway by a raised buffer.

Following realignment of Terry A. François Boulevard, Bayfront Park would be improved and expanded to 5.5 acres, encompassing an area roughly south of Pier 54, north of 16th Street, east of Terry A. François Boulevard, and west of the Bay shoreline. Both the realignment of Terry A. François Boulevard and Bayfront Park public access improvements would be implemented by the master developer, FOCIL-MB, LLC, prior to occupancy of buildings at the project site.

¹⁰ The Leadership in Energy and Environmental Design (LEED®) is a program developed and administered by the U.S. Green Building Council that provides third-party verification of green building projects. LEED® uses a green building rating system designed to reduce the negative environmental impacts of buildings and improve occupant health and well-being. Building projects satisfy prerequisites and earn points to achieve different levels of certification.

Proposed Operations and Employment

Under the project, the event center at Blocks 29-32 would serve as the new venue for the Golden State Warriors home games, and provide a year-round venue for a variety of other uses, including concerts, family shows, other sporting events, cultural events, conferences and conventions. The event center would be used for up to approximately 225 events per year, with events ranging in capacity from approximately 3,000 up to about 18,500. All existing Golden State Warriors operations, including management offices and practice facility, would relocate from their existing facilities in Oakland to the new event center. The proposed office and retail facilities on Blocks 29-32 would operate year-round, independent of the event center operations. The following provides additional information for each of the proposed new operational components at Blocks 29-32.

Event Center Programming

Golden State Warriors Games. Under the project the Golden State Warriors would host two to three preseason basketball games (in mid- to late October) and 41 regular season basketball games (from late October to mid-April) at the event center. If the Golden State Warriors reach the postseason, they would host anywhere from 2 to 16 playoff games (from mid-April to mid-June). The large majority of Golden State Warriors home basketball games would start at 7:30 p.m. and conclude between 10:00 p.m. and 10:30 p.m. The home game schedule at the proposed event center would be similar to the Warriors schedule at Oracle Arena, the team's existing home venue in Oakland.

As described in Table 1, the maximum basketball seating capacity at the event center would be 18,064, less than the maximum basketball seating capacity of approximately 19,600 at Oracle Arena. The average basketball attendance levels at the proposed event center are estimated to be approximately 17,000 during the regular season, with regular season and post-season attendance reaching the maximum capacity of 18,064.

It is estimated that approximately 1,000 day-of-game non-Warriors employees¹¹ would be required on game days at the event center to work in various operations and jobs, including security, ushers, ticket takers, team store, food service, cleaning crew, scoreboard/video operators and other event-related operations. In addition, up to 100 Golden State Warriors' employees (e.g., representatives from Warriors sales, services, marketing and game operations) would work at the games at the event center (please see additional detail of Golden State Warriors employment under *Golden State Warriors Operations*, below).

Non-Golden State Warriors Events at the Event Center. The event center would serve as a venue for a variety of non-Golden State Warriors events throughout the year, including concerts, family shows, other sporting events, and conventions/corporate events. Approximately 160 non-Golden State Warriors game events would occur annually at the event center, that could typically include the following:

¹¹ This event center day-of-game employee estimate does not include Warriors employees that would occupy the management offices in the event center and employees of the proposed retail uses on the project site, both of which are described separately, below.

- *Family Shows:* It is estimated that the event center would host 55 family shows per year. Examples of family shows include Disney on Ice, Disney Live, Harlem Globetrotters, and Sesame Street Live. Family show series would typically occur over a five-day block of time (Wednesday through Sunday) during which time as many as 10 total performances would occur in the daytime and evening periods. Estimated average attendance would be approximately 5,000 patrons, and estimated maximum attendance would be approximately 8,200 patrons.
- *Full Arena Concerts:* It is estimated that the event center would host 30 full arena concerts per year. Concerts would typically occur on Friday and Saturday evenings within a 7:30 p.m. to 10:30 p.m. window. Attendance would vary depending on the artist and stage configuration. Estimated average attendance would be approximately 12,500 patrons with a maximum capacity of about 18,500.¹²
- *Arena Theater Concerts:* It is estimated that the event center would host 15 arena “theater” (cut-down arena) concerts per year. Concerts typically occur on Friday and Saturday evenings within a 7:30 p.m. to 10:30 p.m. window. Attendance would vary depending on the artist and cut-down configuration. Estimated average attendance would be approximately 3,000 patrons.¹³
- *Other Sporting Events:* It is estimated that the event center would host 30 non-Warriors sporting events per year. Examples of non-Warriors sporting events include college basketball, hockey, boxing, figure skating, arena football, gymnastics, lacrosse, tennis, and mixed martial arts. These events could be professional, collegiate, or amateur competitions. Estimated average attendance for other sporting events would be 7,000 patrons per event, and estimated maximum attendance of 18,064 (consistent with maximum seating capacity for Warriors games). These events would be distributed throughout the year and have variable start times.
- *Conventions, Conferences and other Events:* It is estimated that the event center would host 31 events annually related to conventions, conferences, cultural events, civic events, corporate events, and other gatherings, with an estimated average attendance level of 9,000 patrons and maximum attendance of 18,500 patrons. For smaller events the event center would be configured to reduce the perceived bowl volume to create a more intimate experience. These events would be distributed throughout the year and have variable start times; however, the majority of events are expected to occur during day time hours, consistent with typical events at the Moscone Convention Center.

It is estimated that day-of-event employees for non-Golden State Warriors events at the event center would range from 675 to 1,000, depending on the specific event and anticipated attendance levels.

(Please see also *Golden State Warriors Operations* and *Office and Retail Uses*, below, for a description of operations and additional employment associated with the Golden State Warriors, and for office and retail uses.)

¹² The event center design would allow for an end-stage concert configuration that would accommodate up to 14,000 patrons. It is estimated that nearly 90 percent of concerts would use the end stage configuration. Occasionally, concerts would occur in a 360-degree center-stage configuration which would accommodate a maximum attendance of approximately 18,500 patrons. However, no more than four center-stage concerts are expected per year.

¹³ The cut-down arena theater design would allow for a concert with up to 4,000 attendees.

Potential Outdoor Events at the Project Site

The proposed Third Street Plaza would provide opportunities for public gatherings and events, such as spring festivals, Cinco de Mayo celebration, summer film series, fall festival/pumpkin patch, and winter tree lighting ceremony/ice skating rink.

Golden State Warriors Operations

The Golden State Warriors organization currently includes approximately 150 full-time equivalent (FTE) employees, and associated operations are based in Oakland. Under the project, all existing Golden State Warriors employees and operations, including management offices and practice facility, would relocate to the project site at Mission Bay. Furthermore, the Golden State Warriors estimate that up to 105 additional FTE employees would be required for year-round event center and site management, for a total estimated Golden State Warriors employment of 255 FTE employees.

Office and Retail Uses

The proposed office uses on the site would be expected to operate similar to other existing office developments within Mission Bay, and is estimated to generate approximately 2,101 FTE employees.¹⁴ The proposed retail uses, including restaurants and other food and beverage service, would operate seven days a week, year-round, independently of the event center operations. It is estimated that the uses within the retail areas would require approximately 372 FTE employees.¹⁵

Transportation Management Plan

As part of the project, the project sponsor would prepare and implement a Transportation Management Plan (TMP) to manage on- and off-site access for all anticipated travel modes (including vehicles, transit, pedestrians, and bicyclists) during project operation for events and activities at the project site. The TMP would identify a range of transportation control strategies for various operational scenarios at the project site, including strategies for non-event and event days; communication strategies for public outreach and wayfinding measures; transportation demand management strategies; and monitoring methods for TMP strategies to ensure effectiveness.

In addition, the project sponsor would participate in the existing Mission Bay Transportation Management Association (TMA) shuttle service program. Sponsor participation in the TMA shuttle service program would allow for potentially expanded Mission Bay TMA shuttle service, as needed during evenings and weekends.

¹⁴ Based on San Francisco Planning Department's Transportation Impact Analysis Guidelines rate of 350/240/350 (Sit-down/QSR/In-line) gross square feet per FTE employee.

¹⁵ Based on San Francisco Planning Department's Transportation Impact Analysis Guidelines rate of 276 gross square feet per FTE employee.

Pre-Construction Testing

Prior to finalizing the project design, in order to inform design and reduce the risk of construction delays due to the potential presence of archaeological resources, the project sponsor is retaining the services of an archaeologist to develop and implement a program of archaeological testing at Blocks 29-32. The results of the archaeological testing will be used to develop a construction monitoring program to ensure potential effects on subsurface archaeological resources would be avoided or minimized prior to the commencement of ground disturbance activities, foundation excavation and pile driving. In addition, the project sponsor will conduct a pile test program at Blocks 29-32 to determine site-specific pile installation methods and requirements.

Construction

Construction of the proposed project is anticipated to begin in late 2015, and occur over an approximate 26-month period. Construction activities would include, but not be limited to: site demolition, clearing and excavation; dewatering; pile installation and foundation construction; construction of all proposed development, including event center, podium structure, office towers and plazas; installation of associated utilities; interior finishing; and exterior hardscaping and landscaping improvements. The sponsor estimates that the maximum depth of excavation on-site would be approximately 30 feet below San Francisco City Datum; this would require approximately 350,000 cubic yards of soils on-site to be excavated and removed from the site. The sponsor proposes alternative methods to pile driving for installation of piles at the project site (e.g., auger pile installation). The sponsor is also considering multiple approaches to address potential groundwater infiltration to proposed below grade facilities and potential localized flooding, including a waterproofing design and implementation of adaptive management strategies. The sponsor indicates the proposed design would preclude the need to conduct any long-term dewatering of the project site during project operation.

The majority of the construction is proposed to occur Monday through Friday, although some construction activities would occur on nights and weekends. A typical work day shift would be between 7:00 a.m. and 6:00 p.m., and a typical second shift (i.e., for below-grade and interior work within buildings) would be between 4:00 p.m. and 12:30 a.m. There would also be the potential for overnight deliveries of materials and/or equipment. All construction activities are proposed to be conducted within allowable construction requirements permitted by City code. The project would also be subject to the Mission Bay Good Neighbor Policy, which limits extreme noise-generating activities in Mission Bay to Monday to Friday from 8:00 a.m. to 5:00 p.m.¹⁶

¹⁶ The Mission Bay Good Neighbor Policy specifies that pile driving or other noise generating activity (80 dBA at a distance of 100 feet) shall be limited to 8:00 am to 5:00 pm, Monday through Friday. No pile driving or other extreme noise generating activity is permitted on Saturday, Sundays and holidays. Requests for pile driving on Saturdays may be considered on a case by case basis by OCII with approval at the sole discretion of the OCII Executive Director.

B. PROJECT SETTING

B.1 Mission Bay

Before 1998, Mission Bay was characterized by low-intensity industrial development and vacant land. Since adoption of the North and South Plans in 1998, Mission Bay has undergone redevelopment into a mixture of residential, commercial (light industrial, research and development, labs and offices), retail, and educational/institutional uses and open space. As of 2014, 4,067 housing units (including 822 affordable units) of the planned 6,400 housing units within Mission Bay (roughly 64 percent) are complete, with another 900 (including 150 affordable units) under construction. Regarding office and laboratory space, approximately 1.7 million square feet of the 4.4 million square feet in the Mission Bay plan area (approximately 39 percent) is complete. Approximately 60 percent of the approved 2.65 million-square-foot UCSF research campus has been developed, including seven research buildings, a campus community center, and a university housing development. The first phase of the UCSF Mission Bay Medical Center is expected to open in early 2015. Construction of the City's new Public Safety Building at Third and Mission Rock Streets is completed and will be operational in early 2015. More than 15 acres of new non-UCSF parks and open space within Mission Bay have also been completed.

B.2 Project Site and Existing Uses

Figure 5 presents an aerial map of the project site vicinity. The approximate 11-acre project site encompasses Blocks 29, 30, 31, and 32 within the Mission Bay South Redevelopment Plan Area. The project site consists of the majority of Assessor's Block 8722, Lot 001, and all of Assessor's Block 8722, Lot 008. The project site is bounded by South Street on the north, Third Street on the west, 16th Street on the south, and by the future planned realigned Terry A. François Boulevard on the east. The City has designated the Mission Bay South Redevelopment Plan Area as a Priority Development Area (PDA). The project site is also located in the southeast corner of the City's South of Market neighborhood, and just north of the City's Potrero Hill and Dogpatch neighborhoods.

The site is relatively level, with the majority of the ground surface elevations ranging between approximately -1 foot to +3 feet San Francisco City Datum (SFD), roughly equivalent to 6½ to 10½ feet above mean sea level. Paved surface metered parking facilities currently operate in the west and north portions of the site. Lot E, accessed from 16th Street, contains 289 parking spaces; and Lot B, accessed from South Street, contains 316 parking spaces, for a total of 605 parking spaces. These parking facilities contain night lighting. Immediately east of, and adjacent to, Parking Lot B is a depressed area (measuring approximately 320 feet by 280 feet) created by an excavation and backfill associated with a prior environmental cleanup of that portion of the site. A surface swale extends west within this portion of the site to allow for drainage of surface water into the depression.¹⁷ Chain link fencing is installed on the perimeter of the project site, and around Parking Lots B and E within the site.

Event Center and Mixed-Use Development at Mission Bay Blocks 29-32

Figure 5
Aerial Photograph of Project Site Vicinity

B.3 Surrounding Uses

The University of California at San Francisco (UCSF) Mission Bay campus is located west, northwest, southwest, and partially south of the project site. Fronting on Third Street directly west of the project site is an eight-story UCSF parking structure (Third Street Garage), and new construction of the UCSF Global Health and Clinical Sciences Building (Mission Hall). To the northwest of the project site fronting along Third Street is UCSF Hearst Tower, a 14-story building containing student housing; and to the north of that, the UCSF Helen Diller Family Cancer Research building. To the southwest of the project site fronting along Third Street is new construction of the UCSF Energy Center, Betty Irene Moore Women's Hospital, Bakar Cancer Hospital and Benioff Children's Hospital. Directly south of the project site across 16th Street, between Third Street and Illinois Street, is a vacant lot recently acquired by UCSF. UCSF is currently preparing a new Long Range Development Plan to guide future campus growth and development at its facilities, including the UCSF Mission Bay campus, through 2035.

Directly south of the project site across 16th Street, between Illinois Street and Terry A. François Boulevard, is a recently-constructed six-story office building (409 Illinois Street) housing Fibrogen Life Science and other biotech/high tech companies, and south of that another recently-constructed six-story office building (499 Illinois Street). Directly north of the project site across and fronting on South Street are (from west to east) a vacant lot (recently acquired by Uber Technologies and Alexandria Real Estate Equities), a six-story parking garage (450 South Street), and a six-story office building housing the Old Navy corporate headquarters. Immediately east of the project site and west of Terry A. François Boulevard are City-owned parcels containing covered stockpiled materials. Further east of the project site across Terry A. François Boulevard is the site of the planned Bayfront Park; this area presently includes a paved trail (which constitutes a segment of the Bay Trail), surface parking lot, and unimproved open space.

Third Street, a north-south major arterial roadway defined as a Transit Important Street in the San Francisco General Plan, extends along the west project site boundary providing access to and from downtown San Francisco to the north and the Bayview neighborhood to the south. Third Street contains two vehicular travel lanes in each direction, separated by a paved median and Muni light rail tracks. Muni light rail lines K-Ingleside and T-Third Street operate along The Embarcadero, with the Muni UCSF/Mission Bay Station located at South Street and the Muni Third & Mariposa Street Station located one block south of the project site. Muni bus routes 91 and T-Owl operate along Third Street, with a Muni bus stop located north of the project site on Third Street. Campus Lane, a two-lane east-west local street, terminates at the intersection with Third Street, directly across from and west of the project site.

16th Street extends east of Third Street along a portion of the south project site boundary, terminating just east of Illinois Street. There are two vehicular travel lanes on 16th Street adjacent to the project site, increasing to four lanes west of Third Street. Bollards installed on 16th Street east of Illinois Street prevent through vehicular travel between Third Street and Terry A. François Boulevard. 16th Street is defined as a secondary arterial west of Third Street in the San Francisco General Plan. 16th Street contains a Class III bicycle route between Illinois Street and Third Street, and two Class II bike lanes west of Third Street. Illinois Street, a two-lane north-south local street, terminates at the intersection with 16th Street, directly across from and south of the project site. Illinois Street contains a Class II bicycle lanes between 16th Street and Mariposa Street.

Terry A. François Boulevard roughly follows the Bay shoreline east of the project site. There are currently two vehicular travel lanes and Class II bicycle lanes in each direction. Terry A. François Boulevard is signed as a Tsunami Evacuation Route.

South Street extends along the north boundary of the project site between Third Street and Terry A. François Boulevard. South Street contains two vehicular travel lanes in each direction. Bridgeview Way, a two-lane north-south local street, terminates at the intersection with South Street, directly across from and north of the project site.

Vehicle parking is currently provided along 16th Street and Terry A. François Boulevard adjacent to the project site.

B.4 Approvals Required

Project approvals or permits from the following agencies for construction or long-term operation are anticipated at this time:

- Approval by the OCII Executive Director of secondary use findings of consistency for the proposed event center
- Approval by the OCII Commission of a new Major Phase for Blocks 29-32
- Approval by the OCII Commission of individual Combined Basic Concept and Schematic Designs (Schematic Designs) for the project
- Approval by the OCII Commission (and any other City departments as required under the Mission Bay South Plan, OPA, Interagency Corporation Agreement, and associated documents) of: Amendments to the Mission Bay South Design for Development, and Modifications to the Mission Bay South Signage Master Plan and Mission Bay South Streetscape Plan
- Approval by Mayor, Department of Public Works Executive Director and OCII Executive Director of any non-material changes to Mission Bay South Infrastructure Plan
- Entertainment Commission approval of applicable entertainment permits, including, but not limited to, a Place of Entertainment permit
- Planning Commission approval of office building Schematic Designs related to Proposition M allocation
- Port of San Francisco staff approval of changes to waterfront infrastructure, including roadway striping
- San Francisco MTA/Department of Public Works approval for reconfiguration of adjacent streets
- San Francisco Department of Public Works and Board of Supervisors approval of subdivision map
- Governor's approval of project sponsor's Assembly Bill 900 (AB 900) application
- San Francisco Public Utilities Commission approvals for connections to infrastructure systems, including water supply, fire flow, recycled water, stormwater, and wastewater systems

C. COMPATIBILITY WITH EXISTING ZONING AND PLANS

	<i>Applicable</i>	<i>Not Applicable</i>
Discuss any variances, special authorizations, or changes proposed to the Planning Code or Zoning Map, if applicable.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Discuss any conflicts with any adopted plans and goals of the City or Region, if applicable.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Discuss any approvals and/or permits from City departments other than the Planning Department or the Department of Building Inspection, or from Regional, State, or Federal Agencies.	<input checked="" type="checkbox"/>	<input type="checkbox"/>

The SEIR will discuss the project's compatibility with existing zoning and plans.

D. SUMMARY OF ENVIRONMENTAL EFFECTS AND APPROACH TO ANALYSIS

D.1 Summary of Environmental Effects

The proposed project could potentially result in either new significant environmental effects or substantially more severe impacts than were previously identified in the Mission Bay FSEIR, as noted by the environmental factor(s) checked below. The resource areas checked below indicate topic areas to be discussed in detail in the SEIR, but all resource areas are addressed in this Initial Study. This section describes the approach to analysis for this Initial Study, and Section E, presents a more detailed checklist and discussion of each environmental factor and the associated impact assessment.

D.2 Approach to Analysis

The following approach to analysis is used in this Initial Study to determine which topics require no additional environmental analysis beyond what is presented in the Mission Bay FSEIR and this Initial Study and which topics require more detailed analysis in the SEIR. With the exception of Aesthetics and parking, the evaluation of environmental impacts is based on potential effects of the proposed project compared to existing (2014) conditions using the significance criteria listed in the San Francisco Planning Department's Initial Study Checklist. Significance criteria that do not apply to the proposed project, if any, are first identified, and neither the Initial Study nor the SEIR provide further discussion of those criteria; for example, since the project is not located within an airport land use plan, none of those criteria apply to this project. Environmental review of Aesthetics and parking impacts are considered pursuant to CEQA Section 21099(d) as discussed in the Aesthetics and Transportation sections of this Initial Study.

Project Impacts

For those topics determined in this Initial Study to be focused out from further analysis in the SEIR, this analysis first summarizes how these topics were addressed in the Mission Bay FSEIR as it related to Blocks 29-32, including identifying any applicable mitigation measures from the Mission Bay FSEIR and conclusions reached regarding significance of effects. Second, the Initial Study analyzes the impacts of the proposed project to determine: (1) if the proposed project, circumstances under which the project is undertaken, or new information (which could not have been ascertained at the time of the preparation of the Mission Bay FSEIR) would lead to new or more severe significant environmental effects from what was identified in the Mission Bay FSEIR; (2) if newly feasible or different mitigation measures or alternatives are available that would substantially reduce one or more significant effects of the project; and (3) if the mitigation measures identified in the Mission Bay FSEIR and/or newly added mitigation measures would reduce impacts to a less-than-significant level. The impact evaluation presents the significance determination for each impact and includes the detailed description of all mitigation measures applicable to the proposed project, whether it is the same as that specified in the Mission Bay FSEIR or an updated mitigation measure.

For those topics to be analyzed in detail in the SEIR, this Initial Study provides the checklist response identifying the potential for new significant impacts or substantially more severe impacts than those identified in the Mission Bay FSEIR. However, the summary of the Mission Bay FSEIR and the detailed analysis of the proposed project are deferred for discussion in the SEIR.

For the purposes of this Initial Study, the checklist questions in Appendix G have been modified to reflect the fact that the proposed project is a subsequent activity under the Mission Bay South Redevelopment program and that this analysis is being tiered from the certified Mission Bay FSEIR as a program EIR, consistent with CEQA Guidelines 15168(c). The four revised checklist questions used in this Initial Study are described below.

1. *Would the project result in potentially significant effects not identified in the prior EIR?* This question examines whether or not the proposed project would result in new significant or potentially significant environmental effects that were not identified in the Mission Bay FSEIR. This could include significant effects that are due to:
 - Project-specific features of the proposed event center and mixed-use development.
 - Substantial changes with respect to the circumstances under which the project would be undertaken, such as real estate development trends in the surrounding area or major projects that were previously unanticipated.
 - New information of substantial importance which was not known and could not have been known at the time the Mission Bay FSEIR was certified, such as newly available information related to climate change or sea level rise.

If the analysis identifies a new significant or potentially significant impact, this Initial Study then determines if either previously identified mitigation measures or newly identified mitigation measures would reduce the impact to less than significant. In this event, the mitigation measures are presented in this Initial Study and no further analysis is required. On the other hand, if a new significant or potentially significant impact is identified and/or further analysis is necessary to

determine if mitigation measures are available to reduce the impacts to less than significant, then this issue will be addressed in further detail in the SEIR.

2. *Would the project result in a potentially substantial increase in severity of a significant impact identified in the prior EIR?* This question examines whether or not the proposed project would result in substantially more severe environmental effects than what was identified in the Mission Bay FSEIR. This increase in severity of a significant effect could be due to:
 - Project-specific features of the proposed event center and mixed-use development.
 - Substantial changes with respect to the circumstances under which the project would be undertaken, such as real estate development trends in the surrounding area or major projects that were previously unanticipated.
 - New information of substantial importance which was not known and could not have been known at the time the Mission Bay FSEIR was certified, such as newly available information related to climate change or sea level rise.

If the project would result in an increase in severity of a previously identified significant impact, this Initial Study then determines if either previously identified mitigation measures or newly identified mitigation measures would reduce the more severe impact to less than significant. In this event, the mitigation measures are presented in this Initial Study and no further analysis is required. On the other hand, if a more severe significant impact is identified and/or further analysis is necessary to determine if mitigation measures are available to reduce the impacts to less than significant, then this issue will be addressed in further detail in the SEIR.

3. *Does the project sponsor decline to adopt a feasible mitigation measure or alternative?* This question addresses the case in which the Initial Study identifies a new significant impact or a substantial increase in severity of a significant impact but the project sponsor has declined to adopt a feasible mitigation measure or alternative. In the event of such cases, if any, the issue will be addressed in further detail in the SEIR.
4. *Would the project result in no new or more severe significant effects?* This question addresses several possible scenarios for certain topics which the Initial Study provides the complete analysis and no further analysis is necessary in the SEIR. These scenarios include the following:
 - The Mission Bay FSEIR identified a significant impact, and the proposed project would result in the same significant impact. In addition, the same mitigation measure identified in the Mission Bay FSEIR would reduce the impact to a less-than-significant level. In this case, the previous mitigation measure as applicable to the proposed project is presented in this Initial Study.
 - The Mission Bay FSEIR identified a significant impact and the proposed project would result in the same significant impact. However, a new or revised mitigation measure is recommended to reduce the impact to a less-than-significant level, and this new measure would replace the previously identified mitigation measure. In this case, only the new mitigation measure is presented in this Initial Study, and the reader is referred to the Mission Bay FSEIR for the original mitigation measure.
 - The Mission Bay FSEIR identified a significant impact and the proposed project would result in the same impact. However, under the current approach to analysis, the impact would be considered less-than-significant due to implementation of actions required to comply with applicable regulations (e.g., hazardous materials regulations). In this case, the revised analysis would supersede the analysis in the Mission Bay FSEIR, and with

compliance with applicable regulations, no mitigation measures are required and none are presented in this Initial Study. The reader is referred to the Mission Bay FSEIR for the original mitigation measure(s).

- The Mission Bay FSEIR identified either no impact or a less-than-significant impact, and the proposed project would also result in no impact or a less-than-significant impact. In this case, no mitigation measures are required and none are presented either in the FSEIR or this Initial Study.
- The Mission Bay FSEIR did not address an environmental topic under the Planning Department's current CEQA Initial Study checklist, and the proposed project would result in a significant impact that could be reduced to less than significant with implementation of a feasible mitigation measure. In this case, the new mitigation measure is presented in this Initial Study.
- The Mission Bay FSEIR did not address an environmental topic under the current Planning Department CEQA Initial Study checklist, but the proposed project would result in either no impact or a less than significant impact. In this case, no mitigation measures are required and none are presented.
- In a few instances, the discussion of why the project is not expected to result in any new or more significant effects is deferred to the SEIR, either as part of a larger discussion (such as Transportation) or for public disclosure.

Cumulative Impacts

Similar to the project impacts, cumulative impacts are analyzed by responding to the same four revised checklist questions but with regard to the potential for the proposed project to contribute to *new* significant cumulative impacts or substantially *more severe* cumulative impacts than those identified in the Mission Bay FSEIR. The Mission Bay FSEIR used the year 2015 for the analysis of the full buildout of the Mission Bay plan as well as for the cumulative impacts analysis, and cumulative impacts were assessed on the basis of regional population and employment projections for the year 2015 as determined by the Association of Bay Area Governments.

A cumulative impact is determined to be significant if the project in combination with other planned, proposed, or probable future conditions in the project vicinity would result in environmental effects that exceed the significance criteria listed in the San Francisco Planning Department's Initial Study Checklist when compared to existing conditions. In addition, the analysis must indicate that the project's incremental effect would be a "cumulatively considerable" contribution to the significant impact. In this Initial Study, the cumulative impact analysis identifies if the proposed project would contribute to a new significant cumulative impact or if a previously-identified cumulative impact would be substantially more severe under the proposed project.

Cumulative impacts for each resource area are analyzed with respect to the appropriate geographic scope for that topic and either (1) a list of past, present, and probable future projects that in combination with the proposed project could contribute to cumulative impacts, or (2) a summary of projections contained in general plan or related planning document (CEQA Guidelines Section 15130(b)(1)). Which of the two methods used varies from topic to topic.

For topics using the list approach, in addition to those projects considered in the Mission Bay FSEIR cumulative analysis, the projects/programs listed below were not anticipated in the Mission Bay FSEIR and are considered in the cumulative impact analysis.

- **University of California at San Francisco (UCSF), 2014 Long Range Development Plan (LRDP), Mission Bay Campus.** UCSF is updating its LRDP to guide future campus growth and development over the next 20 years. The 2014 LRDP updates information that was assumed in the Mission Bay FSEIR. The existing 60.2-acre UCSF Mission Bay campus site is located adjacent to Blocks 29-32, generally bounded by Mission Bay Boulevard South to the north, Owens Street to the west, Mariposa Street to the south, and Illinois and Third Streets to the east. Under the 2014 LRDP, the development capacity for the North Campus is proposed to increase from 2,650,000 to 3,641,800 gsf. The 2014 LRDP proposes to increase the square footage of the North Campus by 1,450,300 gsf, which includes 458,500 gsf of existing remaining entitlement from the 1996 LRDP, plus 991,800 gsf of new entitlement. On the South Campus, construction of a 124,500-gsf cancer outpatient building is anticipated prior to 2035, which will complete Phase 1 of the UCSF Medical Center at Mission Bay. This will bring the total space for Phase 1 to 993,500 gsf. Phase 2 facilities will be located on the west side of the South Campus, across the Fourth Street Public Plaza. Phase 2 Medical Center at Mission Bay is planned for after 2035 as a 261-bed hospital with additional outpatient space, totaling 793,500 gsf. Development of the East Campus would accommodate 500,000 gsf. As a result, the total anticipated development through 2035 with the proposed expansion of the Mission Bay campus site (North, South, and East campuses) would be 5,135,200 gsf.
- **Eastern Neighborhoods Program.** The Eastern Neighborhoods Program included changes in zoning controls and General Plan amendments for an approximately 2,200-acre area on the eastern side of the City. It is intended to encourage new housing while preserving sufficient land for light industrial and service industry (referred to collectively as “Production, Distribution, and Repair,” or “PDR,” uses) in four neighborhoods: the Mission, Showplace Square/Potrero Hill, the Central Waterfront, and the eastern portion of the South of Market (“East SoMa”). In conjunction with the rezoning, the General Plan was amended to include Area Plans for the neighborhoods (including revisions to the existing Central Waterfront and South of Market Area Plans). A key goal of the rezoning process was to encourage the creation of cohesive neighborhoods, particularly where new housing is being encouraged. The plans also propose public benefits and other implementation programs, particularly the creation of affordable housing. The program introduced new zoning districts, including districts that permit at least some PDR uses in combination with commercial uses, districts mixing residential and commercial uses, and areas where only PDR uses would be permitted, with residential use prohibited to alleviate development pressure on PDR uses. The Showplace Square/Potrero Hill Area Plan is located immediately to the west of the Mission Bay Plan (across Interstate 280), the Central Waterfront Area Plan is located immediately to the south of the Mission Bay plan area (south of Mariposa Street), and the East SoMa Area Plan is located immediately to the north (across China Basin and east of Fourth Street). Projects pursuant to the Eastern Neighborhoods Program are currently under construction, including several residential and mixed-used developments south of Mariposa Street.
- **Seawall Lot 337 and Pier 48 Mixed-Use Project (Mission Rock).** This possible future project is located about one-third mile north of Blocks 29-32 on the northeast side of the Mission Bay South Plan area. The project would include a mixed-use, multi-phase waterfront development on Seawall Lot 337, rehabilitation and reuse of Pier 48, and construction of approximately 5.4 acres of net new open space, for a total of 8 acres of open space on the site. Overall, the project would

involve construction of up to approximately 3.7 million gsf of residential, commercial, and retail uses, and a public parking garage on the Project Site. Both Seawall Lot 337 and Pier 48 are owned by the Port of San Francisco. The project is currently in the environmental review phase.

- Pier 70 Mixed-Use Development:** This possible future project is located just under one-half mile south of Blocks 29-32, on 35 acres located south of 20th Street and east of Illinois Street. This project proposes up to approximately 3,040,000 gsf (excluding parking) of above-grade construction in new buildings, and improvements to historic buildings. The project allows for a flexible land use program, including a maximum residential-use and maximum commercial-use scenarios for the Pier 70 Special Use District. Option 1 - maximum residential scenario, would consist of approximately 2,000 dwelling units within 1,605,000 gsf, including up to 904,000 gsf of commercial and office space, plus up to 365,700 gsf of manufacturing, local retail, creative uses and arts which is designated as an "Innovative Industries Zone." Option 2 - maximum office scenario, would consist of approximately 1,052 dwelling units within approximately 903,616 gsf, including up to approximately 1,810,000 gsf of commercial and office space, plus up to 327,700 gsf of manufacturing, local retail, creative uses and arts which is designated as an "Innovative Industries Zone."

E. EVALUATION OF ENVIRONMENTAL EFFECTS

Topics:	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
1. LAND USE AND LAND USE PLANNING— Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial impact upon the existing character of the vicinity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Summary of Land Use Impacts in Mission Bay FSEIR

The land use significance criteria were addressed in the Mission Bay FSEIR in the Land Use section; the Plans, Policies, and Permits section; and the Initial Study Land Use section. Relevant information from these sections is summarized below.

The Mission Bay FSEIR Land Use setting section characterized existing land uses present within and near the Mission Bay plan area at that time. The Mission Bay FSEIR indicated the land uses within Blocks 29-32 at the time of preparation of the FSEIR consisted of industrial and commercial uses, parking facilities and vacant land (see Hazards and Hazardous Materials, below, for a discussion of known historical land uses within Blocks 29-32, and additional detail on specific land uses that existed at the time of preparation of the Mission Bay FSEIR).

While the Mission Bay FSEIR provided CEQA environmental analysis for the entire Mission Bay program, it divided the plan area into subareas to facilitate the analysis. Block 29-32 was located within the East Subarea (the area bounded by existing Terry François Blvd, Mariposa Street, Third Street, and Mission Bay Boulevard South). Development of this subarea was assumed to include commercial industrial and office; entertainment-oriented, neighborhood- and City-serving retail; and public open space land uses. Buildings in the subarea would be allowable up to 90 feet in height, with 7 percent of the developable area allowable up to 160 feet high (along Third Street). Buildings along the future realigned Terry A. François Boulevard would be restricted to 90 feet in height.

The Mission Bay FSEIR Initial Study Land Use section determined that the Mission Bay plan area was a largely underutilized industrial area with no established residential community; this was the basis for the Mission Bay FSEIR finding that the Mission Bay plan would not physically disrupt or divide an established community.

The Mission Bay FSEIR Plans, Policies and Permits section compared the Mission Bay plan and its implementing plans to other City plans, policies and regulations. The Mission Bay FSEIR indicated that the Mission Bay Redevelopment Plans and Design for Development documents would constitute the regulatory land use framework for the Mission Bay plan area, and would supersede the City's Planning Code (except where indicated in those implementing documents), and furthermore, the Redevelopment Plans would be required to be found consistent with the City General Plan prior to adoption. The Mission Bay FSEIR also acknowledged that certain development activities proposed within the Mission Bay plan area would be subject to applicable regional, State and/or federal permitting authority. The Mission Bay FSEIR analyzed the physical environmental impacts of potential policy conflicts for specific environmental topics, such as transportation and noise, in the respective sections of the FSEIR.

The Mission Bay FSEIR Land Use impacts section indicated that the Mission Bay project would result in a substantial change in the type and intensification in land uses in the Mission Bay plan area, involving demolition of most existing buildings and displacement of existing uses within the Mission Bay plan area, and development of the proposed mixed-use land use program over the build-out period. The Mission Bay FSEIR reported that the Mission Bay plan would continue the trend that was occurring in other nearby areas of the City (e.g., South of Market) of redeveloping former industrial areas into residential and commercial neighborhoods. The Mission Bay FSEIR reported that the commercial industrial/retail uses proposed within the East Subarea of the Mission Bay plan area, which includes Blocks 29-32, would be compatible with the medical research and instructional uses proposed within the adjacent proposed UCSF campus subarea (located west of the Blocks 29-32 across Third Street).

The Mission Bay FSEIR also acknowledged that construction activities associated with development of the proposed uses within the Mission Bay plan area would create construction-related effects (e.g., dust, noise, traffic) that may be noticeable and annoying to new residents within the Mission Bay plan area, however, with implementation of mitigation measures identified in the respective sections of the Mission Bay FSEIR, those effects would be mitigated to a less-than-significant level. These factors provided the basis for the Mission Bay FSEIR finding that the Mission Bay plan would not have a significant impact upon the existing character of the vicinity.

In summary, the Mission Bay FSEIR identified no significant impacts on land use from the Mission Bay plan, and accordingly, did not require any mitigation measures related to land use effects.

Impact Evaluation

Physical Division of an Established Community

Impact LU-1: The proposed project would not physically divide an established community. (Less than Significant)

Surface metered parking facilities currently operate in the west and north portions of the site, and a chain-link fence restricts access to the remainder of the site. During construction of the proposed project, the existing surface parking lot uses at the project site would be removed. Although the specific construction details have not yet been determined, the project may require temporary closure of lane(s) along Third Street, South Street, 16th Street and/or Terry A. François Boulevard during construction. Since these closures would be temporary, and alternate routes would be provided as needed, project construction would not physically divide the surrounding established community.

The proposed project would result in the construction and operation of an event center, office and retail uses, parking facilities and open space areas within Blocks 29–32. The proposed project would be incorporated within the established street plan, including realignment of Terry A. François Boulevard, and would not create an impediment to the passage of persons or vehicles. The proposed project design does not include any physical barriers or obstacles to circulation that would restrict existing patterns of movement between the project site and the surrounding neighborhood. To the contrary, the project would include a number of features designed to encourage and promote public access and circulation. For example, the project would include a 20-foot setback along the 16th Street frontage that would serve as a connector to the Bayfront Park, as shown in the Mission Bay South Design for Development document.

During events, particularly at the end of basketball games or other events when the peak flow of patrons would exit the project site, the project would involve implementation of transportation management measures. These measures could result in periodic disruption or division of the physical arrangements of existing surrounding rights-of-way through event-related street or lane closures, sidewalk restrictions, or transit reallocation. These impacts would be limited to a few hours before and/or after events, and they would be intended to most efficiently facilitate the flow of people and vehicles away from the project site, thereby enhancing connections as opposed to increasing divisions.

Given that the proposed project and uses would occur within the boundaries of the existing lot lines and no physical barriers to movement through the community would be involved, the construction and operation of the proposed uses would not result in any new impacts, or increase the severity of previously-identified impacts, related to physical division of an established community.

At the time of preparation of the Mission Bay FSEIR, several buildings and facilities were located and operating on the project site. These buildings and structures were subsequently removed, and the project site has been subject to grading, some excavation, and construction of paved surface parking lots, fencing and associated utilities. This change in conditions on the project site has not altered the fact that the site is within the established street plan.

As discussed above, the Mission Bay FSEIR did not identify a significant impact related to physical division of an established community because the surrounding community contained no residential uses.

As discussed above under Section B.3, Surrounding Uses, the area surrounding the project site has been partially developed since preparation of the FSEIR. The UCSF Mission Bay campus is located west, northwest, southwest, and partially south of the project site, including the UCSF Hearst Tower, a 14-story building containing student housing located northwest of the project site. Office buildings are also located north and south of the project site. In addition, as described above under "Approach to Analysis," the updated UCSF LRDP indicates plans for further development of about 1.46 million gsf of new space at the Mission Bay campus.

These changes in land uses surrounding the project site would not affect the determination whether the proposed event center and mixed-use development within the project site would physically divide an established community. As stated above, development would be undertaken within the existing property lines, and the project would facilitate pedestrian movement through the project site. The proposed project would be adjacent to the UCSF Mission Bay campus but would not physically divide the campus. Therefore, there have been no substantial changes with respect to circumstances under which the project is undertaken nor has any new information become available that will result in new or more severe impacts associated with the proposed project.

As discussed above, the Mission Bay FSEIR did not identify any significant impacts related to physical division of an established community, and accordingly, did not require any mitigation measures. Furthermore, the Mission Bay FSEIR did not identify any alternatives to reduce impacts related to physical division. Consequently, no new or different mitigation measures or alternatives to reduce project impacts related to physical division of an established community are identified or required with respect to the currently proposed project.

On the basis of the factors discussed above, the project would not have any new or substantially more severe effects than those identified in the Mission Bay FSEIR related to physical division of an established community.

Land Use Plan or Policies

Impact LU-2: The proposed project would not conflict with any applicable land use plans, policies or regulations of an agency with jurisdiction over the project adopted for the purpose of avoiding or mitigating an environmental effect. (Less than Significant)

As stated above, the Mission Bay FSEIR indicated that the Mission Bay Redevelopment Plans and Design for Development documents would constitute the regulatory land use framework for the Mission Bay plan area. The Mission Bay FSEIR analyzed the physical environmental impacts of potential policy conflicts for specific environmental topics, such as transportation and noise, in the respective sections of the FSEIR.

The proposed project would not obviously conflict with applicable land use plans or policies, including the San Francisco General Plan, with San Francisco Planning Code provisions that apply to the project, or with the Mission Bay South Redevelopment Plan, under which the proposed office and retail uses are considered primary uses, and the proposed event center is considered a secondary use. In addition, the proposed project would be generally consistent with the major development standards of the Design for Development for the Mission Bay South Project Area. However, due to the unique nature of the event

center component of the project, the sponsor intends to seek OCII approval of variations or amendments to some of these standards (see above, Section B.4, Approvals Required).

The project would not substantially conflict with regional plans or policies, including *Plan Bay Area*, the 2010 Clean Air Plan, *San Francisco Bay Plan*, and the *San Francisco Basin Plan*. Aside from land use effects, the physical environmental impacts of potential policy conflicts are addressed in the applicable sections of this Initial Study, including biological resources; the SEIR will provide detailed analysis of the physical environmental impacts of potential policy conflicts for the remaining resource areas, such as transportation and noise.

As part of the project approval process, OCII, the San Francisco Planning Commission, and other relevant regulatory agencies would determine whether the proposed project is consistent with their respective plans as applicable to the proposed project. Thus, the proposed project would have a less-than-significant impact with regard to conflicts with land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect.

Since publication of the Mission Bay FSEIR, there have been three notable changes related to the applicable land use plans or policies associated with the project site: revisions to the South Design for Development; change in jurisdictional agency; and the update to the UCSF LRDP. As discussed in Section A.2, Background, above, the Redevelopment Agency/OCII has prepared nine addenda to the Mission Bay FSEIR, between 2000 and 2013. Only the 2004 addendum addressed changes to land use plans or policies applicable to the project site at Blocks 29-32. That addendum analyzed revisions to the South Design for Development regarding towers, tower separation, and setbacks. The unique nature of the proposed event center would require the sponsor to receive OCII approval of variations or amendments to some of these standards, which would occur as part of the project approval process.

As stated in the Project Description, in accordance with California Community Redevelopment Law, when the Board of Supervisors approved the South Plan in 1998, land use and zoning approvals within Mission Bay came under the jurisdiction of the Redevelopment Agency. However, with dissolution of redevelopment agencies statewide, and subsequent state and local legislation creating the Successor Agency, OCII now has jurisdiction and approval authority over the land use and zoning of the project site. This change in jurisdiction would not result in new or more severe impacts related to conflict with land use plans.

As stated above, under Section D, Approach to Analysis, under the UCSF 2014 LRDP 1,450,300 million gsf of new space is proposed on the North Campus (north of 16th Street) which includes 458,500 gsf of existing remaining entitlement from the 1996 LRDP, plus 991,800 gsf of new entitlement. On the North Campus, the 2014 LRDP calls for the same mix of research, support, parking, and open space uses as was analyzed in the Mission Bay FSEIR, but with some land use changes to undeveloped parcels. In particular, the 2014 LRDP calls for new housing on Mission Bay Boulevard South, at Sixth Street. On the South Campus, construction of a 124,500-gsf cancer outpatient building is anticipated prior to 2035, which will complete Phase 1 of the UCSF Medical Center at Mission Bay. This will bring the total space for Phase 1 to 993,500 gsf. On the South Campus, the Mission Bay FSEIR analyzed development of the blocks south of 16th Street with commercial-industrial and retail uses. The development of these blocks with UCSF clinical uses was previously analyzed in the 2008 addendum, as stated in the Project Description.

The clinical land uses called for in the 2014 LRDP would be consistent with the uses analyzed in 2008. Development of the East Campus would accommodate 500,000 gsf, plus 500 parking spaces, and pursuant to the LRDP the site would be functionally zoned for research and parking use. The site is intended to serve as a consolidation location for UCSF, for both owned and leased properties, to reduce costs and improve efficiencies. In the Mission Bay FSEIR, this site is analyzed for development of Commercial Industrial uses to facilitate the development of research and development, biotechnical, semi-conductor research, telecommunications, business or multimedia services, and related light industrial uses. The proposed UCSF uses would be consistent with that land use designation as either primary or secondary use.

None of the changes in land use proposed in the 2014 LRDP would change the regulatory controls on the Blocks 29–32 project site. Moreover, the changes in land use would be limited to specific parcels (notably, the new housing site at Sixth Street, as well as a future research site on Owens Street) that—due to their relative distance from the Blocks 29–32 project site—would not present land use conflicts with the proposed project. Implementation of the 2014 LRDP would intensify research, clinical, housing, and medical office uses east and southeast of the Blocks 29–32 project site, but this intensification would not result in new or more severe land use impacts than those analyzed in the Mission Bay FSEIR.

Therefore, there have been no substantial changes with respect to circumstances under which the project is undertaken nor has any new information become available that would result in new or more severe impacts associated with the proposed project.

As discussed above, the Mission Bay FSEIR did not identify any significant impacts related to a conflict with land use plans or policies adopted for the purpose of avoiding or mitigating an environmental effect, and accordingly, did not require any mitigation measures. Furthermore, the Mission Bay FSEIR did not identify any alternatives to reduce conflict with land use plans or policies. Consequently, no new or different mitigation measures or alternatives to reduced project impacts related to conflict with land use plans or policies are identified or required with respect to the currently proposed project.

On the basis of the factors discussed above, the project would not have any new or substantially more severe effects than those identified in the Mission Bay FSEIR related to conflict with land use plans or policies adopted for the purpose of avoiding or mitigation an environmental effect.

Existing Character of the Vicinity

Impact LU-3: The proposed project would not have a substantial impact upon the existing character of the vicinity. (Less than Significant)

As discussed above, the Mission Bay FSEIR indicated that the commercial industrial/retail uses proposed within the east subarea of the Mission Bay plan area (which includes Blocks 29–32) would be compatible with the medical research and instructional uses proposed within the adjacent proposed UCSF campus subarea (located west of the Blocks 29–32 across Third Street).

Examples of potential Mission Bay plan research/light industrial/office land uses for the project site can include research and development, biotechnical or semiconductor research, telecommunications, business services, multimedia services, related light industrial uses, and commercial offices. Potential retail uses

for the site can include city-serving retail uses, and neighborhood-serving retail within ground-floor spaces. Secondary uses could include institutions and assembly and entertainment (nighttime entertainment and recreation building).

The proposed project would result in the construction and operation of an event center, office and retail uses, parking facilities and open space areas within the project site. The retail and office uses would be generally consistent with the previously proposed uses for the site, such that no new or more severe conflicts with land use character would occur.

The proposed event center uses are considered “nighttime entertainment uses” and would be similar to the secondary “nighttime entertainment” uses previously analyzed in the Mission Bay FSEIR. On event days, the project’s event component would attract spectators/attendees, as well as additional visitors to the other restaurant and retail uses. Although this entertainment use was addressed in the FSEIR, the size and intensity of the event center use was not previously analyzed.

Once completed, the proposed project would function as a destination site, with an intensification of use during events. Attendance at these events would alter the overall land use character of the project site from that analyzed in the FSEIR. As discussed in the Project Description, Golden State Warriors basketball games, large concerts, other sporting events and conventions would have average attendance ranging between approximately 7,000 and 18,000 people. Basketball games and concerts would typically occur during the evening hours, and conventions would generally occur during daytime hours. The facility would also host family shows, and smaller concerts with attendance ranging between 3,000 and 8,200 people during the daytime and evening hours. The outdoor plaza would be used for occasional outdoor gatherings and events.

The presence of event spectators/attendees on streets and sidewalks in the vicinity of existing uses would be noticeable compared to existing conditions. Events would also attract people to local restaurant, retail, and open space uses of the wider neighborhood. Similar to operation of such uses in proximity to AT&T Park during a Giants game, local restaurants, retail businesses, and open spaces would be more heavily patronized than under existing conditions, but they would continue to operate as intended.

Although the presence of these attendees on streets and sidewalks in the vicinity of medical research, clinic, and office uses in the surrounding Mission Bay neighborhood would be noticeable compared to existing conditions, these additional people would not impede the operation of those existing uses such that adverse land use impacts would occur. Each use would continue to function as intended. The effects of event center operation on the local transportation network, noise, and air emissions on the surrounding neighborhood will be addressed in the SEIR.

Basketball games and other planned events such as concerts would occur generally after commercial and medical office hours of nearby uses. Although the UCSF Medical Center would be a 24-hour use, hospital uses are generally more intensive during standard medical office hours. Moreover, there is nothing about the event center that would preclude operation of those uses. Therefore, although event center operations are expected to result in an incremental increase in localized traffic, noise, and air pollutant emissions, the uses in the project site vicinity would continue to function as intended.

On the basis of the factors discussed above, the project would not have any new or substantially more severe effects than those identified in the Mission Bay FSEIR related to conflict with existing land use character.

At the time of preparation of the Mission Bay FSEIR, the project site vicinity was occupied by a mix of warehouses used for light industrial, commercial, and office uses, as well as truck terminals, truck yards, gravel processing facilities, and expanses of undeveloped land. On the nearby waterfront were the Port's Maintenance Operations Facilities at Pier 50, the public boat launch ramp between Piers 52 and 54, yacht and boat clubs at Piers 50½, 52, and 54, and Agua Vista Park north of 16th Street.

Since preparation of the Mission Bay FSEIR, large portions of the Mission Bay plan area have been built out. The UCSF Mission Bay campus is located west, northwest, southwest, and partially south of the project site, and it currently includes a mix of parking structures, office buildings, research buildings, student housing, and hospital buildings. Other office buildings and vacant lots are located north and south of the site, and immediately east of the site are City-owned parcels containing covered stockpiled materials. The area of the proposed Bayfront Park currently includes a paved trail, surface parking lot, and unimproved open space.

These changes in conditions in land use character surrounding the project site would not result in new or more severe impacts on the existing character of the vicinity. Operation of the proposed office, entertainment, and retail uses would not conflict with the changed land use character. To the contrary, as stated above, the proposed project would be compatible with the existing character of the medical campus, office, and research-and-development uses in the project site vicinity. Therefore, there have been no substantial changes with respect to circumstances under which the project is undertaken nor has any new information become available that will result in new or more severe land use impacts associated with the proposed project.

As discussed above, the Mission Bay FSEIR did not identify any significant impacts upon the existing character of the vicinity, and accordingly, did not require any mitigation measures. Furthermore, the Mission Bay FSEIR did not identify any alternatives to reduce impacts upon the existing character of the vicinity. Consequently, no new or different mitigation measures or alternatives to reduced project impacts to land use character are identified or required with respect to the currently proposed project.

On the basis of the factors discussed above, the project would not have any new or substantially more severe impacts upon the existing character of the vicinity.

Cumulative Impacts

Impact C-LU-1: The proposed project, in combination with past, present, and reasonably foreseeable future projects, would not result in significant cumulative impacts to land use. (Less than Significant)

The geographic scope for potential cumulative impacts related to land use generally includes the South Mission Bay Plan Area, as well as the immediately adjacent Eastern Neighborhoods Plan areas (i.e., the Central Waterfront and Showplace Square/Potrero Hill Area Plans), Seawall Lot 337/Pier 48 Mixed-Use project, and Pier 70 project (as discussed above under Section D, Approach to Analysis). Other reasonably foreseeable projects within the project vicinity with the potential to contribute to cumulative, land use

impacts would be required to undergo separate environmental review, as necessary, and to identify mitigation measures for any significant impacts. Cumulative impacts on land use could result if the proposed project, in combination with other reasonably foreseeable projects in the vicinity, would collectively increase the potential for significant impacts.

Other projects within the Mission Bay South Plan Area would be built consistent with the Mission Bay South Plan and Mission Bay South Design for Development within the lot lines of existing streets, within an area of the City with a low residential population, and therefore would not be expected to physically divide an established community. Projects built pursuant to the Eastern Neighborhoods Area Plans would generally be constructed in areas with a mix of uses and higher residential population than the Mission Bay South Plan Area, but these projects would also be constructed within the existing street grid, and their operation would not physically divide an established community. The Pier 70 project, which is encompassed within the boundaries of the Eastern Neighborhoods Central Waterfront Area Plan, would be built entirely east of Illinois Street, as well as primarily south of 20th Street. The project would result in the construction of new streets and the extension of existing streets, as well as new parks and open space for pedestrian and cyclist access. Similarly, the Seawall Lot 337 and Pier 48 Mixed-Use Project would be built within existing lot lines east of Third Street, and create new access routes through the site. These projects would not physically divide an established community.

Cumulative developments in the Mission Bay South Plan Area would be required to generally conform to the Mission Bay South Plan land use designations and Mission Bay South Design for Development height, bulk, and developable area standards. Similarly, cumulative developments in the Showplace Square / Potrero Hill and Central Waterfront Plan Areas (including the Pier 70 project), would be required to conform to the land use controls of the Eastern Neighborhoods Rezoning and Area Plans. The Seawall Lot 337 and Pier 48 Mixed-Use Project would be subject to the Port of San Francisco land use controls, including the Waterfront Land Use Plan, and the Bay Conservation and Development Commission's San Francisco Bay Plan.

The Seawall Lot 337 and Pier 48 Mixed-Use Project is located about one-half mile north of Blocks 29-32 on the northeast side of the Mission Bay South Plan area. The project would include a mixed-use, multi-phase waterfront development on Seawall Lot 337, rehabilitation and reuse of Pier 48, and construction of approximately 5.4 acres of net new open space, for a total of 8 acres of open space on the site. Overall, the project would involve construction of up to approximately 3.7 million gsf of residential, commercial, and retail uses, and a public parking garage on the Project Site. Both Seawall Lot 337 and Pier 48 are owned by the Port of San Francisco. The project is currently in the environmental review phase. Therefore, in combination, these projects would not be anticipated to substantially conflict with land use plans and policies adopted for the purpose of avoiding an environmental effect.

Build-out of the remainder of the Mission Bay South Plan Area, the Eastern Neighborhoods Area Plans, the Seawall Lot 337 and Pier 48 Mixed-Use Project, and the Pier 70 project would result in an overall intensification and diversification of land uses in this area of the City. In particular, the Mission Bay South area and its surroundings is currently partially developed and partially occupied by vacant or underutilized parcels. New higher-density residential, commercial office, research-and-development, and medical uses in the Mission Bay South Plan Area, as well as in parcels south of the plan area, would complement the commercial office, research-and-development, and medical office developments completed to date. The

land use impacts of buildout of the Mission Bay South Plan Area were included in the cumulative impacts analysis of the Eastern Neighborhoods EIR. Regarding projects in the Eastern Neighborhoods plan areas, introduction of more residential, commercial, and mixed-use buildings in the Central Waterfront and Showplace Square / Potrero Hill plan areas, would alter the land use character of these areas. The effects of these land use changes have been analyzed and disclosed in the Eastern Neighborhoods EIR. The Pier 70 project and Seawall Lot 337 and Pier 48 Mixed-Use Project would introduce new commercial office, residential, and retail spaces, as well as recreational open spaces. The land use impacts of these projects will be analyzed in each project’s environmental review, currently under way.

These projects would combine with the proposed commercial office, retail, entertainment, and open space uses at Block 29–32 to create a wider mix of uses than currently exists in this portion of the City. Although this would represent a change in land use character, the combined effect would not be adverse. Each use would still function as intended, and many of the uses would be complementary. Thus, the proposed project in combination with existing and planned future developments in the vicinity would not combine to result in significant adverse cumulative effects to land use character.

Therefore, cumulative land use impacts would be less than significant.

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area or which would substantially impact other people or properties?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Senate Bill 743 and CEQA Public Resources Code Section 21099

On September 27, 2013, Governor Brown signed Senate Bill (SB) 743 (Chapter 386 of the 2013 California Legislation Session), which became effective on January 1, 2014.¹⁸ Among other provision, SB 743 amends the California Environmental Quality Act (CEQA) by adding Public Resources Code Section 21099 regarding analysis of aesthetics (and parking) impacts for urban infill projects.

¹⁸ SB 743 can be found on-line at: http://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201320140SB743.

Aesthetics (and Parking) Analysis

Public Resources Code Section 21099(d), effective January 1, 2014, provides that, “aesthetics and parking impacts of a residential, mixed- use residential, or employment center project on an infill site located within a transit priority area shall not be considered significant impacts on the environment.” Accordingly, aesthetics and parking are no longer to be considered in determining if a project has the potential to result in significant environmental effects for projects that meet the following three criteria:

- The project is in a transit priority area;¹⁹ and
- The project is on an infill site;²⁰ and
- The project is residential, mixed-use residential, or an employment center.²¹

The proposed project meets each of the above three criteria because it (1) is located in proximity to several transit routes; (2) is located on an infill site that has previously been developed with industrial and commercial uses and is surrounded by areas of either recently completed or planned urban development; and (3) would be an employment center supporting a range of commercial uses, located in proximity to several transit routes, and in an urban area on a site already developed and zoned for commercial uses with a floor area ration (FAR) greater than 0.75.²² Thus, this Initial Study and the SEIR do not consider aesthetics (or parking) in determining the significance of project impacts under CEQA.

Nevertheless, Public Resources Code Section 21099(d)(2)(A) states: “This subdivision does not affect, change, or modify the authority of a lead agency to consider aesthetic impacts pursuant to local design review ordinances or other discretionary powers provided by other laws or policies.” Consequently, all applicable City urban design standards and guidelines governing the project site and proposed project, including the Mission Bay South Redevelopment Plan, Mission Bay South Design for Development, and Mission Bay South Signage Plan would apply to the proposed project. Furthermore, the project would be subject to all applicable design review approvals, including Major Phase approval by OCII, and Schematic Designs for each building and private open spaces, which would consider relevant design and aesthetic issues.

Public Resources Code Section 21099(d)(2)(B) states: “For the purposes of this subdivision, aesthetic impacts do not include impacts on historical or cultural resources.” Please refer to Cultural Resources, below, for an assessment of potential project impacts on historic and cultural resources. Environmental effects of lighting on birds are addressed under Biological Resources.

¹⁹ Public Resources Code Section 21099(a) defines a “transit priority area” as an area within one-half mile of an existing or planned major transit stop. A “major transit stop” is defined in Section 21064.3 of the California Public Resources Code as a rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.

²⁰ Public Resources Code Section 21099(a) defines an “infill site” as a lot located within an urban area that has been previously developed, or a vacant site where at least 75 percent of the perimeter of the site adjoins, or is separated only by an improved public right-of-way from, parcels that are developed with qualified urban uses.

²¹ Public Resources Code Section 21099(a) defines an “employment center” as a project located on property zoned for commercial uses with a floor area ratio of no less than 0.75 and located within a transit priority area.

Topics:	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
3. POPULATION AND HOUSING— Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Displace substantial numbers of existing housing units or create demand for additional housing, necessitating the construction of replacement housing?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Summary of Population and Housing Impacts in Mission Bay FSEIR

The Mission Bay FSEIR Business Activity, Employment, Housing and Population setting section characterized existing business and employment conditions that were present within the Mission Bay plan area, nearby areas, the City as a whole, and the region at that time. The Mission Bay FSEIR indicated there were approximately 95 existing establishments within the Mission Bay plan area providing jobs for an estimated 1,670 workers at the time of preparation of the Mission Bay FSEIR. There were no residential units or permanent residents within the Mission Bay plan area at that time.

The Mission Bay FSEIR Business Activity, Employment, Housing and Population impacts section estimated employment by land use within the Mission Bay plan area at build-out. The Mission Bay FSEIR projected that total employment associated with the Mission Bay plan would generate approximately 30,000 jobs at build-out. Of that, uses proposed under the UCSF Long Range Development Plan were estimated to account for 30 percent of the future employment within the Mission Bay plan area; office uses would account for 29 percent; research and development would account for 22 percent; retail would account for 14 percent; and hotel, public facilities, housing and other miscellaneous uses would account for the remaining 6 percent. The Mission Bay FSEIR also indicated construction related to the Mission Bay plan would be a source of construction jobs for many years, estimated at an average of approximately 1,000 full-time construction jobs per year.

The Mission Bay FSEIR determined that development proposed under the Mission Bay plan could displace certain existing businesses. However, it noted that virtually all remaining existing businesses operating within Mission Bay plan area at that time were either on short-term leases or on a long-term lease that would expire soon. Furthermore, the Mission Bay FSEIR determined that most of those businesses would be able to relocate to alternative locations either elsewhere in or outside the City.

The Mission Bay FSEIR estimated that the Mission Bay plan would create approximately 6,100 housing units and 5,900 households and increase population by 10,900 (no housing was proposed within Blocks 29-32), and create approximately 6,900 employed residents within the Mission Bay plan area at build-out. The Mission Bay FSEIR estimated that the housing demand created by the planned employment growth of the Mission Bay plan would exceed the housing supply proposed within the Mission Bay plan area by

approximately 3,700 units. The Mission Bay FSEIR estimated this offset would be accommodated by housing elsewhere in and outside the City. The Mission Bay FSEIR addressed the potential for the plan's jobs/housing imbalance to result in environmental impacts (e.g., transportation and air quality effects from longer commute distances), to be addressed in the corresponding sections in the FSEIR.

In summary, the Mission Bay FSEIR identified no significant impacts to business activity, employment, housing and population from the Mission Bay plan, and accordingly, did not require any mitigation measures related to plan effects on population and housing.

Impact Evaluation

Construction Impacts

Impact PH-1: Construction of the proposed project would not induce substantial growth in the area, either directly (for example, by constructing new homes or businesses) or indirectly (for example, through extension of roads or other infrastructure). (Less than Significant)

Project construction is estimated to last approximately 26 months. Several hundred construction workers would be required to construct the entire project, although the number of construction workers present on-site daily would range considerably, depending on the specific construction activities being performed and overlap between construction phases.

San Francisco and the five-county subregion of San Francisco, Alameda, Contra Costa, Marin and San Mateo Counties experienced persistently high unemployment in recent years. The construction sector was particularly affected by the 2007-2008 mortgage crisis and subsequent recession. Between 2007 and 2010, construction jobs in the five-county region declined by nearly 38,000 jobs, or about a third, over this period. However, the trend for the five counties as a whole began to reverse in 2011, with a net increase of about 520 construction jobs in the five-county region that year. Construction job growth has continued, and between 2010 and July 2014, more than 22,700 construction jobs were added in the five-county region. Therefore, as of July 2014, the net loss in construction employment in the five-county region since 2007 stands at about 15,000 jobs.²³

Given the continuing population of unemployed construction workers, as well as the project being subject to OCII's workforce development program (which includes goals to hire local workers for construction), nearly all project construction labor needs would readily be met by current residents of San Francisco and the rest of the five-county region. Therefore, the project would not result in any new significant construction-related impacts, or increase the severity of previously-identified construction impacts, to population growth. Furthermore, there have been no substantial changes with respect to circumstances under which the project is undertaken nor has any new information become available that will result in new or more severe construction-related impacts to population growth associated with the proposed project.

²³ California Employment Development Department, Labor Market Information, California Regional Economies Employment Series (CREE), 2014.

The Mission Bay FEIR and FSEIR did not specifically address potential indirect impacts to population growth related to extension of roads or other infrastructure. However, the project would not involve the extension of roads or other infrastructure except to the project site itself, at a location already well served by roads and other infrastructure, including previously approved improvements to roads and infrastructure associated with overall Mission Bay plan development. Consequently, the construction-related indirect impacts on population growth associated with the proposed project would be less than significant.

The Mission Bay FSEIR did not identify any significant construction-related impacts to population growth, and accordingly, did not require any mitigation measures for this impact. Furthermore, the Mission Bay FSEIR did not identify any alternatives to reduce construction-related impacts to population growth. Consequently, no new or different mitigation measures or alternatives to reduce project construction impacts to population growth are identified or required with respect to the currently proposed project.

Impact PH-2: Construction of the proposed project would not displace existing housing units or create substantial demand for additional housing. (Less than Significant)

No housing existed on Blocks 29-32 at the time the Mission Bay FSEIR was prepared, and no housing was planned for the project site under the Mission Bay plan. Consequently, implementation of the Mission Bay plan did not displace any existing housing units on the project site, and the proposed project on Blocks 29-32 would not change that condition. Furthermore, there are no circumstances under which the project would be undertaken that would change that condition, and the project's impacts on displacement of housing units or creation of substantial demand for additional housing would be less than significant.

The Mission Bay FSEIR did not identify any significant construction-related impacts to housing demand, and accordingly, did not require any mitigation measures for this impact. Furthermore, the Mission Bay FSEIR did not identify any alternatives to reduce construction-related impacts to displacement of housing. Consequently, no new or different mitigation measures or alternatives to reduce project construction impacts to housing demand are identified or required with respect to the currently proposed project.

Impact PH-3: Construction of the proposed project would not displace substantial numbers of people, necessitating the construction of replacement housing elsewhere. (Less than Significant)

As was anticipated by the Mission Bay FSEIR, all commercial and industrial uses that existed on the project site at the time of preparation of the Mission Bay FSEIR have since been removed, and their associated businesses displaced and/or relocated to other locations. Presently, the only business operating on the project site are two metered parking lots (Lots B and E) that were developed subsequent to the removal of the prior land uses. These parking facilities use fully-automated pay stations, so no workers are required for daily lot operations (other than potential daily pass-bys that may occur from employees servicing the pay stations). Consequently, the project is not expected to displace any on-site workers, or necessarily result in any reduction of employment for the parking company that owns and operates the parking lots, and impacts would be less than significant.

Therefore, project construction would not result in any new significant impacts, or increase the severity of previously-identified construction impacts, to displacement of people or need for replacement housing. Furthermore, there have been no substantial changes with respect to circumstances under which the project is undertaken nor has any new information become available that will result in new or more severe construction-related impacts to displacement of people or need for replacement housing associated with the proposed project.

The Mission Bay FSEIR did not identify any significant construction-related impacts to displacement or people or need for replacement housing, and accordingly, did not require any mitigation measures. Furthermore, the Mission Bay FSEIR did not identify any alternatives to reduce construction-related impacts to displacement or people or need for replacement housing. Consequently, no new or different mitigation measures or alternatives to reduce project construction impacts to displacement or people or need for replacement housing are identified or required with respect to the currently proposed project.

Operational Impacts

Impact PH-4: Operation of the proposed project would not induce substantial population growth in the area, either directly (for example, by constructing new homes or businesses) or indirectly (for example, through extension of roads or other infrastructure). (Less than Significant)

Table 2 summarizes the estimated permanent jobs that would result from project implementation. The Golden State Warriors, and office and retail development would employ an estimated 2,728 FTE workers at the project site. Of these, approximately 150 FTE employees would be existing Warriors staff who are currently employed in the Bay Area (Oakland); their jobs would therefore not be considered new Bay Area employment generated by the project. Thus, about 2,578 FTE workers would be employed at new jobs attributable to the project. In addition, the jobs for day-of-game/event staff at the event center are conservatively assumed to be all new.²⁴ Depending on the type of game/event at the event center, between 675 and 1,000 non-Warriors workers would be needed to staff the event center. Thus, the project would create a total of up to approximately 3,578 new jobs.

The estimated total 3,578 new jobs created by the project would incrementally further increase the jobs/housing imbalance that was described for the Mission Bay plan area in the Mission Bay FSEIR. However, similar to that discussed in the Mission Bay FSEIR, the estimated slight increase in this offset created by the project would be accommodated by housing elsewhere in and outside the City.

It should be noted there were 27,900 unemployed workers living in San Francisco in 2013 and 154,700 unemployed workers in the five-county region, out of a total labor force of about 487,000 and 2.35 million, respectively. The approximately 3,578 total new jobs generated by the project would represent about 0.7 percent of San Francisco's current labor force and 0.2 percent of the labor force in the five-county region.

²⁴ It is noted that a certain percentage of the day-of-game/event jobs would be expected to be relocate from existing employment at the Oracle Arena in Oakland to the proposed event center. However, because Oracle Arena would continue to serve as an event venue, and furthermore, that simultaneous events would occur at Oracle Arena and the proposed new event center, there would be a net increase in event-day employment. For purposes of a conservative analysis, all day-of-game/event jobs at the proposed event center are considered net new.

**TABLE 2
PROJECT EMPLOYMENT POPULATION**

Project Component	Existing FTE ^a	New FTE ^a	Day-of-Game/Event Workers	Total
Golden State Warriors Staff	150	105	-- ^b	255
Event Center Non-Warriors Day-of-Game Staff	--	--	1,000 ^c	1,000
Office Staff	--	2,101	--	2,101
Retail Staff	--	372	--	372
Subtotal FTE Employees	150	2,578		2,728 FTE Employees
Subtotal Day-of-Game Staff			1,000	1,000 Day-of Game Staff
Total	150	2,578	1,000	3,728 Total Workers (3,578 New Workers)

NOTES:

^a FTE = full-time equivalent

^b Approximately 100 Golden State Warriors employees would work at Warriors games, however, they are accounted for in the estimate of Golden State Warriors FTE staff.

^c Non-Warriors event center staffing level for a Golden State Warriors game is assumed in this analysis; lower non-Warriors staffing levels (675 – 775 workers) at the event center are anticipated for events such as concerts, family shows, other sporting events and other rentals.

^d See text for assumptions regarding day-of-game/event workers.

SOURCE: Golden State Warriors, 2014

The new jobs would represent about 12.8 percent of the unemployed labor force in San Francisco and about 2.3 percent of unemployed workers in the five-county region. These new jobs would also represent about 1.9 percent of the new jobs that are projected by ABAG to be added in San Francisco by 2040.

Considering current unemployment levels in the City and region, and that the great majority of new jobs would not involve specialized skills, knowledge, or experience that could not be provided by individuals within the local or regional labor force, employment demand generated by project implementation is expected to be readily met by the local work force currently living in San Francisco or the five-county region.

Given that population or employment growth that would result from operation of the proposed project is substantially less than the population and employment growth forecasted to occur in the City, and because employment generated by the project could be met by the local and regional labor force, the project impact related to direct growth inducement would be less than significant.

Based on all these factors, project operation would not result in any new significant operational-related impacts, or substantially increase the severity of previously-identified operational impacts, to population growth. Furthermore, there have been no substantial changes with respect to circumstances under which the project is undertaken nor has any new information become available that will result in new or more severe operational-related impacts to population growth associated with the proposed project.

As discussed under Impact PH-1 regarding project construction, project operation would not involve the extension of roads or other infrastructure except to the project site itself, at a location already well served by roads and other infrastructure, including previously approved improvements to roads and

infrastructure associated with overall Mission Bay plan development. Therefore the indirect impacts on population growth of project operation would be less than significant.

The Mission Bay FSEIR did not identify any significant operational-related impacts to population growth, and accordingly, did not require any mitigation measures for this impact. Furthermore, the Mission Bay FSEIR did not identify any alternatives to reduce operational-related impacts to population growth. Consequently, no new or different mitigation measures or alternatives to reduce project operational impacts to population growth are identified or required with respect to the currently proposed project.

Impact PH-5: Operation of the proposed project would not displace existing housing units or create substantial demand for additional housing. (Less than Significant)

As discussed above under Impact PH-2, no existing housing is located at the project site, and consequently, the project would not displace any existing housing units. As discussed under Impact PH-4, it is expected that employment needs for project operations would be met by residents already living in San Francisco or the rest of the five-county region. Therefore, project implementation would not create substantial demand for additional housing, and the impact would be less than significant.

Impact PH-6: Operation of the proposed project would not displace substantial numbers of people, necessitating the construction of replacement housing elsewhere. (No Impact)

As described under Impact PH-3, the construction of the project would not result in a displacement of population. Given that no impact would occur, project operations would similarly have no impact related to the displacement of people.

Cumulative Impacts

Impact C-PH-1: The proposed project, in combination with other past, present, and reasonably foreseeable future projects, would not result in significant adverse cumulative impacts on population and housing. (Less than Significant)

The geographic context for analysis of potential cumulative population and housing impacts is San Francisco. Forecasts of reasonably foreseeable future development are based on the City and County of San Francisco's most recent Pipeline Report.²⁵ The Pipeline Report describes the development projects that would add residential units or commercial space, applications for which have been formally submitted to the Planning Department or the Department of Building Inspection. Pipeline projects encompass various stages of proposed development, from applications filed to entitlements secured, building permits issued to projects under construction.²⁶ In addition, the UCSF 2014 LRDP anticipates the addition of approximately 1.46 million gsf of new space on UCSF's North Campus (north of 16th Street), as well as approximately 918,000 gsf on the South Campus (south of 16th Street). (UCSF projects are not included in the City's Pipeline Report because the university is not under City jurisdiction.)

²⁵ San Francisco Planning Department, *San Francisco Pipeline Report Quarter 2, 2014*, September 2014.

²⁶ However, the Pipeline Report does not include projects undergoing preliminary Planning Department review or projections based on area plan analysis.

Project Construction

As discussed under Impact PH-1, project construction is expected to generate several hundred construction jobs phased over a duration of approximately 26 months. Because construction employment is temporary, it would not combine with past or future construction projects to contribute to a cumulative impact related to construction employment. Project construction could be occurring concurrently with a considerable amount of other construction activity within San Francisco, however. The City's current Pipeline Report indicates that development proposals for a total of 18,482,800 square feet of commercial development and residential development totaling 50,700 units have been filed with the City, are under review, or are under construction. Some of these projects, potentially also including development pursuant to the UCSF 2014 LRDP, would be under construction at the same time as the proposed project. Despite the current robust level of construction activity in the City, however, considering the substantial job losses in the region experienced by the construction industry until recently, the construction labor force in San Francisco and the surrounding region is expected to accommodate demand for construction labor. Therefore, the cumulative impact of project construction in combination with other concurrent construction projects within the City would be less than significant.

Project Operation

Operation of the proposed project at Blocks 29-32 would add a total of up to 3,578 new jobs at the project site, as discussed under Impact PH-4. The project would not create a residential population, and consequently would not contribute to cumulative population and related housing impacts.

ABAG provides longer-term population, housing, and employment projections for San Francisco. The current projections were prepared, with MTC, in conjunction with development of Plan Bay Area.²⁷ Employment in San Francisco is expected to increase by 190,780 jobs between 2010 and 2040. The anticipated new commercial development discussed in the City's pipeline report would generate approximately 43,500 net new jobs (based on an average City employee density estimates for the proposed land uses). If this development were fully built out, combined with the project's estimated 3,578 new jobs, the cumulative employment increase would be 47,078 jobs. This would represent approximately 25 percent of employment growth estimated to occur in the City by 2040. Additional employment would be attributed to development pursuant to the UCSF 2014 LRDP—about 11,430 new jobs across all UCSF campuses. The same ABAG projections forecast that San Francisco will gain approximately 101,000 households by 2040, an increase of approximately 35 percent from the 2010 total. Given that the combined new employment would not exceed San Francisco's currently projected employment and housing growth for 2040, the cumulative increase in employment associated with the project in combination with other foreseeable nonresidential development would not result in a significant cumulative impact on the City's population and housing resources, and the impact would be less than significant.

Summary of Cultural Resource Impacts in Mission Bay FSEIR

The cultural resources significance criteria were addressed in the Mission Bay FSEIR in the Visual Quality and Urban Design section and the Initial Study Cultural Resources section. Relevant information from these sections is summarized below.

Summary of Historic Architectural Resources in Mission Bay FSEIR

The Mission Bay FSEIR Visual Quality and Urban Design section summarized information from the 1990 Mission Bay FEIR on historic architectural resources present within or adjacent to the Mission Bay plan area. The Mission Bay FSEIR reported that former Fire Station 30, located at Third Street and Mission Rock Street within the Mission Bay plan area, was potentially eligible for the National Register of Historic Places (NRHP); and the Lefty O'Doul and Peter Maloney Bridges, located at China Basin Channel adjacent to but outside of the Mission Bay plan area, were determined to be eligible for listing on the NRHP.²⁸ These historic architectural resources are not located within, or in proximity to, the Blocks 29 to 32 site.

The Mission Bay FSEIR Visual Quality and Urban Design Impacts section determined that the proposed demolition of former Fire Station 30 would be a significant impact to this historic architectural resource, however, with implementation of Mitigation Measures D.2 identified in the Mission Bay FSEIR, this impact would be reduced to a less than significant level. The Mission Bay FSEIR further determined that since the Lefty O'Doul and Peter Maloney Bridges were located outside the Mission Bay plan area, and those structures and their setting would not be modified under the Mission Bay plan, impacts to those historic architectural resources would be less than significant.

In summary, the Mission Bay FSEIR determined the Mission Bay plan would result in a significant impact to historic architectural resources, and identified mitigation measures to reduce the impact to a less than

²⁸ In 1989, the Lefty O'Doul Bridge was designated City Landmark No. 194.

significant level. However, this impact and associated mitigation measures are not applicable to the Blocks 29-32 site.

Historic and Prehistoric Archaeological Resources in Mission Bay FSEIR

The Mission Bay FSEIR Initial Study Cultural Resources section summarized information from the 1990 Mission Bay FEIR on historic and prehistoric resources within the Mission Bay plan area, including information from a Cultural Resources Evaluation conducted in 1987 by David Chavez & Associates, and supplemented with an archaeological resources review conducted in 1997 also by David Chavez & Associates. The Mission Bay FSEIR Initial Study indicated that in 1997 the overall potential for prehistoric Native American sites within the Mission Bay plan area was considered to be low. However, there was potential for historic-period archaeological resources to be present within the Mission Bay plan area associated with the use of the area for industrial purposes and as a City landfill in the 19th and early 20th centuries. The Mission Bay FSEIR Initial Study presented mapping of areas within the Mission Bay plan area that had the most notable potential for subsurface historic and prehistoric cultural resources; this included the portion of the Mission Bay plan area south of and including 16th Street, which is located immediately south of and adjacent to the project site at Blocks 29-32.²⁹ No substantial potential for archeological resources was identified in most areas composed of filled land in the former Mission Bay, including the project site, with the exception of the opposite (north) margin of Mission Bay, which was used as the City dump in the late 19th century. At the time of publication of the FSEIR, no substantial potential for archeological resources was identified in most areas composed of filled land in the former Mission Bay, including the project site, with the exception of the opposite (north) margin of Mission Bay, which was used as the City dump in the late 19th century.

The Mission Bay FSEIR Initial Study concluded that development and associated construction under the Mission Bay plan could disturb potentially significant subsurface historic resources in six historic resource areas within the overall plan area and that the entire Mission Bay plan area has some sensitivity for the presence of unknown historic or prehistoric archaeological resources. However, with implementation of Mitigation Measures D.3, D.4, D.5, and D.6 identified in the Mission Bay FSEIR, these impacts would be reduced to a less-than-significant level.

In summary, the Mission Bay FSEIR determined that the Mission Bay plan would result in potentially significant impacts to subsurface prehistoric or historic archaeological resources within the Mission Bay plan area, including potential impacts within the vicinity of Blocks 29-32, and identified mitigation measures to reduce those impacts to a less-than-significant level.

²⁹ Potential historic-period resources in this area were identified as being associated with 19th century shipbuilding activities at Potrero Point (Point San Quentin), which extended northward into the southeast corner of Mission Bay nearly to 16th Street, and with a nearby glass factory.

Impact Evaluation

Historic Architectural Resources

Impact CP-1: The project would not cause a substantial adverse change in the significance of a historical resource as defined in §15064.5, including those resources listed in Article 10 or Article 11 of the San Francisco Planning Code. (Less than Significant)

The proposed project would result in the construction and operation of an event center, retail uses, office buildings, parking facilities and open space areas within the project site. However, as discussed above, the Mission Bay FSEIR did not identify any historic architectural resources within or in proximity of the project site, and correspondingly, did not identify any significant impacts to historic architectural resources within the project site. Given the absence of historic architectural resources within or in proximity to the project site, the construction and operation of the proposed uses would not result in any new impacts, or increase the severity of previously-identified impacts, to historic architectural resources.

At the time of preparation of the Mission Bay FSEIR, several buildings and facilities were located and operating on the project site. These buildings and structures were subsequently removed, and the project site has been subject to grading, some excavation, and construction of paved surface parking lots, fencing and associated utilities on portions of the site. This change in conditions on the project site has not altered the fact that the site contains no historic architectural resources, as those facilities that were removed from the project site did not have any historic architectural status or importance, nor would it alter the effects of the project with respect to impacts on historic architectural resources.

Pursuant to mitigation identified in the Mission Bay FSEIR, the sole historic architectural resource located within the Mission Bay plan area (former Fire Station 30) was evaluated and determined to be eligible for the NRHP.³⁰ This change in conditions for this resource, however, has no effect on conditions regarding the absence of historic architectural resources at or in the vicinity of the project site. There are no other new historic architectural resources, including City Landmarks and/or historic districts, which have been identified within the Mission Bay plan area, beyond those previously addressed in the Mission Bay FSEIR. Therefore, there have been no substantial changes with respect to circumstances under which the project is undertaken nor has any new information become available that will result in new or more severe impacts associated with the proposed project.

As discussed above, the Mission Bay FSEIR did not identify any significant impacts to historic architectural resources within the project site, and accordingly, did not require any mitigation measures for historic architectural resources that were applicable to the project site. Furthermore, the Mission Bay FSEIR did not identify any alternatives to reduce impacts to historic architectural resources within the project site. Consequently, no new or different mitigation measures or alternatives to reduce project impacts to historic architectural resources at the project site are identified or required with respect to the currently proposed project.

³⁰ Former Fire Station 30 has since been rehabilitated consistent with the *Secretary of the Interior's Standards for the Treatment of Historic Properties*, converted to provide a community meeting room and house the Arson Task Force, and integrated with the newly-constructed Public Safety Building.

On the basis of the factors discussed above, the project would not have any new or substantially more severe effects than those identified in the Mission Bay FSEIR on historical resources as defined in §15064.5, including those resources listed in Article 10 or Article 11 of the *Planning Code*.

Archaeological Resources

Impact CP-2: The project could cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5. (Less than Significant with Mitigation)

As discussed above, the Mission Bay FSEIR determined in 1998 that the Mission Bay plan would result in potentially significant impacts to subsurface prehistoric- or historic-era archaeological resources within the Mission Bay plan area, and identified mitigation measures to reduce those impacts, including within Blocks 29 to 32, to a less-than-significant level.

The proposed project would result in the construction and operation of an event center, retail uses, office buildings, parking facilities and open space areas within the project site. Construction activities would require foundation excavation to about 30 feet below San Francisco datum, pile driving to depths below that, and grading all of the site, which could disturb potentially significant subsurface historic and prehistoric archaeological resources, should such resources be present. These types of subsurface construction activities were anticipated and analyzed in the Mission Bay FSEIR, and there is nothing specific to the proposed subsurface construction activities at the project site that would result in new significant impacts or substantially increase the severity of previously-identified significant impacts to archaeological resources. Thus, impacts of the proposed project on archaeological resources would be potentially significant, but impacts could be reduced to less than significant with identified mitigation measures.

The FSEIR presented detailed mitigation measures for archaeological resources testing, monitoring, and exploration for identified historic resource areas within the Mission Bay plan area (see Mission Bay FSEIR Mitigation Measures D.3 and D.4). These historic resource areas were identified based on historic land uses in the area, such as early shipbuilding activities in the 1860s to 1880s, and pre-construction archaeological testing and construction monitoring is recommended to reduce potential impacts to less than significant. In addition, the FSEIR identified Mitigation Measure D.6 to mitigate for accidental discovery of archaeological resources anywhere in the plan area.

The FSEIR indicated that Blocks 29-32 is not located within any of the identified historic resource areas, which would imply that Mitigation Measures D.3 and D.4 are not specifically applicable to the project site, although one of the identified historic resource areas is located directly south of the Blocks 29-32 project site. FSEIR Mitigation Measure D.5 applies specifically to the area bordered by Berry, Fifth, and Seventh Streets (location of the 19th century), and does not apply to the project site. FSEIR Mitigation Measure D.6 is applicable to the project site, as discussed further below.

As described in the Project Description, the project sponsor has indicated that in order to minimize the risk of construction delays due to the potential presence of archaeological resources, the project sponsor would retain the services of an archaeologist to develop and implement a program of archaeological testing as part of the preliminary site evaluation and planning program for the proposed development at Blocks 29-32. This program would be similar to Mitigation Measures D.3 and D.4 previously identified in

the FSEIR, and the results would be used to inform the construction activities, with the intent to avoid or minimize effects on subsurface archaeological resources prior to the commencement of foundation excavation and pile driving. The project sponsor would use the results of the archaeological testing to develop a construction monitoring program for protection of archaeological resources during construction while still achieving the Warriors' scheduling objectives. Nevertheless, while this component of the proposed project would provide additional protection for potentially present archaeological resources, due to the as yet unknown details of the proposed testing program, there remains the potential for project construction activities to adversely affect archaeological resources, if encountered, and the impact would be potentially significant.

Implementation of Mitigation Measures M-CP-2a (Archaeological Testing, Monitoring and/or Data Recovery Program) and M-CP-2b (Accidental Discovery of Archaeological Resources) would reduce this impact to less than significant. Mitigation Measures M-CP-2a would formalize the project sponsor's commitment to conduct archaeological testing and monitoring (as well as data recovery, if warranted), and would require that the project sponsor's archaeological testing and monitoring program be consistent with the City's standard protocols; this measure would in effect implement the requirements of FSEIR Mitigation Measures D.3 and D.4.

Mitigation Measure M-CP-2b replaces and implements FSEIR Mitigation Measure D.6. This replacement does not infer that there would be a new more severe significant impact or an impact of greater severity than was analyzed and disclosed in the FSEIR. Consistent with the conclusions of the FSEIR, FSEIR Mitigation Measure D.6, as implemented through Mitigation Measure M-CP-2b, would reduce the proposed project's impact to a less-than-significant level. As such, the proposed project would not result in any new or substantially more severe impacts on archaeological resources than were analyzed and disclosed in the FSEIR.

The Mission Bay FSEIR identified feasible mitigation measures to reduce potentially significant impacts to subsurface prehistoric or historic archaeological resources within the Mission Bay plan area, including the project site, to a less than significant level. The Mission Bay FSEIR did not identify any alternatives to reduce archaeological resources at the project site. While there are no new or different mitigation measures or alternatives required to reduce project impacts to archaeological resources beyond those previously identified in the Mission Bay FSEIR, the City has since updated its standard mitigation measures for accidental discovery of archaeological resources, which would augment and replace the FSEIR Mitigation D.6, as specified below.

As discussed under Historic Architectural Resources, above, since preparation of the Mission Bay FSEIR, the project site has been subject to subsurface disturbance from grading, some excavation activities, and construction of paved surface parking lots. In addition, geotechnical investigations at the project site have indicated the top of the Colma Formation geologic unit underlying the site was at depths ranging from 19 to 70 feet below ground surface.³¹ This geologic unit is known to be associated with the presence of archaeological resources. This information is corroborated by other geotechnical reports for development in

³¹ Langan Treadwell Rollo, 2014. Preliminary Geotechnical Evaluation, Block 29-32 Mission Bay, San Francisco, California, Project No. 731617202. March 28, 2014.

the Mission Bay area that has occurred since publication of the Mission Bay FSEIR. No new historic or prehistoric archaeological resources have been identified at Blocks 29-32 since publication of the Mission Bay FSEIR.³² However, this change in conditions on the project site and additional information would not create the potential for the project to result in new or more severe impacts to potentially significant subsurface historic and prehistoric archaeological resources that may be present on the site.

Thus, with implementation of Mitigation Measures M-CP-2a (Archaeological Testing, Monitoring and/or Data Recovery Program) and M-CP-2b (Accidental Discovery of Archaeological Resources), the proposed project would not result in any new or more severe significant effects on archaeological resources than were previously identified in the FSEIR.

Mitigation Measure M-CP-2a: Archaeological Testing, Monitoring and/or Data Recovery Program

Based on a reasonable presumption that archaeological resources may be present within the project site, the following measures shall be undertaken to avoid any potentially significant adverse effect from the proposed project on buried or submerged historical resources. The project sponsor shall retain the services of an archaeological consultant approved by OCII or its designated representative such as those from the rotational Department Qualified Archaeological Consultants List (QACL) maintained by the Planning Department archaeologist. The project sponsor shall contact the Department archaeologist to obtain the names and contact information for the next three archaeological consultants on the QACL. The archaeological consultant shall undertake an archaeological testing program as specified herein. In addition, the consultant shall be available to conduct an archaeological monitoring and/or data recovery program if required pursuant to this measure. The archaeological consultant's work shall be conducted in accordance with this measure at the direction of OCII or its designated representative. All plans and reports prepared by the consultant as specified herein shall be submitted first and directly to OCII or its designated representative for review and comment, and shall be considered draft reports subject to revision until final approval by OCII or its designated representative. Archaeological monitoring and/or data recovery programs required by this measure could suspend construction of the project for up to a maximum of four weeks. At the direction of the OCII or its designated representative, the suspension of construction can be extended beyond four weeks only if such a suspension is the only feasible means to reduce to a less than significant level potential effects on a significant archaeological resource as defined in CEQA Guidelines Sect. 15064.5 (a)(c).

Consultation with Descendant Communities: On discovery of an archaeological site³³ associated with descendant Native Americans, the Overseas Chinese, or other descendant group an appropriate representative³⁴ of the descendant group and OCII or its designated representative shall be contacted. The representative of the descendant group shall be given the opportunity to

³² The "Prehistoric Native American Shell Middens on Mission Bay, San Francisco" archaeological district, recently determined eligible for the National Register, is located in the South of Market neighborhood (in the vicinity of the original northern shoreline of the Mission Bay), and consequently, is not located in proximity to the project site, and moreover, is completely outside the Mission Bay plan area.

³³ By the term "archaeological site" is intended here to minimally include any archaeological deposit, feature, burial, or evidence of burial.

³⁴ An "appropriate representative" of the descendant group is here defined to mean, in the case of Native Americans, any individual listed in the current Native American Contact List for the City and County of San Francisco maintained by the California Native American Heritage Commission and in the case of the Overseas Chinese, the Chinese Historical Society of America. An appropriate representative of other descendant groups should be determined in consultation with the Department archaeologist.

monitor archaeological field investigations of the site and to consult with OCII or its designated representative regarding appropriate archaeological treatment of the site, of recovered data from the site, and, if applicable, any interpretative treatment of the associated archeological site. A copy of the Final Archaeological Resources Report shall be provided to the representative of the descendant group.

Archaeological Testing Program. The archaeological consultant shall prepare and submit to OCII or its designated representative for review and approval an archaeological testing plan (ATP). The archaeological testing program shall be conducted in accordance with the approved ATP. The ATP shall identify the property types of the expected archaeological resource(s) that potentially could be adversely affected by the proposed project, the testing method to be used, and the locations recommended for testing. The purpose of the archaeological testing program will be to determine to the extent possible the presence or absence of archaeological resources and to identify and to evaluate whether any archaeological resource encountered on the site constitutes an historical resource under CEQA.

At the completion of the archaeological testing program, the archaeological consultant shall submit a written report of the findings to OCII or its designated representative. If based on the archaeological testing program the archaeological consultant finds that significant archaeological resources may be present, OCII or its designated representative in consultation with the archaeological consultant shall determine if additional measures are warranted. Additional measures that may be undertaken include additional archaeological testing, archaeological monitoring, and/or an archaeological data recovery program. No archaeological data recovery shall be undertaken without the prior approval of OCII or its designated representative. If OCII or its designated representative determines that a significant archaeological resource is present and that the resource could be adversely affected by the proposed project, at the discretion of the project sponsor either:

- A. The proposed project shall be re-designed so as to avoid any adverse effect on the significant archaeological resource; or
- B. A data recovery program shall be implemented, unless OCII or its designated representative determines that the archaeological resource is of greater interpretive than research significance and that interpretive use of the resource is feasible.

Archaeological Monitoring Program. If OCII or its designated representative in consultation with the archaeological consultant determines that an archaeological monitoring program shall be implemented the archaeological monitoring program shall minimally include the following provisions:

- The archaeological consultant, project sponsor, and OCII or its designated representative shall meet and consult on the scope of the AMP reasonably prior to any project-related soils disturbing activities commencing. OCII or its designated representative in consultation with the archaeological consultant shall determine what project activities shall be archaeologically monitored. In most cases, any soils- disturbing activities, such as demolition, foundation removal, excavation, grading, utilities installation, foundation work, driving of piles (foundation, shoring, etc.), site remediation, etc., shall require archaeological monitoring because of the risk these activities pose to potential archaeological resources and to their depositional context;
- The archeological consultant shall advise all project contractors to be on the alert for evidence of the presence of the expected resource(s), of how to identify the evidence of the expected

resource(s), and of the appropriate protocol in the event of apparent discovery of an archaeological resource;

- The archaeological monitor(s) shall be present on the project site according to a schedule agreed upon by the archaeological consultant and OCII or its designated representative until OCII or its designated representative has, in consultation with project archaeological consultant, determined that project construction activities could have no effects on significant archaeological deposits;
- The archaeological monitor shall record and be authorized to collect soil samples and artifactual/ecofactual material as warranted for analysis;
- If an intact archaeological deposit is encountered, all soils-disturbing activities in the vicinity of the deposit shall cease. The archaeological monitor shall be empowered to temporarily redirect demolition/excavation/pile driving/ construction activities and equipment until the deposit is evaluated. If in the case of pile driving activity (foundation, shoring, etc.), the archaeological monitor has cause to believe that the pile driving activity may affect an archaeological resource, the pile driving activity shall be terminated until an appropriate evaluation of the resource has been made in consultation with OCII or its designated representative. The archaeological consultant shall immediately notify the OCII or its designated representative of the encountered archaeological deposit. The archaeological consultant shall make a reasonable effort to assess the identity, integrity, and significance of the encountered archaeological deposit, and present the findings of this assessment to OCII or its designated representative.

Whether or not significant archaeological resources are encountered, the archaeological consultant shall submit a written report of the findings of the monitoring program to the OCII or its designated representative.

Archaeological Data Recovery Program. The archaeological data recovery program shall be conducted in accord with an archaeological data recovery plan (ADRP). The archaeological consultant, project sponsor, and OCII or its designated representative shall meet and consult on the scope of the ADRP prior to preparation of a draft ADRP. The archaeological consultant shall submit a draft ADRP to OCII or its designated representative. The ADRP shall identify how the proposed data recovery program will preserve the significant information the archaeological resource is expected to contain. That is, the ADRP will identify what scientific/historical research questions are applicable to the expected resource, what data classes the resource is expected to possess, and how the expected data classes would address the applicable research questions. Data recovery, in general, should be limited to the portions of the historical property that could be adversely affected by the proposed project. Destructive data recovery methods shall not be applied to portions of the archaeological resources if nondestructive methods are practical.

The scope of the ADRP shall include the following elements:

- *Field Methods and Procedures.* Descriptions of proposed field strategies, procedures, and operations.
- *Cataloguing and Laboratory Analysis.* Description of selected cataloguing system and artifact analysis procedures.
- *Discard and Deaccession Policy.* Description of and rationale for field and post-field discard and deaccession policies.

- *Interpretive Program.* Consideration of an on-site/off-site public interpretive program during the course of the archaeological data recovery program.
- *Security Measures.* Recommended security measures to protect the archaeological resource from vandalism, looting, and non-intentionally damaging activities.
- *Final Report.* Description of proposed report format and distribution of results.
- *Curation.* Description of the procedures and recommendations for the curation of any recovered data having potential research value, identification of appropriate curation facilities, and a summary of the accession policies of the curation facilities.

Human Remains and Associated or Unassociated Funerary Objects. The treatment of human remains and of associated or unassociated funerary objects discovered during any soils disturbing activity shall comply with applicable State and Federal laws. This shall include immediate notification of the Coroner of the City and County of San Francisco and in the event of the Coroner’s determination that the human remains are Native American remains, notification of the California State Native American Heritage Commission (NAHC) who shall appoint a Most Likely Descendant (MLD) (Pub. Res. Code Sec. 5097.98). The archaeological consultant, project sponsor, OCII or its designated representative, and MLD shall make all reasonable efforts to develop an agreement for the treatment of, with appropriate dignity, human remains and associated or unassociated funerary objects (CEQA Guidelines. Sec. 15064.5(d)). The agreement should take into consideration the appropriate excavation, removal, recordation, analysis, custodianship, curation, and final disposition of the human remains and associated or unassociated funerary objects.

Final Archaeological Resources Report. The archeological consultant shall submit a Draft Final Archaeological Resources Report (FARR) to OCII or its designated representative that evaluates the historical significance of any discovered archaeological resource and describes the archaeological and historical research methods employed in the archaeological testing/monitoring/data recovery program(s) undertaken. Information that may put at risk any archaeological resource shall be provided in a separate removable insert within the final report.

Once approved by OCII or its designated representative, copies of the FARR shall be distributed as follows: California Archaeological Site Survey Northwest Information Center (NWIC) shall receive one (1) copy and OCII or its designated representative shall receive a copy of the transmittal of the FARR to the NWIC. As requested by OCII, the Environmental Planning division of the Planning Department shall receive one bound, one unbound and one unlocked, searchable PDF copy on CD of the FARR along with copies of any formal site recordation forms (CA DPR 523 series) and/or documentation for nomination to the National Register of Historic Places/California Register of Historical Resources. In instances of high public interest in or the high interpretive value of the resource, OCII or its designated representative may require a different final report content, format, and distribution than that presented above.

Mitigation Measure M-CP-2b: Accidental Discovery of Archaeological Resources (Implementing FSEIR Mitigation D.6)

The following mitigation measure is required to avoid any potential adverse effect from the proposed project on accidentally discovered buried or submerged historical resources as defined in *CEQA Guidelines* Section 15064.5(a)(c). The project sponsor shall distribute the Planning Department archaeological resource “ALERT” sheet to the project prime contractor; to any project subcontractor

(including demolition, excavation, grading, foundation, pile driving, etc. firms); or utilities firm involved in soils disturbing activities within the project site. Prior to any soils disturbing activities being undertaken each contractor is responsible for ensuring that the "ALERT" sheet is circulated to all field personnel, including machine operators, field crew, pile drivers, supervisory personnel, etc. The project sponsor shall provide OCII officer or its designated representative with a signed affidavit from the responsible parties (prime contractor, subcontractor(s), and utilities firm) confirming that all field personnel have received copies of the Alert Sheet.

Should any indication of an archaeological resource be encountered during any soils disturbing activity of the project, the project Head Foreman and/or project sponsor shall immediately notify OCII officer or its designated representative and shall immediately suspend any soils disturbing activities in the vicinity of the discovery until OCII officer or its designated representative has determined what additional measures should be undertaken.

If OCII officer or its designated representative determines that an archaeological resource may be present within the project site, the project sponsor shall retain the services of an archaeological consultant from the pool of qualified archaeological consultants maintained by the Planning Department archaeologist. The archaeological consultant shall advise OCII officer or its designated representative as to whether the discovery is an archaeological resource, retains sufficient integrity, and is of potential scientific/historical/cultural significance. If an archaeological resource is present, the archaeological consultant shall identify and evaluate the archaeological resource. The archaeological consultant shall make a recommendation as to what action, if any, is warranted. Based on this information, OCII officer or its designated representative may require, if warranted, specific additional measures to be implemented by the project sponsor.

Measures might include: preservation in situ of the archaeological resource; an archaeological monitoring program; or an archaeological testing program. If an archaeological monitoring program or archaeological testing program is required, it shall be consistent with the Environmental Planning (EP) division guidelines for such programs. OCII officer or its designated representative may also require that the project sponsor immediately implement a site security program if the archaeological resource is at risk from vandalism, looting, or other damaging actions.

The project archaeological consultant shall submit a Final Archaeological Resources Report (FARR) to OCII officer or its designated representative that evaluates the historical significance of any discovered archaeological resource and describing the archaeological and historical research methods employed in the archaeological monitoring/data recovery program(s) undertaken. Information that may put at risk any archaeological resource shall be provided in a separate removable insert within the final report.

Copies of the Draft FARR shall be sent to OCII officer or its designated representative for review and approval. Once approved by OCII officer or its designated representative, copies of the FARR shall be distributed as follows: California Archaeological Site Survey Northwest Information Center (NWIC) shall receive one (1) copy and OCII officer or its designated representative shall receive a copy of the transmittal of the FARR to the NWIC. OCII and the Environmental Planning division of the Planning Department shall each receive one bound copy, one unbound copy and one unlocked, searchable PDF copy on CD three copies of the FARR along with copies of any formal site recordation forms (CA DPR 523 series) and/or documentation for nomination to the National Register of Historic Places/California Register of Historical Resources. In instances of high public interest or interpretive value, OCII officer or its designated representative may require a different final report content, format, and distribution than that presented above.

Paleontological Resources

Impact CP-3: The project would not directly or indirectly destroy a unique paleontological resource or site or unique geologic feature. (Topic Not Previously Analyzed; Less than Significant)

Paleontological resources, or fossils, are the remains, imprints, or traces of once-living organisms preserved in rocks and sediments. Paleontological resources are lithologically dependent; that is, deposition and preservation of paleontological resources are related to the lithologic unit in which they occur. If the rock types representing a deposition environment conducive to deposition and preservation of fossils are not favorable, fossils will not be present. Rock types that may contain fossils include sedimentary and volcanic formations.

The Mission Bay FEIR and FSEIR did not specifically address potential impacts on paleontological resources within the Mission Bay Plan area, including the project site. However, excavation for the project would encounter only artificial fill and Holocene-aged Bay Mud, and there are no unique geologic features within the site.

The artificial fill is not naturally occurring and therefore does not likely contain significant fossil remains. There have been no vertebrate or invertebrate fossils identified in Holocene-aged sediments throughout the Bay Area, and the only plant fossils found in sediments of this age have been at Mount Lake in the Presidio.³⁵ While Bay Mud contains some invertebrate remains such as gastropods and bivalves, these are typically not yet fossilized, not yet extinct, and are likely to occur throughout similar deposits around the bay. Such remains are therefore not considered a significant paleontological resource, and these materials are considered to have a low paleontological potential per the Society of Vertebrate Paleontology criteria.³⁶

Proposed project construction activities would require pile driving activities, which were assumed in the Mission Bay FSEIR to occur in the Mission Bay plan area, including within the project site. There is nothing specific to the proposed subsurface construction activities at the project site that would be substantially different from those analyzed in the Mission Bay FSEIR.

The proposed installation of piles at the project site would involve limited disruption of the underlying geologic units. As noted above, excavation at the project site would encounter only artificial fill and Bay Mud. In addition, the project would not involve excavation of exposed rock outcrops that would destroy

³⁵ University of California Museum of Paleontology Specimens, UCMP Specimen Search, <http://ucmpdb.berkeley.edu/>. Accessed on September 8, 2014.

³⁶ The SVP has established guidelines for the identification, assessment, and mitigation of adverse impacts on nonrenewable paleontological resources. Many federal, state, county, and city agencies have either formally or informally adopted the SVP's standard guidelines for the mitigation of adverse construction-related impacts on paleontological resources. The SVP has helped define the value of paleontological resources and, in particular, indicates that geologic units of high paleontological potential are those from which vertebrate or significant invertebrate or significant suites of plant fossils have been recovered in the past (i.e., are represented in institutional collections). Areas that contain potentially datable organic remains older than the Recent era, including deposits associated with nests or middens, and areas that may contain new vertebrate deposits, traces, or trackways, are also classified as significant. Geologic units of low paleontological potential are those that are not known to have produced a substantial body of significant paleontological material. As such, the sensitivity of an area with respect to paleontological resources hinges on its geologic setting and whether significant fossils have been discovered in the area or in similar geologic units. Society of Vertebrate Paleontology (SVP), *Assessment and Mitigation of Adverse Impacts to Nonrenewable Paleontologic Resources: Standard Guidelines*, <http://vertpaleo.org/The-Society/Governance-Documents/Conformable-Impact-Mitigation-Guidelines-Committee.aspx>. Accessed on September 8, 2014.

a unique geologic feature. Therefore, because there is a low potential to encounter paleontological resources during construction, impacts related to paleontological resources and geologic features would be less than significant, and no mitigation is required.

Human Remains

Impact CP-4: The proposed project would not disturb any human remains, including those interred outside of formal cemeteries. (Topic Not Previously Analyzed; Less than Significant)

The Mission Bay FEIR and FSEIR did not specifically address impacts associated with potential disturbance of human remains within the Mission Bay Plan area, including the project site. However, to date, no known human burial locations have been identified within the project site, though the possibility of such a discovery cannot be entirely discounted. Project construction could result in direct impacts to previously undiscovered human remains during earthmoving activities.

Under State law, human remains and associated burial items may be significant resources in two ways: they may be significant to descendant communities for patrimonial, cultural, lineage, and religious reasons; and human remains may also be important to the scientific community, such as prehistorians, epidemiologists, and physical anthropologists. The specific stake of some descendant groups in ancestral burials is a matter of law for some groups, such as Native Americans (CEQA Guidelines Section 15064.5 (d), Public Resources Code Section 5097.98). In other cases, the concerns of the associated descendent group regarding appropriate treatment and disposition of discovered human burials may become known only through outreach. Beliefs concerning appropriate treatment, study, and disposition of human remains and associated burial items may be inconsistent and even conflict among descendent and scientific communities.

If encountered, the treatment of human remains and of associated or unassociated funerary objects discovered during any soils disturbing activity shall comply with applicable State and Federal Laws, including immediate notification of the Coroner of the City and County of San Francisco and in the event of the Coroner's determination that the human remains are Native American remains, notification of the California State Native American Heritage Commission (NAHC) who shall appoint a Most Likely Descendant (MLD) (Pub. Res. Code Sec. 5097.98).

The project sponsor would be required to retain a qualified archaeological consultant, who in conjunction with the project sponsor, OCII (or its designated representative), and the MLD, shall make all reasonable efforts to develop an agreement for the treatment of, with appropriate dignity, human remains and associated or unassociated funerary objects (CEQA Guidelines. Sec. 15064.5(d)). The agreement should take into consideration the appropriate excavation, removal, recordation, analysis, curation, possession, and final disposition of the human remains and associated or unassociated funerary objects.

These requirements are consistent with provisions listed in Mitigation Measure M-CP-2a, Archaeological Testing, Monitoring and/or Data Recovery Program.

Therefore, because the project would be required to comply with the regulations described above and to implement the measures specified under those regulations, impacts related to disturbance of human remains would be less than significant.

Cumulative Impacts

Impact C-CP-1: The proposed project, in combination with past, present, and reasonably foreseeable projects, could result in significant impacts to cultural resources. (Less than Significant with Mitigation)

The geographic scope for potential cumulative impacts related to cultural resources generally includes the Mission Bay area. Other reasonably foreseeable projects within the project vicinity with the potential to contribute to cumulative, cultural resources impacts would be required to undergo separate environmental review, as necessary, and to identify mitigation measures for any significant impacts. Cumulative impacts on cultural resources could result if the proposed project, in combination with other reasonably foreseeable projects in the vicinity, would collectively increase the potential for significant impacts, even with implementation of project-specific mitigations.

As the proposed project would have no impacts to historic architectural resources, it therefore would not contribute to any such cumulative impact. Similarly, as the proposed project would have less than significant impacts on paleontological resources as described in Impact CP-3, other projects in the vicinity would also be expected to have a less than significant impact on these resources because they are all located on similar underlying geologic units (i.e., artificial fill and Bay Mud) that have low potential for presence of paleontological resources. Therefore, the cumulative impact would also be considered less than significant.

Similar to the proposed project as described under Impacts CP-2 and CP-4, the cumulative projects in the Mission Bay area could have a significant impact on both recorded and unrecorded archaeological resources, including human remains interred outside of formal cemeteries, given the substantial amount of construction-related ground disturbance that could occur. The potential impacts of the proposed project when considered together with similar impacts from other reasonably foreseeable projects in the project vicinity could contribute to a significant cumulative impact to buried archaeological resources. However, implementation of measures required by regulation to address human remains and of Mitigation Measures M-CP-2a and M-CP-2b, as standard City-required mitigation, would also apply to cumulative projects based on each project's potential to affect archaeological resources. These measures would require implementation of legally-required appropriate treatment of human remains as well as archaeological testing, monitoring and/or data recovery programs, which would reduce cumulative impacts to archaeological resources to a less-than-significant level. Therefore, with implementation of Mitigation Measures M-CP-2a and M-CP-2b, the proposed project's contribution to cumulative impacts would be less than significant with mitigation.

Mitigation Measure M-CP-2a: Archaeological Testing, Monitoring and/or Data Recovery Program (see Impact CP-2 above)

Mitigation Measure M-CP-2b: Accidental Discovery of Archaeological Resources (see Impact CP-2 above)

<i>Topics:</i>	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
5. TRANSPORTATION AND CIRCULATION— Would the project:				
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Conflict with an applicable congestion management program, including but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location, that results in substantial safety risks?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) Result in inadequate emergency access?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

The SEIR will provide a summary of the transportation impacts from the Mission Bay FSEIR relevant to the project site. It will also include an updated, detailed analysis of transportation impacts associated with the proposed project, including explanation of the checklist items indicated above. The SEIR will include a complete description of the existing transportation setting, impact evaluation of project and cumulative impacts relative to existing conditions, and current mitigation measures, as appropriate.

With regard to the analysis of parking impacts of the proposed project, see discussion above under Aesthetics regarding Public Resources Code Section 21099. As stated above, parking is no longer to be considered in determining if a project has the potential to result in significant environmental effects for projects that meet all of the identified criteria. However, because parking conditions may be of interest to the public and the decision makers, the SEIR will present a parking demand analysis for informational purposes and will consider any secondary physical impacts associated with constrained supply (e.g., queuing by drivers waiting for scarce onsite parking spaces that affects the public right-of-way) as applicable in the transportation analysis.

<u>Topics:</u>	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
6. NOISE—Would the project:				
a) Result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan area, or, where such a plan has not been adopted, in an area within two miles of a public airport or public use airport, would the project expose people residing or working in the area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project located in the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Be substantially affected by existing noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The proposed project is not located within an airport land use plan area, within two miles of a public airport, or within the vicinity of a private airstrip. Therefore, criteria E.6(e) and 6(f) are not applicable to the proposed project and are not discussed further in this Initial Study or in the SEIR. The proposed event center, and office and retail land uses would not be considered noise sensitive receptors, similar to the commercial industrial/retail land uses that were envisioned for Blocks 29-32 under the Mission Bay FSEIR. Consequently, the proposed project would not be substantially affected by existing noises levels, and criterion E.6(g) is therefore not discussed further in this Initial Study or in the SEIR.

The SEIR will provide a summary of the noise impacts from the Mission Bay FSEIR relevant to the project site. It will also include an updated, detailed analysis of noise impacts associated with the proposed project, including explanation of the checklist items indicated above related to a potentially substantial increase in severity of significant impacts identified in the Mission Bay FSEIR. The SEIR will include a complete description of the existing noise setting (2014), impact evaluation of project and cumulative impacts relative to existing conditions, and current mitigation measures, as appropriate.

Topics:	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
7. AIR QUALITY—Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal, state, or regional ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Mission Bay FSEIR did not address odor impacts associated with development of the Mission Bay plan. However, the proposed project would result in the construction and operation of urban land uses at the project site, similar to the types of uses completed or planned in the Mission Bay redevelopment area, and none of these uses would create or generate objectionable odors. Therefore, the proposed project would not result in any new or significant odor impacts, and significance criterion E.7(e) is not discussed further in this Initial Study or in the SEIR.

The SEIR will provide a summary of the air quality impacts from the Mission Bay FSEIR. It will also include an updated, detailed analysis of air quality impacts associated with the proposed project, including explanation of the checklist items indicated above related to a potentially substantial increase in severity of significant impacts identified in the Mission Bay FSEIR. The SEIR will include a complete description of the existing air quality setting (2014), impact evaluation of project and cumulative impacts relative to existing conditions, and current mitigation measures, as appropriate.

Topics:	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
8. GREENHOUSE GAS EMISSIONS— Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

The Mission Bay FSEIR did not address greenhouse gas (GHG) emissions as a distinct environmental topic. The SEIR will include an updated, detailed analysis of GHG impacts associated with the proposed project, including explanation of the checklist items indicated above. The SEIR will include a complete description of the existing GHG setting (2014), impact evaluation of cumulative GHG impacts, and current mitigation measures, as appropriate.

Topics:	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
9. WIND AND SHADOW—Would the project:				
a) Alter wind in a manner that substantially affects public areas?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Create new shadow in a manner that substantially affects outdoor recreation facilities or other public areas?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

The SEIR will provide a summary of the wind and shadow impacts from the Mission Bay FSEIR relevant to the project site. It will also include an updated, detailed analysis of wind and shadow impacts associated with the proposed project, including explanation of the checklist items indicated above related to a potentially substantial increase in severity of significant impacts identified in the Mission Bay FSEIR. The SEIR will include a complete description of the existing wind and shadow setting (2014), impact evaluation of project and cumulative impacts relative to existing conditions, and current mitigation measures, as appropriate.

10. RECREATION—Would the project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Physically degrade existing recreational resources?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Summary of Recreation Impacts in Mission Bay FSEIR

The Mission Bay FSEIR Community Services and Utilities setting section summarized information on existing recreational uses that were present within the Mission Bay plan area at that time. The Mission Bay FSEIR identified the nearest existing public recreational facility to Blocks 29-32 as Agua Vista Park (a small landscaped area and fishing pier), located southeast of the project site across Terry A. François Boulevard.

The Mission Bay FSEIR Community Services and Utilities impacts section reported that residential and commercial development proposed within the Mission Bay plan area would generate a residential and employee demand, respectively, for parks. The Mission Bay FSEIR indicated 47 acres of open space was proposed within the Mission Bay plan area, of which more than 15 acres of new, non-UCSF parks and open space have been completed. Within the Mission Bay east subarea, this included an approximate 6-acre park to be developed as a bayfront linear park east of a realigned Terry A. François Boulevard (across from Blocks 30 and 32) from 16th Street north to Mission Rock Street; and a neighborhood park located along the west side of Terry A. François Boulevard south of 16th Street. In addition, the Mission Bay plan proposed a number of bicycle and pedestrian paths to connect parks and open spaces within the Mission Bay plan area, including a 20-foot wide setback to accommodate a pedestrian path along 16th Street (adjacent to Blocks 31 and 32) between Terry A. François Boulevard and Owens Street. The FSEIR noted that in addition to the proposed public open space, private open space would be developed within the Mission Bay plan area.

The Mission Bay FSEIR determined that the proposed areas of commercial development within the Mission Bay plan area would be located within a recommended 900 feet distance of open space. The Mission Bay FSEIR also determined that all proposed residential development within the Mission Bay plan area would be located within the recommended one-quarter mile distance of neighborhood parks for passive recreation, and would be generally within that distance for active recreation uses. The Mission Bay FSEIR added that the open space would be constructed with each phase of Mission Bay development, in the amount of at least 0.46 acres of open space for each 1.0 acre of developable area until all open space is developed. The Mission Bay FSEIR concluded that given the open space proposed near the development in each phase, that the provision of open space over the course of the Mission Bay plan area development build-out would be adequate.

In summary, the Mission Bay FSEIR identified no significant impacts to recreation from the Mission Bay plan, and accordingly, did not require any mitigation measures related to recreation.

Impact Evaluation

Existing Recreational Resources and Facilities

Impact RE-1: The proposed project would not increase the use of existing parks and recreational facilities such that substantial physical deterioration of the facilities would occur or otherwise result in physical degradation of existing recreational resources. (Less than Significant)

The San Francisco General Plan Recreation and Open Space Element (ROSE) indicates that a half mile is commonly accepted as the distance that can be comfortably walked in 10 minutes, and this distance is what most people are willing to walk to access community uses, including recreational facilities. However a 5-minute walk is more appropriate for activities that involve small children. The ROSE identifies “high needs areas” where the City should prioritize acquisition and renovation of recreational facilities based on walking distance. According to the ROSE, all of Mission Bay is within half-a-mile of passive recreational uses, and a portion of the neighborhood is within half-a-mile of active recreational uses, such as sports fields. However, much of Mission Bay is not within a quarter mile of a playground. The ROSE indicates that the planned open spaces in Mission Bay would shorten these walking distances.

The ROSE also identified high needs areas, based on population density, concentration children and senior citizens, household income, and areas of potential growth. Most of the Mission Bay neighborhood, including the project site, is generally identified as having a “lesser need.” Areas along the waterfront east and northeast of the project site are identified as having a lesser need or a moderate need.

The proposed project would result in the construction and operation of an event center, office and retail uses, parking facilities, as well as 3.2 acres of open space areas within the approximate 11-acre project site. The increase in demand for recreational facilities generated by the project would generally be consistent with that described in the Mission Bay FSEIR for the entire Plan area and would be readily met by planned parks and open space areas developed as part of the Mission Bay Plan, as well as by existing facilities in the project vicinity. In particular, in addition to the 3.2-acres of open space to be constructed as part of the project, future employees and visitors to the project site would have convenient access to the planned 6-acre Bayfront Park east of a realigned Terry A. François Boulevard (across from the project site) and a neighborhood park located along the west side of Terry A. François Boulevard south of 16th Street. Moreover, the 3.2 acres proposed as part of the project would provide some of the planned open space in the Mission Bay area that allowed it to be classified as an area of “lesser need” in the first place. The commercial uses proposed under the project would be located within the recommended 900-foot distance of open space, pursuant to the Mission Bay Plan. Furthermore, the project would not impede residential developments under the Plan from meeting the recommended quarter-mile distance from a neighborhood-serving park.

Therefore, the project would not substantially increase the use of existing parks and recreational facilities and would not lead to physical deterioration of existing recreational resources. Project impacts on recreational resources would be less than significant, and the project would not result in any new or substantially more severe impacts than those previously identified in the FSEIR.

As described in the Mission Bay FSEIR, proposed development within the Plan area would be located within recommended distances to open space and recreational facilities, and that open space areas within the Plan area would be constructed commensurate with each phase of Mission Bay development. Since publication of the FSEIR, in general, development has evolved in the Mission Bay area consistent with this approach and no substantial changes or conditions have occurred at the project site and vicinity that would result in new or more severe impacts than those described in the FSEIR.

Therefore, impacts on existing parks and recreational facilities would be less than significant.

Construction or Expansion of Recreational Facilities

Impact RE-2: The proposed project would not require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment. (Less than Significant)

As described above, the proposed project would include 3.2-acres of open space, which would directly serve the project demand for recreational facilities, and would be located in proximity to planned future parks under the Mission Bay plan area. Consequently, the project would not require the construction or expansion of recreational facilities beyond that already included under the project and under the Mission Bay plan, and the project’s effect on new or expanded recreational facilities that might have an adverse effect on the environment would be less than significant. There have been no changes in conditions or

new information available since publication of the Mission Bay FSEIR that would result in new or more severe impacts than those disclosed in the FSEIR.

Cumulative Impacts

Impact C-RE-1: The project, in combination with other past, present, and reasonably foreseeable future projects, would not result in significant adverse cumulative recreation impacts. (Less than Significant)

The geographic scope of potential cumulative impacts on recreational resources encompasses the recreational facilities in the Mission Bay Plan area. Based upon the analysis provided above, the proposed project would have a less than significant impact regarding substantial physical deterioration or degradation of existing recreational resources. The project could have a significant cumulative impact if the project in combination with past, present, and future projects in this area would increase the use of existing parks and recreational facilities such that substantial physical deterioration of the facilities would occur or otherwise result in physical degradation of existing recreational resources. However, as a program EIR, the Mission Bay FSEIR has addressed the cumulative impacts of overall development of the Mission Bay plan area on recreational resources, and the FSEIR identified no significant impacts to recreation from the Mission Bay plan, given that the plan includes substantial public open space that has been, and will continue to be constructed in phases in tandem with development of other uses called for in the plan. Thus, based on the analysis in the FSEIR, there would be no significant adverse cumulative effects on recreational resources.

Summary of Utilities and Service System Impacts in Mission Bay FSEIR

Water Supply

The Mission Bay FSEIR Community Services and Utilities setting section discussed water supply service to the Mission Bay plan area that existed at the time of preparation of the Mission Bay FSEIR. This Mission Bay FSEIR indicated the San Francisco Water Department (which has now been incorporated as part of the San Francisco Public Utilities Commission [SFPUC]) supplied water to the Mission Bay plan area, and existing water consumption in the Mission Bay plan area at that time was approximately 0.097 million gallons per day (mgd). The Mission Bay FSEIR mapped water mains that existed within the Mission Bay plan area at that time, including low pressure water lines within Third Street and 16th Street adjacent to Blocks 29-32, and bisecting Blocks 29-32 from west to east. The Mission Bay FSEIR also described the City’s Auxiliary Water Supply System (AWSS) used for firefighting, and mapped an AWSS high pressure line within Third Street adjacent to Blocks 29-32.

The Mission Bay FSEIR Community Services and Utilities impacts section estimated the Mission Bay plan would require approximately 2.9 mgd of water at build-out. The Mission Bay FSEIR also described proposed water line improvements within the Mission Bay plan area proposed as part of the Mission Bay plan, including new low pressure water lines within South Street and Terry A. François Boulevard adjacent to the project site; and recycled water (referred to in the FSEIR as "reclaimed water") lines within Third Street, South Street, Terry A. François Boulevard and 16th Street adjacent to Blocks 29-32. The Mission Bay FSEIR determined that there was adequate water supply to serve the Mission Bay plan water demand, and that with the proposed water system improvements and implementation of water conservation measures proposed as part of the plan and included as Mitigation Measures M.2a through M.02g, the plan effects on water supply would be less than significant.

The Mission Bay FSEIR also determined that with implementation of Mitigation Measure M.3, which would improve and extend the high pressure auxiliary water supply system (AWSS) within the plan area, that plan effects on emergency water supply would be less than significant.

Wastewater/Stormwater Collection and Treatment

The Mission Bay FSEIR Community Services and Utilities setting section described existing wastewater collection and treatment services serving the Mission Bay plan area at that time. The Mission Bay FSEIR reported the existing sewage generation from the Mission Bay plan area (based on the 1990 FEIR) was approximately 0.072 mgd. The Mission Bay FSEIR also mapped sewer lines that existed within the Mission Bay plan area at that time. The Blocks 29-32 site was mapped as having an existing sanitary sewer line extending south and connecting to an existing combined sewer line; existing combined sewer lines were also mapped in Third Street and 16th Street adjacent to Blocks 29-32. (see Section E.15, Hydrology and Water Quality, below, for additional information on the City’s combined sewer system and treatment plant capacity).

Mission Bay Plan Impacts at Buildout. The Mission Bay FSEIR Community Services and Utilities impacts section estimated that the Mission Bay plan would generate approximately 2.5 million mgd of wastewater at build-out (average dry weather flow). The Mission Bay FSEIR also described major sewer upgrades that were proposed as part of the Mission Bay plan within the Mission Bay plan area. The Mission Bay FSEIR indicated that the northern portion of the Blocks 29-32 (as part of the proposed Central/Bay sub-basin) would be served by proposed separate sanitary-sewer-only and storm drainage-only lines. The southern portion of Blocks 29-32 (as part of the proposed reconfigured Mariposa sub-basin) would continue to be served by the existing combined sewer system, but augmented with additional new sewer extensions (including within 16th Street east of Illinois Street adjacent to Blocks 31 and 32). (See Hydrology and Water Quality section, below, for additional detail on the proposed Mission Bay plan sewer system improvements.) The Mission Bay FSEIR determined that with the sewer system improvements proposed as part of the plan, the Mission Bay plan would accommodate the projected increases in wastewater generation and stormwater flows, and Mission Bay plan effects on wastewater and stormwater collection and treatment facilities would be less than significant.

Mission Bay Plan Interim Impacts during Phased Development. The Mission Bay FSEIR Community Services and Utilities Impacts section reported that infrastructure development of the proposed separated sewer system for the Central/Bay Basin would occur with each phase, but would not necessarily be immediately operational. The Mission Bay FSEIR indicated that as part of the Mission Bay plan and included as Mitigation Measure M.5, all stormwater runoff from newly developed areas in the Bay Basin would be conveyed to the combined sewer system prior to completion of the initial-flow diversion system, to ensure potential impacts to water quality during this interim period would remain less than significant.

Solid Waste

The Mission Bay FSEIR Community Services and Utilities setting section estimated that at the time of preparation of the FSEIR, the Mission Bay plan area generated approximately 2,700 tons of solid waste annually at that time. The Mission Bay FSEIR Community Services and Utilities impacts section estimated the Mission Bay plan would generate approximately 19,000 tons annually, of which between 12,000 and 9,700 tons annually would be disposed annually at Altamont Landfill assuming diversion rates of between 35 percent (1996 levels) and 50 percent (AB 939-required diversion rate for Year 2000), respectively). The Mission Bay FSEIR reported that the solid waste generation estimates for the Mission Bay plan were included in the landfill capacity projections for the Altamont Landfill, and concluded that the Mission Bay plan would not substantially affect the lifespan of the landfill.

Impact Evaluation

Water Supply

Impact UT-1: The City's water service provider would have sufficient water supply available to serve the project from existing entitlements and resources, and would not require new or expanded water supply resources or entitlements. (Less than Significant)

A water demand memorandum prepared by the sponsor for the proposed project indicates that estimated water demand for the currently proposed development at Blocks 29-32 would be 0.100 mgd as adjusted for water conservation measures as required under the Green Building Requirements in Chapter

13C of the 2010 San Francisco Building Code.³⁷ For outdoor water use, the project would be required to comply with further water conservation measures under the San Francisco Water Efficient Irrigation Ordinance. These requirements specify water efficiency and conservation measures for indoor and outdoor use, including establishing standards for low flow plumbing fixtures and water efficiency standards for landscape irrigation.

The project's estimated demand of 0.100 mgd is conservatively estimated to be entirely for potable water demand, although the project proposes to use recycled water for select non-potable water uses. The project sponsor has indicated that the project would have about 0.094 mgd in non-potable water demands (such as for toilets/urinals, irrigation, cooling tower, or commercial laundry).³⁸ In the future, when recycled becomes available, some of the estimated water demand could be met with recycled water for non-potable uses, which could reduce the project's potable water demand to less than 0.100 mgd.

On July 9, 2013, the SFPUC approved and adopted the Water Supply Assessment for the proposed Event Center and Mixed-Use Development Project at Piers 30-32 and Seawall Lot 330.³⁹ This Water Supply Assessment was conducted for an earlier design of the proposed project at another location in San Francisco about 1.5 miles north of the current project site. The Water Supply Assessment concluded that there are adequate water supplies in the regional water system to serve an estimated 0.109 mgd of water demand for the project and cumulative demands during normal years, single dry years, and multiple dry years from 2015 through 2035. The Water Supply Assessment also indicated that the demand of this project is encompassed within the overall San Francisco retail water demands being used for current water supply planning. Since the estimated water demand for the proposed project of 0.100 mgd is less than the 0.109 mgd identified in the Water Supply Assessment, the water demands of the project would not require new or expanded water supply resources or entitlements.

Therefore, as confirmed by the SFPUC, existing water supplies serving the City would be sufficient to meet the projected water demand of the proposed project, and the project would not trigger the need for new or expanded water supply resources or entitlements. Impacts on water supply would be less than significant, and no mitigation is necessary.

This impact determination is similar to the analysis in the Mission Bay FSEIR, which concluded that at build-out, the entire Mission Bay plan would require approximately 2.9 mgd of water supply from the SFPUC's regional water system. The SFPUC (referred to as the San Francisco Water Department in the FSEIR) determined at the time that there were adequate water supply resources to serve the Mission Bay plan area, provided that Mission Bay water users utilize reasonable water-conserving measures, as listed in FSEIR Mitigation Measure M.2. However, currently, compliance with the Green Building Requirements in Chapter 13C of the San Francisco Building Code would override and supersede FSEIR

³⁷ BKF Engineers, 2014. *Mission Bay Blocks 29-32—Water Demand Memorandum*. Technical Memorandum to Clarke Miller, Strada Investment Group from Sravan Paladugu, P.E. and Jacob Nguyen, P.E. BKF No. 20136004-20, November 14, 2014.

³⁸ BKF, 2014. *Golden State Warriors, Mission Bay Blocks 29-32, On-site Alternate Water Sources*. Technical Memorandum to Clarke Miller, Strada Investment Group, from Jacob Nguyen, P.E. BKF No. 20136004, October 22, 2014.

³⁹ SFPUC, 2013. *Water Supply Assessment for the Event Center and Mixed-Use Development Project at Piers 30-32 and Seawall Lot 330*. July 1, 2013.

Mitigation Measure M.2 with respect to required water efficiency and conservation measures, and therefore FSEIR Mitigation Measure M.2 no longer applies to the proposed project.

Thus, the proposed project would not result in new or more severe impacts on water supply than previously identified in the FSEIR.

Since publication of the Mission Bay FSEIR, no substantial changes have occurred or new information has become available that would result in new or more severe impacts on water supply. However, it should be noted that the SFPUC has revised its assessment of water supply reliability since 1998, as required and documented in an urban water management plan (UWMP), which is updated every 5 years in compliance with the Urban Water Management Planning Act. The UWMP describes the SFPUC's long-term plan for its water supplies to meet the existing and future demands of its customers during normal, dry, and multiple dry years. The SFPUC's current 2010 UWMP was issued in 2011,⁴⁰ and the 2015 UWMP will be issued in 2016. During this interim period, the SFPUC developed a 2013 Water Availability Study⁴¹ to document the SFPUC's current and projected retail water supplies⁴² when compared to projected retail water demands. Future water supply sources include one recycled water project on the eastside of San Francisco, which in contrast to the assumption in the FSEIR that recycled water would be available to the plan area by 2011, is still in the planning stages, but is projected to eventually serve non-potable uses such as irrigation and toilet flushing for portions of the eastside of the City including the project site.

Impact UT-2: The proposed project would not require or result in the construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. (Less than Significant)

As discussed in Impact UT-1, the proposed project would not result in new or more severe impacts on water supply than previously identified in the Mission Bay FSEIR. Furthermore, the SFPUC has determined in the Water Supply Assessment, that the estimated water demand for the proposed project is already encompassed within the overall San Francisco retail water demands, for which the associated regional water treatment and transmission facilities have been established.

As described above in the Section A.2, Background, the Mission Bay master developer, FOCIL-MB, LLC, is required to provide the infrastructure serving the South Plan Area. Water delivery infrastructure has been completed on the north and west sides of the project site and there are existing water mains located along Third and South Streets. In addition, there are several existing service laterals extending from the utility mains along South Street that can presumably be used to service the project site. The master developer would be required to install new water mains along 16th Street and Terry A. François Boulevard, for both domestic water and recycled water, during the major phase development associated with the proposed project, and additional service laterals extending from the utility mains along South

⁴⁰ SFPUC, 2011. *2010 Urban Water Management Plan for the City and County of San Francisco*, June 2011.

⁴¹ SFPUC, 2013. *Water Availability Study for the City and County of San Francisco*, May 2013.

⁴² The SFPUC provides water supply services to both wholesale and retail customers. The City and County of San Francisco, including the Mission Bay area, is part of SFPUC's retail customers.

Street that can presumably be used to service the project site. Additional service laterals are proposed along 16th Street and the future Terry A. François Boulevard frontage.

As part of the standard permit review process, the Mission Bay master developer, in coordination with the project sponsor, would be required to request a hydraulic analysis of the SFPUC water distribution system to confirm that the existing and planned water distribution system is adequate to meet the project's water distribution demands, including fire suppression system pressure and flow demands. If the water distribution system as approved under the Mission Bay Infrastructure Plan is inadequate to meet the project's demand, the project sponsor would be responsible for funding the construction of required new water mains and appurtenances. The construction of the new water mains and appurtenances would require excavation, trenching, soil movement, and other activities typical of construction of development projects in San Francisco, and similar to those activities analyzed in the Mission Bay FSEIR for the various infrastructure improvements. Activities required to install new water mains, if determined to be required, would be similar to those associated with construction of the project, and these activities would not result in new or more severe environmental impacts than those previously disclosed in the Mission Bay FSEIR.

This impact determination is similar to the analysis in the Mission Bay FSEIR, although the FSEIR also included Mitigation Measure M.3 recommending that the AWSS be extended into the project area as determined by the San Francisco Fire Department and Department of Public Works. However, since publication of the FSEIR, the SFPUC's City Distribution Division currently owns and operates the AWSS (not the San Francisco Fire Department), and a number of infrastructure improvements needed to serve the project site have already been completed, including a high pressure water main along Third Street, bordering the project site. As described above, the Mission Bay master developer, in coordination with the project sponsor would be required to request a hydraulic analysis of the SFPUC water distribution system to confirm that the water distribution system as approved under the Mission Bay Infrastructure Plan is adequate to meet the project's fire suppression system pressure and flow demands; and if the analysis determines the system to be inadequate, the project sponsor would be responsible for the costs of construction of required new water mains and appurtenances. Thus, FSEIR Mitigation Measure M.3 has been superseded by the completion of the high pressure water main in Third Street and does not apply to the proposed project.

Therefore, the proposed project would not require or result in the construction of new or expanded water mains that would cause significant environmental effects, and this impact would be less than significant. The proposed project would not result in new or more severe impacts associated with construction of new water facilities or pipelines than previously identified in the FSEIR.

Solid Waste

Impact UT-3: The proposed project would be served by landfills with sufficient permitted capacity to accommodate the project's solid waste disposal needs. (Less than Significant)

Under the proposed project, as shown in **Table 3**, the proposed project would generate approximately 2,211 tons of solid waste per year.

**TABLE 3
ESTIMATED ANNUAL PROJECT-GENERATED SOLID WASTE**

Proposed Use ¹	Square Footage	Solid Waste Generation Rate ²	Solid Waste Generation (tons/yr)
Event Center	750,000	1.29 tons/1000 sf-yr	968
Retail	125,000	2.0 lb/100 sf-d	456
Office	605,000	1 lb/100 sf-d	787
Total			2,211

NOTES:

¹ See Table 1 of this Initial Study.

² Solid waste generation factor for the event center based on rates used in the Sacramento Entertainment and Sports Center & Related Development EIR, 2013. Generation rates for retail and office based on rates used in the Mission Bay FSEIR, Table L.2. Retail assumed to operate 365 days a year; Office uses assumed to operate 260 days a year.

Since publication of the Mission Bay FSEIR, a number of changes have occurred with respect to solid waste disposal in the City, as described below, all of which would serve to reduce the total volume of solid waste to be disposed of in a landfill.

In 2002, the City adopted a Zero Waste Goal, which included a 75 percent landfill diversion goal citywide by 2010 and the goal of achieving zero waste to landfill by 2020, such that all discarded materials be diverted from landfills through recycling, composting or other means. The City achieved its 75 percent landfill diversion goal by 2008 through implementation of numerous programs and efforts. In 2006, the City adopted the Construction and Demolition Waste Ordinance mandating the recycling of construction and demolition debris. Effective since 2007, the City's Food Service Waste Reduction Ordinance prohibits any establishment that serves food prepared in San Francisco from using polystyrene foam containers, and requires any containers to be either recyclable or compostable. In 2009, the City adopted a Mandatory Recycling and Composting Ordinance, which requires all San Francisco residents and commercial landlords to separate their refuse into recyclables, compostables, and trash, thereby minimizing solid waste disposal and maximizing recycling. In addition, Chapter 13B of the San Francisco Building Code requires that all construction and demolition debris in amounts of one cubic yard or greater must be managed by a registered facility for recovery of the materials.

The Mission Bay FSEIR estimated that total solid waste generated by development under the Mission Bay plan at buildout would be approximately 19,000 tons per year for the entire plan area. However, compliance with all of the above changes in requirements for solid waste disposal since publication of the FSEIR would reduce the volume of solid waste requiring disposal in a landfill. Thus, given these changes, it would be expected that the current annual volume of solid waste would be less than what was projected in the FSEIR, thereby *reducing* the severity of the impact described in the FSEIR.

In addition, the Mission Bay FSEIR indicated that solid waste generated by development under the Mission Bay plan at buildout could be accommodated by the Altamont Landfill. However, the City's contract with the Altamont Landfill, which is based on volume of material disposed of, is anticipated to expire in 2015.

The City is currently conducting solid waste planning efforts and participating in the environmental review process for a potential future landfill contract to a Recology subsidiary for shipment of solid waste by truck and rail to the Recology Ostrom Road Landfill in Yuba County. This facility currently can accept 3,000 tons per day. It has an expected closure date of 2066 with a total design capacity of more than 41 million cubic yards. The City is also conducting environmental review of a short-range plan to haul solid waste to the Recology Hay Road Landfill in Solano County. The Recology Hay Road Landfill is permitted to accept up to 2,400 tons per day of solid waste and has capacity to accommodate solid waste until approximately 2050.

Despite these change in circumstances relative to disposal of solid waste generated by the Mission Bay plan at buildout, the proposed project would not result in new or substantially more severe impacts than those identified in the Mission Bay FSEIR. Compliance with the multiple City ordinances requiring reduction in solid waste for landfill disposal as well as the ongoing commitment of the City to secure a long-term landfill contract at an alternate location from the Altamont Landfill would ensure that the project would be served by landfills with sufficient permitted capacity to accommodate the project's solid waste disposal needs. Furthermore, the project would be designed to achieve a LEED Gold certification, which may be achieved through commitment to specific waste-reduction measures. These actions would reduce the volume of long-term waste generated by the proposed project. Therefore, this impact would be less than significant and no mitigation would be required.

Impact UT-4: The proposed project would comply with federal, state, and local statutes and regulations related to solid waste. (Less than Significant)

The Mission Bay FSEIR did not specifically address compliance with solid waste regulations. However, as discussed below, potential impacts associated with this issue would be less than significant.

The California Integrated Waste Management Act of 1989 required municipalities to adopt an integrated waste management plan to divert 75 percent of waste by 2010. The City of San Francisco achieved a 77-percent landfill diversion rate for 2008, exceeding the plan's goal by two years. Under Senate Bill 1016, the City's per resident disposal target rate is 6.6 pounds per person per day (PPD), and its per employee disposal target rate is 10.6 PPD. Both of these targeted disposal rates were met, with San Francisco generating about 2.9 pounds/resident/day and about 4.4 pounds/per employee/per day.

San Francisco Ordinance No. 27-06 requires a minimum of 65 percent of all construction and demolition debris to be recycled and diverted from landfills, and Chapter 13B of the San Francisco Building Code requires that all construction and demolition debris in amounts of one cubic yard or greater must be managed by a registered facility for recovery of the materials. Furthermore, the project would be required to comply with City Ordinance 100-09, the Mandatory Recycling and Composting Ordinance, which requires everyone in San Francisco to separate their refuse into recyclables, compostables, and trash. The Altamont and Recology Ostrom and Hay Road Landfills are required to meet federal, state and local solid waste regulations. The proposed project would be required to adhere to these regulations. Implementation of the proposed project would not impede the City from meeting solid waste regulations, and the impact would be less than significant.

Cumulative Impacts

Impact C-UT-1: The project, in combination with other past, present, and reasonably foreseeable future projects, would not result in significant adverse cumulative utilities and service systems impacts. (Less than Significant)

The geographic contexts for impacts to utilities and service systems are the service areas for the applicable service providers. The proposed project, when combined with past, present, and reasonably foreseeable future development, would increase demand for water and solid waste disposal services of these providers.

Water Supply. As described in Impact UT-1, the SFPUC has adopted a Urban Water Management Plan (2010) that addresses the future water supply needs of its entire service area, as well as a 2013 Water Availability Study that addresses the future water supply for its retail customers, primarily the City and County of San Francisco. As stated above, the SFPUC has indicated that the water supply service to the proposed development at the site has already been incorporated into its water supply planning when considering the existing and future water demands for its entire service area. Therefore, the project would not contribute to a cumulative impact on water supply.

Solid Waste. As stated above, the City and County of San Francisco intends to achieve zero waste to landfill by 2020. Increased waste generation from the project and cumulative development would be partially offset by existing San Francisco ordinances and policies regarding waste reduction. Therefore, the increased generation of solid waste from these developments would not exceed permitted landfill capacity.

As such, the proposed project would not contribute to significant cumulative impacts on water supply and solid waste utilities and service systems.

Issues to be analyzed in the SEIR

The impact evaluation above explains why the proposed project would not result in new significant impacts or substantially increase the severity of impacts on water supply and solid waste utilities and service systems—with respect to criteria E.11 (b), (d), (f), and (g), and no further analysis is required on these subjects. However, with respect to criteria E.11(a), (b), (c), and (e) as they pertain to wastewater facilities, additional evaluation of the proposed project is necessary for both project and cumulative impacts related to wastewater and stormwater collection and treatment. In concert with the further analysis of hydrology and water quality issues, the SEIR will include a detailed analysis of:

- The potential for wastewater and/or stormwater generated by the project to result in exceedances of wastewater treatment requirements of the RWQCB
- The potential for wastewater and/or stormwater generated by the project to require the construction of new or expanded wastewater treatment or stormwater drainage facilities, the construction of which could cause environmental effects. This analysis will also discuss the applicability of FSEIR Mitigation Measure M.5 regarding stormwater management.
- The potential for the project to result in a determination by the SFPUC that it has inadequate capacity to serve the project demand for wastewater treatment.

<u>Topics:</u>	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
12. PUBLIC SERVICES— Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of, or the need for, new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any public services such as schools, parks, or other services?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in substantial adverse physical impacts associated with the provision of, or the need for, new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any public services such as fire protection or police protection?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Issues related to parks, which is referred to in criterion E.12 (a), are addressed above in Section E.10, Recreation.

Summary of Public Services Impacts in Mission Bay FSEIR

Fire and Police Protection

The Mission Bay FSEIR Community Services and Utilities setting section characterized existing fire and police protection services serving the Mission Bay plan area and surrounding area at that time. The Mission Bay FSEIR noted that there were no San Francisco Fire Department (SFFD) fire stations operating within the Mission Bay plan area at that time, however, the plan area was served by up to six surrounding fire stations. The Mission Bay FSEIR also reported that the Mission Bay South area was located within the San Francisco Police Department’s Bayview District, whose police station was located over 2½ miles south of the plan area.

The Mission Bay FSEIR Community Services and Utilities impacts section determined that the Mission Bay plan would potentially significantly increase demand for fire protection services in the Mission Bay plan area, and that a new fire station and additional fire department personnel and equipment, including a Hazardous Materials Unit, would be required in the Mission Bay South plan area at build-out in order to facilitate access in the event of a major emergency, and maintain adequate levels of service. The FSEIR also indicated the Mission Bay plan would increase demand for a new police station and additional police protection personnel.

The Mission Bay plan included the provision of land at the corner of Third Street and Mission Rock Street in the Mission Bay plan area for a new police/fire station. The Mission Bay FSEIR determined that with implementation of Mitigation Measures M.6a (Construct New Fire Station) and M.6b (Provide New Engine Company) to ensure funding for additional fire protection personnel, equipment and fire station, impacts to

fire protection services would be less than significant. Furthermore, the Mission Bay FSEIR determined that the new police station proposed under the Mission Bay plan would increase community involvement and lower crime rates in the Mission Bay plan area and ensure impacts to police protection services would be less than significant. Potential impacts associated with the construction and operation of the new police/fire station itself were included in the overall analysis of the Mission Bay plan in the FSEIR.

Public Schools

The Mission Bay FSEIR Community Services and Utilities setting section described existing San Francisco Unified School District (SFUSD) school services, and noted that there were no public schools operating in the Mission Bay plan area at the time of preparation of the Mission Bay FSEIR.

The Mission Bay FSEIR Community Services and Utilities impacts section indicated the Mission Bay plan residential population would increase the demand on the San Francisco Unified School District (SFUSD). The Mission Bay FSEIR estimated that at full build-out, the Mission Bay plan residential uses would create approximately 1,615 school-age children residing in the Mission Bay plan area, including approximately 730 students of elementary school age, and approximately 75 percent of these students would be expected to attend public schools.

The Mission Bay plan included the transfer of land within the plan area for a new 500-student elementary school to the SFUSD prior to issuance of building permits for the Mission Bay plan residential units. On this basis, the Mission Bay FSEIR concluded that Mission Bay plan impacts to public schools would be less than significant. Potential impacts associated with the construction and operation of the new school were included in the overall analysis of the Mission Bay plan in the Mission Bay FSEIR.

The Mission Bay FSEIR also determined the proposed school site within the Mission Bay plan area would not be large enough to house a middle school or high school, or all of the potential new elementary school students, and consequently, that additional classroom space would need to be developed by SFUSD outside of the Mission Bay plan area, most likely for all grade levels. The Mission Bay FSEIR concluded it was too speculative to identify impacts from construction of additional school facilities, although any new facilities that would be proposed by SFUSD would be subject to appropriate environmental review for site-specific physical environmental impacts.

Other Public Services

The Mission Bay FSEIR Community Services and Utilities section and Initial Study determined that Mission Bay plan effect on public health services, childcare services, library services, street maintenance services, and emergency medical services would be less than significant, and consequently, the Mission Bay FSEIR did not require any mitigation measures for these topics.

Impact Evaluation

Schools and Other Services

Impact PS-1: The proposed project would not result in substantial adverse physical impacts associated with the provision of or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for schools or other services. (Less than Significant)

The proposed project does not include any residential uses, and therefore would not increase the demand for schools. Thus, the project would have no effect on public schools. Similarly, because the project does not include any residential uses, the project's effect on demand on other services (such as public health, childcare, library, street maintenance, and emergency medical) would be within the assumptions analyzed in the Mission Bay FSEIR for the entire plan area. The project would not result in any new or substantially more severe impacts on schools or other services than those previously identified in the FSEIR. Further, no substantial changes or conditions have occurred at the project site and vicinity that would result in new or more severe impacts than those described in the FSEIR.

Cumulative Impacts

Impact C-PS-1: The project, in combination with other past, present, and reasonably foreseeable future projects, would not result in significant adverse cumulative impacts on schools or other services. (Less than Significant)

The geographic scope of potential cumulative impacts on schools and other services encompasses the Mission Bay plan area. As a program EIR, the Mission Bay FSEIR has addressed the cumulative impacts of overall development of the Mission Bay plan area on schools and other services, and the FSEIR identified no significant impacts from the Mission Bay plan. Thus, based on the analysis in the FSEIR, there would be no significant adverse cumulative effects on schools and other services.

Issues to be Addressed in the SEIR

Further discussion of potential impacts on law enforcement and fire protection services associated with construction and operation of the event center and associated development at the project site will be included in the SEIR, including the applicability of FSEIR Mitigation Measures M.6a (Construct New Fire Station) and M.6b (Provide New Engine Company). Although construction of the new Public Safety Building at Third and Mission Rock Streets is completed and will be operational in early 2015, and satisfies the requirements of these mitigation measures, the SEIR will provide a project-specific analysis of the impacts on law enforcement and fire protection services and adequacy of these mitigation measures to reduce project impacts to less than significant.

Topics:	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
13. BIOLOGICAL RESOURCES— Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

There are no applicable adopted habitat conservation plans, natural community conservation plans, or other approved habitat conservation plans that apply to the project site. Therefore, criterion E.13(f) does not apply to the proposed project, and this topic is not discussed further in this Initial Study or in the SEIR.

Summary of Biological Resource Impacts in Mission Bay FSEIR

The biological resources significance criteria were addressed in the Mission Bay FSEIR in the Initial Study Biology section and the China Basin Channel Vegetation and Wildlife section. Relevant information from these sections is summarized below.

The Mission Bay FSEIR Initial Study Biology section evaluated biological resource conditions present in the Mission Bay plan area at that time. The Mission Bay FSEIR Initial Study reported that the upland portion of Mission Bay South was mostly disturbed and sparsely vegetated, and did not contain substantial numbers of mature or scenic trees. Vegetative mapping of the Mission Bay plan area included in the Mission Bay FSEIR indicates Blocks 29-32 did not contain any notable vegetative habitat. The Mission Bay FSEIR Initial Study determined no state-listed threatened, endangered or rare plants, or rare, threatened or endangered animal species were known to occur in the upland portion of the Mission Bay

plan area, as confirmed by biological field surveys. Consequently, the Mission Bay FSEIR identified no significant project impacts to upland plant and wildlife in the Mission Bay plan area, and accordingly, did not require any mitigation measures related to these resources.

Although not within the Blocks 29-32 vicinity, the Mission Bay FSEIR also analyzed potential impacts to aquatic and wetland habitats of China Basin Channel. The Mission Bay FSEIR China Basin Channel Vegetation and Wildlife section determined that significant impacts resulting from disturbance and removal of salt marsh wetland habitat resulting from installation of rip-rap and utilities in the Channel would be mitigated to a less than significant level through preparation and implementation of a salt marsh habitat mitigation plan in accordance with the Section 404 permit process of the U.S. Army Corps of Engineers. In addition, the Mission Bay FSEIR determined that significant impacts to herring reproduction from turbidity in the water of the Channel or Bay would be mitigated to a less than significant level by avoiding construction activities affecting turbidity during the herring spawning season, and, at other times, use of shallow-draft tugboats and barges with enforced speed limits and implementing a plan for minimizing turbidity during removal of existing piles.

Please see also, Hydrology and Water Quality, below, for discussion of potential Mission Bay plan effects on aquatic biota from treated wastewater and stormwater discharge, and sediment; and Hazards and Hazardous Materials, for a discussion of potential Mission Bay plan effects on aquatic biota from the presence of chemicals in construction dust.

Impact Evaluation

Special Status Species

Impact BI-1: The proposed project would not have a substantial adverse effect, either directly or through habitat modification, on any special status species. (Less than Significant)

A qualified biologist conducted a site reconnaissance on August 28, 2014. The reconnaissance visit consisted of a pedestrian survey within the project site's boundary and visual observations of the adjacent environments to identify suitable habitat or supportive communities for special-status⁴³ plant and wildlife species. General habitat conditions were noted and incidental species observations were recorded. Prior to the reconnaissance survey, a review of database queries was conducted for special-status species occurrences documented in the regional project vicinity (i.e. San Francisco County, San Francisco North and San Francisco South 7.5-minute U.S. Geological Survey quadrangles) including the California Department of Fish and Wildlife's (CDFW⁴⁴) California Natural Diversity Database (CNDDDB), U.S. Fish and Wildlife Service (USFWS), and California Native Plant Society (CNPS). Lists compiled of sensitive plant and animal species from these databases document 34 sensitive plant species

⁴³ The term "special-status" species includes those species that are listed and receive specific protection defined in federal or state endangered species legislation, as well as species not formally listed as Threatened or Endangered, but designated as "Rare" or "Sensitive" on the basis of adopted policies and expertise of state resource agencies or organizations, or local agencies such as counties, cities, and special districts. A principal source for this designation is the California "Special Animals List".

⁴⁴ The California Department of Fish and Game (CDFG) changed its name on January 1, 2013 to the California Department of Fish and Wildlife (CDFW). In this document, references to literature published by CDFW prior to Jan. 1, 2013 are cited as 'CDFG, [year]'. The agency is otherwise referred to by its new name, CDFW."

and 41 animal species within the regional vicinity of the project site. Of these 75 special-status species, none were determined to have a moderate or high potential to occur on the proposed project site due to the lack of suitable habitat or supportive vegetation communities which these species require for sustained use (see Appendix A of this Initial Study).

The project site is located in a dense urban setting and currently does not contain desirable habitat that could support sensitive species. The project site currently contains two paved parking lots in the north and west portions of the site, and the remainder of the site consists of an undeveloped ruderal lot largely covered in gravel and surrounded by chain link fencing. Vegetation within the ruderal lot is sparse and dominated by non-native annual grasses and opportunistic weedy species which thrive in such ruderal environments and include, foxtail brome (*Bromus madritensis*), riggut brome (*Bromus diandrus*), soft brome (*Bromus hordeaceus*), Italian rye grass (*Festuca perennis*), rattail sixweeks grass (*Festuca myuros*), Bermuda grass (*Cynodon dactylon*), fennel (*Foeniculum vulgare*), pampas grass (*Cortaderia jubata*), bristly ox tongue (*Helminthotheca echioides*), black mustard (*Brassica nigra*), stinkwort (*Dittrichia graveolens*), white sweetclover (*Melilotus albus*), cut leaf plantain (*Plantago coronopus*), and cheeseweed (*Malva parviflora*). Native prostate coyote bush (*Baccharis pilularis*) was also prevalent throughout the site. Birds commonly found in such areas with limited habitat value are seed-eating and include non-native species such as English sparrow (*Passer domesticus*) and European starling (*Sturnus vulgaris*) as well as birds native to the area, including house finch (*Haemorhous mexicanus*), lesser goldfinch (*Spinus psaltria*), Brewer's blackbird (*Euphagus cyanocephalus*), and rock pigeon (*Columba livia*). Evidence of Canada goose (*Branta canadensis*) is present on the site.

As discussed in the Section A, Project Description, on the project site, immediately east of, and adjacent to, Parking Lot B, is a depression (measuring approximately 320 feet by 280 feet) created by excavation and backfill associated with prior environmental cleanup of that portion of the site. Site reconnaissance revealed the deepest part of the excavation within this area contains standing water with a mixture of ruderal vegetation described above, and wetland plants, including alkali bullrush (*Bolboschoenus maritimus*), brass buttons (*Cotula coronopifolia*), fat-hen (*Atriplex prostrata*), and saltgrass (*Distichlis spicata*), present around its perimeter. The standing water supports common wildlife as evidenced by a snowy egret (*Egretta thula*) hunting at the water's edge and a black phoebe (*Sayornis nigricans*) sallying insects from a vegetative perch. These features are discussed in further detail under Impact BI-3.

Based on the data above and similar to the conclusions of the Mission Bay FSEIR for the entire plan area, the proposed project would not have a substantial adverse effect on special status species due to the lack of suitable habitat, as summarized in Appendix A. This impact would be less than significant, and no mitigation is required. Thus, the project would not result in any new impacts, or increase the severity of previously-identified impacts, to special-status species.

At the time of preparation of the Mission Bay FSEIR, the project site contained several buildings and facilities and was noted as lacking any notable vegetative habitat, with no state-listed threatened, endangered or rare plants, or rare, threatened or endangered animal species known to occur in the upland portion of the Mission Bay plan area, including the project site. Subsequent to that time, the project site has been subject to building removal, grading, excavation, and construction of paved surface parking lots, fencing and utilities on portions of the site. Other than the creation of the depression as a result of remediation actions, no other changes in the site since the preparation of the FSEIR have altered

the characteristics of the site in relation to biological habitat. These changes in conditions on the project site have not altered the fact that the site provides no suitable habitat for any sensitive or special-status species due to the sparse and ruderal nature of onsite vegetation, as well as the site's location in a densely urbanized environment, as confirmed through the reconnaissance survey and database review of special-status species occurrences within the vicinity of the project site. In addition, there have been no substantial changes with respect to the circumstances under which the project would be undertaken, nor has any new information become available that demonstrates new or more severe impacts associated with the proposed project.

On the basis of the factors discussed above, the project would not have any new or substantially more severe effects than those identified in the Mission Bay FSEIR on special status species. Furthermore, the Mission Bay FSEIR did not identify any alternatives to reduce impacts to special-status species. Consequently, no new or different mitigation measures or alternatives to reduce project impacts to special-status species are identified or required with respect to the currently proposed project.

Sensitive Natural Communities

Impact BI-2: The proposed project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations. (No Impact)

As described in Impact BI-1, above, the project site currently does not contain riparian habitat or other sensitive natural community, which is consistent with the description in the Mission Bay FSEIR of no notable vegetative habitat in the project area. Thus, the project would have no impact on any riparian or other sensitive natural community. No changes in conditions at the project site or any new information has become available that would result in new or more severe impacts associated with the proposed project with respect to sensitive natural communities.

Wetlands

Impact BI-3: The proposed project would not have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act or navigable waters as defined in Section 10 of the Rivers and Harbors Act through direct removal, filling, hydrological interruption, or other means. (Less than Significant)

As described above in Impact BI-1, the deeper excavation and surrounding shallow depressions within the project site are features that exhibit the hydrology and vegetation characteristics of wetlands. Hydric soil is presumed present due to the year-round inundation and presence of some obligate wetland plants. The deeper excavation is at a sufficient depth to intersect groundwater and a review of aerial imagery reveals water within the deeper excavation year round, while the shallow depressions appear to be seasonally wetted.⁴⁵ Vegetation composition within the deeper excavation differ from the upland, ruderal portions of the site and include several species that commonly occur in wetlands such as alkali bulrush,

⁴⁵ Google aerial imagery, 2007-2014.

brass buttons, and fat-hen. Vegetation within the shallow depressions included a combination of saltgrass and Bermuda grass which can be found in both upland and wetland communities.

The jurisdictional status of the deeper excavation and surrounding shallow depressions has not been determined. This topic was addressed in a technical report prepared by the project sponsor's biological consultant⁴⁶, which discussed the origin of these features and how they conform to criteria for jurisdiction under the federal Clean Water Act. The report concluded that the noted features may be exempt from regulatory jurisdiction under the Clean Water Act due to their creation incidental to construction activities⁴⁷, even if they meet some technical criteria for jurisdictional wetlands. Specifically, the report states that the deeper excavation and shallow depressions within the project site may fall under the following exemption:

“Water-filled depressions created in dry land incidental to construction activity and pits excavated in dry land for the purpose of obtaining fill, sand, or gravel unless and until the construction or excavation operation is abandoned and the resulting body of water meets the definition of waters of the United States.”⁴⁸

Alternatively, because it contains ponded areas and supports wetlands plants, the excavation feature could be determined to be waters of the U.S. and/or waters of the state. Isolated ponded areas, even if artificially created, could also be determined to be waters of the state under the San Francisco RWQCB's Basin Plan as they can provide beneficial cover or foraging habitat for wildlife.⁴⁹

The overall value of Blocks 29-32 to support or sustain wildlife is limited due to the sparse and ruderal nature of onsite vegetation, as well as the site's location in a densely urbanized environment. While several bird species were observed foraging and hunting onsite, these species are common to San Francisco and would continue to be supported by vegetation communities and water features found in the project vicinity. Because the excavation depressions on the site are small, isolated features resulting from recently completed hazardous materials remediation activities and are surrounded by paved areas and urban development, these features do not provide the important biological habitat functions and values that are typically associated with federally protected wetlands. As such, the proposed removal of these features would not constitute a significant adverse impact on wetland habitat resources.

⁴⁶ WRA, 2014. *Construction Related Depressions at Golden State Warriors Mission Bay Site*, San Rafael, CA. Prepared for Golden State Warriors, October 1.

⁴⁷ The report discusses that under Regional Water Quality Control Board (RWQCB) Order R2-2005-0028, a portion of the project site underwent construction activities associated with the remediation of hazardous materials. The report describes that following excavation of the portion of the project site subject to remediation activities in 2005 and 2006, groundwater monitoring was required by the RWQCB between 2007 and 2013 to ensure the affected area met applicable standards for remediation. The report notes that partial backfilling of the excavated area occurred during the period of groundwater monitoring of the project site, however, a proposal to develop an office building with partial basement on the project site (that would have necessitated re-excavation of backfill materials from the excavation area), and unfavorable economic conditions, halted further backfilling of the excavated area. Based on post-remediation groundwater monitoring, RWQCB issued Order No. R2-2014-0022 attaining site closure.

⁴⁸ Preamble to the CWA Regulations (33 CFR Parts 320 through 330), published in the Federal Register on November 13, 1986 (51 Fed. Reg. 41206):

⁴⁹ California Regional Water Quality Control Board (RWQCB), 2013. *Water Quality Control Plan (Basin Plan) for the San Francisco Bay Basin*. Oakland, CA.

In the event that regulatory agencies determine that one or more of these features are jurisdictional, as part of the permitting process they may require mitigation to achieve “no net loss” of the function and values of the features. To achieve this performance standard, the following mitigation options could be implemented as compensation for project-related impacts to jurisdictional waters:

- Purchase of appropriate amount of credits at an approved wetlands mitigation bank;
- Payment into an approved in-lieu fee program to preserve or restore wetlands in the same watershed; or
- Provision of off-site mitigation.

The discussion above is consistent with the conclusions of the Mission Bay FSEIR for the entire plan area. The proposed project would not have a substantial adverse effect on identified federally protected wetlands as defined by Section 404 of the Clean Water Act, or navigable waters as defined in Section 10 of the Rivers and Harbors Act, or beneficial uses of wetlands according to the Basin Plan. This impact would be less than significant, and no mitigation is required. Thus, the project would not result in any new significant impacts, or increase the severity of previously-identified impacts, to wetlands.

Wildlife

Impact BI-4: The proposed project could interfere substantially with the movement of native resident or migratory wildlife species resident or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites. (Less than Significant with Mitigation)

The Mission Bay FSEIR did not specifically address the issue of migratory wildlife species. However, as discussed below, potential impacts associated with this issue would be mitigated to less than significant with implementation of standard mitigation measures.

Breeding Birds. Migratory and resident birds which breed locally in San Francisco have the potential to nest in shrub vegetation observed within the project site. While overall habitat is of marginal quality due to its urban context and disturbed soils, the composition of non-native vegetation can be attractive to seed eating birds, and the presence of native coyote bush, alkali bulrush and non-native pampas grass can provide cover and nesting substrate for smaller passerine species. Migratory birds are protected under the Migratory Bird Treaty Act and native resident nongame birds and their nests are protected from take under the California Fish and Game Code. Breeding birds which may nest within the project site could be adversely affected by project construction. Implementation of **Mitigation Measure M-BI-4a, Preconstruction Surveys for Nesting Birds**, would avoid disrupting or destroying active nests which could occur within the proposed project site during bird breeding season, and would reduce this impact to less than significant.

Avian Collisions with Buildings and Night Lighting. The project site is located within the Pacific Flyway along the western shoreline of San Francisco Bay. The waters of the Bay provide valuable stopover habitat for migratory birds. Open space, even in highly urbanized areas, creates potential bird habitat, and open space such as the open Bay in proximity to the proposed new buildings may increase the risk of bird collisions over that posed by existing structures, particularly from large amounts of reflective or artificially lighted surfaces. Many bird collisions are induced by artificial night lighting. The

tendency of birds to move towards lights at night when migrating, and their reluctance to leave the sphere of light influence for hours or days once encountered, has been well documented.⁵⁰ Development of the proposed project would increase the amount of light and glare generated at the project site and vicinity, including from building facades, internal night lighting sources visible through windows of building exteriors, new streetlights and pedestrian lights within and adjacent to the site, nighttime lighting of building exteriors and signs, potential video screens, and headlights from project-generated traffic.

Similar to the conclusion reached for the Bay Bridge Lighting project,⁵¹ due to the surrounding urban setting, the proposed project is not expected to appreciably increase the overall amount of lighting along the San Francisco waterfront as a whole (considering existing nighttime lighting conditions within Mission Bay, at AT&T Park and other shoreline locations). In addition, the project sponsor proposes to incorporate bird-safe measures that would reduce the potential effects of the project on birds. Nevertheless, given the preliminary nature of the project development, it cannot be concluded at this time that the proposed project building and associated lighting design would not have the potential to negatively affect birds.

The San Francisco Planning Department adopted *Standards for Bird-Safe Buildings* in 2011, adding Planning Code Section 139.⁵² These standards guide the use and types of glass and façade treatments, wind generators and grates, and lighting treatments. The standards include requirements for bird-safe glazing and lighting in structures or at sites that represent a hazard to birds. While development within the Mission Bay plan area, including the project site, is not subject to the *Standards for Bird-Safe Buildings* or Planning Code Section 139, given the preliminary nature of the project design, and the remaining potential for the proposed building and/or lighting design to result in potential bird hazards, implementation of bird safe practices consistent with the City's *Standards for Bird-Safe Buildings* and Planning Code Section 139 is included as mitigation for the proposed project (**Mitigation Measure M-BI-4b, Bird Safe Building Practices**).

With implementation **Mitigation Measures M-BI-4a, Preconstruction Surveys for Nesting Birds, and M-BI-4b, Bird Safe Building Practices**, the project would not result in any new or substantially more severe significant impacts on resident or migratory bird species than those identified in the FSEIR.

Mitigation Measure M-BI-4a: Preconstruction Surveys for Nesting Birds

To the extent practicable, vegetation removal and grading of the site in advance of new site construction shall be performed between September 1 and January 31 in order to avoid breeding and nesting season for birds. If these activities cannot be performed during this period, a preconstruction survey of onsite vegetation for nesting birds shall be conducted by a qualified biologist.

⁵⁰ Gauthreaux, S.A., Belser, C.G., 2006, Effects of Artificial Night Lighting on Migrating Birds, In: Rich, C. and Longcore, T., *Ecological Consequences of Night Lighting*, Island Press, Covelo, CA, pp. 67–93.

⁵¹ H.T. Harvey and Associates. 2012. Final Assessment of the Potential Impacts of the Bay Bridge Lighting Project on Birds and Fish (HTH #3305-01). Letter report to Meryka Plumer, David J. Powers & Associates, Inc., 5 April, 2012.

⁵² San Francisco Planning Department, *Standards for Bird-Safe Buildings*, available: http://www.sf-planning.org/ftp/files/publications_reports/bird_safe_bldgs/Standards%20for%20Bird%20Safe%20Buildings%20-%202011-30-11.pdf, 2011.

In coordination with the OCII or its designated representative, pre-construction surveys of onsite vegetation shall be performed during bird breeding season (February 1 – August 31) no more than 14 days prior to vegetation removal, grading, or initiation of construction in order to locate any active passerine nests within 250 feet of the project site and any active raptor nests within 500 feet of the project site. Surveys shall be performed in accessible areas within 500 feet of the project site and include suitable habitat within line of sight as access is available. If active nests are found on either the project site or within the 500-foot survey buffer surrounding the project site, no-work buffer zones shall be established around the nests. Buffer distances will consider physical and visual barriers between the active nest and project activities, existing noise sources and disturbance, as well as sensitivity of the bird species to disturbance. Modification of standard buffer distances, 250 feet for active passerine nests and 500 feet for active raptor nests, will be determined by a qualified biologist in consultation with the California Department of Fish and Wildlife (CDFW). No vegetation removal or ground-disturbing activities including grading or new construction shall occur within a buffer zone until young have fledged or the nest is otherwise abandoned as determined by the qualified biologist.

If construction work during the nesting season stops for 14 days or more and then resumes, then nesting bird surveys shall be repeated, to ensure that no new birds have begun nesting in the area.

Mitigation Measure M-BI-4b: Bird Safe Building Practices

The project sponsor shall design and implement the project consistent with the San Francisco *Standards for Bird-Safe Buildings* and Planning Code Section 139, as approved by OCII. OCII shall consult with the Planning Department and the Zoning Administrator concerning project consistency with Planning Code Section 139.

Biological Resources Policies or Ordinances

Impact BI-5: The proposed project would not conflict with any applicable local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. (Less than Significant)

The Mission Bay FSEIR did not specifically address potential conflicts or compliance with local policies or ordinance protection biological resources. However, as discussed below, potential impacts associated with this issue would be less than significant, and no mitigation is required. Therefore, there would be no new or substantially more severe significant impacts than those identified in the FSEIR.

The City's Urban Forestry Ordinance protects San Francisco's street trees, significant trees and landmark trees regardless of species. There are no mature trees within the project site, including landmark trees, significant trees, or street trees. Although the Mission Bay FSEIR did not specifically address this issue, this impact would be less than significant because no tree removal is proposed as part of the project. Furthermore, the project would not preclude the ability of the City to plant trees in a sidewalk or public right-of-way along the project site perimeter, and the project would not conflict with this ordinance. There are no other applicable local policies or ordinances that apply to this site.

Thus, the project would not conflict with applicable local policies or ordinances protecting biological resources, and this impact would be less than significant.

Cumulative Impacts

Impact C-BI-1: The project, in combination with other past, present, and reasonably foreseeable future projects, would not result in significant adverse cumulative impacts on biological resources. (Less than Significant)

The geographic scope of potential cumulative impacts on biological resources encompasses the species occurrences, habitats, and sensitive natural communities within the regional vicinity of the project site, including the portion of the Pacific Flyway along the City's Bay shoreline. Cumulative impacts are considered in the context of past, present and reasonably foreseeable project in this area—such as those listed above under Approach to Analysis—that could contribute to impacts on biological resources.

As described above in Impacts BI-1, BI-2, BI-3, and BI-4, the project site currently consists of either paved or undeveloped ruderal areas, with one notable depressed area containing some standing water, and overall habitat supportive of sensitive wildlife and plants is of marginal quality. With the exception of birds, the project, like other projects within the City's urbanized waterfront area, would have little or no potential to affect sensitive plants or wildlife, and therefore would not contribute to cumulative impacts on biological resources in the project area.

The proposed project could potentially result in adverse effects on various bird species through disruption of nests, collisions with buildings, or disorientation from night lighting. These impacts, in combination with other projects along the San Francisco waterfront, could potentially result in cumulative impacts to birds. However, other projects in San Francisco would be subject to the same environmental review requirements to provide mitigation for birds protected under the Migratory Bird Treaty Act and California Department of Fish and Game Code. Implementation of **Mitigation Measures M-BI-4a, Preconstruction Surveys for Nesting Birds, and M-BI-4b, Bird Safe Building Practices**, would not only reduce the project's impacts to less than significant, it would also reduce the project's contribution to any cumulative impact to less than significant.

Topics:	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
14. GEOLOGY AND SOILS—				
Would the project:				
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? (Refer to Division of Mines and Geology Special Publication 42.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Topics:	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Be located on geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code, creating substantial risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Change substantially the topography or any unique geologic or physical features of the site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Mission Bay FSEIR did not specifically address having soils capable of supporting the use of septic tanks or alternative waste disposal systems. However, the proposed event center and other proposed developments would connect to the combined sewer system, and would not use septic tanks or other on-site land disposal systems for sanitary sewage. Therefore, criterion E.14(e) is not applicable to the proposed project.

Summary of Geology and Soils Impacts in Mission Bay FSEIR

The geology and soils significance criteria were addressed in the Mission Bay FSEIR in the Seismicity section and the Initial Study Geology/Topography section. Relevant information from these sections is summarized below.

The Mission Bay FSEIR Seismicity setting section characterized existing soil and geologic conditions in the Mission Bay plan area, and discussed existing seismic and geologic hazards. The Mission Bay FSEIR indicated the Mission Bay plan area is underlain by artificial fill, silty clay (Bay Mud), sandy alluvium, and stiff marine Old Bay Clay that overly the Franciscan bedrock located at depth of 30 to 130 feet below sea level. The Mission Bay FSEIR noted the Mission Bay plan area is not located within an Alquist-Priolo Fault Zone, but is within a Seismic Hazards Zone for liquefaction as defined in the City’s Community Safety Element.

The Mission Bay FSEIR Seismicity impacts section indicates the Mission Bay plan area is susceptible to earthquake-related groundshaking that would be strong enough to damage buildings and infrastructure, and could cause associated ground failure, such as liquefaction, all of which pose risks of injury or loss of life to people in or near the affected structure. The Mission Bay FSEIR noted that the San Francisco Building Code would require seismically-resistant construction in the Mission Bay plan area to reduce risks to people and structures during earthquakes. The Building Code requires that all new development in the Mission Bay plan area be preceded by special site-specific investigations to determine the type and

degree of hazards present, and include site-specific modeling to accurately estimate seismic forces that could act on a structure. In accordance with the Building Code, the resultant measures must be incorporated into the plans and specifications for a building to ensure an appropriate engineering design that would ameliorate the identified seismic hazards. To address the potential for liquefaction-related damage, the Mission Bay FSEIR noted that the major structures within the Mission Bay plan area would be constructed on foundations supported by piles driven into competent geologic materials such as dense sands, stiff clays, or bedrock. The Mission Bay FSEIR concluded that compliance with the Building Code and construction of pile-supported structures would reduce seismic hazards to an acceptable level.

The Mission Bay FSEIR Seismicity impacts section also notes that concrete piles are commonly used to penetrate the artificial fill and Bay Mud and that a sulfate-resistant mix of cement would be used to protect the concrete and reinforcing steel from the corrosive effects of the fill and young Bay Mud. To ensure compliance with this, the FSEIR includes Mitigation Measure H.7 requiring testing of the soil for sulfate and chloride content.

The Mission Bay FSEIR Initial Study Geology/Topography section reported that there are no known unique geologic features in the Mission Bay plan area. The FSEIR Initial Study estimated that up to 300,000 cubic yards of fill would be added to the Mission Bay plan area over the course of construction; this included the proposed addition of between 1 and 1.5 feet of new fill in low spots east of Third Street. The Mission Bay FSEIR Initial Study determined that this additional fill would cause no substantial change in the largely flat character of the site's topography. Given these factors, the Mission Bay FSEIR concluded the Mission Bay plan's effect on changes in topography and unique geologic features would be less than significant.

The Mission Bay FSEIR Initial Study Geology/Topography section concluded that the potential for settlement when a new structure is constructed is high because of the irregular nature of the artificial fill used to create the underlying land and the compressibility of the underlying Bay Mud. The Mission Bay FSEIR reported the alluvium, Old Bay Clay, and Franciscan Bedrock underlying these units are more competent and suitable for foundation support. The Initial Study concluded that utilizing foundations with piles supported in these materials would ameliorate the effects of settlement once the structure is constructed.

Impact Evaluation

Earthquake and Landslide Hazards

Impact GE-1: The proposed project would not expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, seismic groundshaking, seismically-induced ground failure, or landslides. (Less than Significant)

The preliminary geotechnical evaluation for the project⁵³ identified similar geologic materials to those identified in the Mission Bay FSEIR, including artificial fill, young Bay Mud, dense sands of the Colma Formation, and Old Bay Clay that overly the Franciscan Bedrock encountered at a depth of 32 to 130 feet beneath the project site. As analyzed in the Mission Bay FSEIR, no active faults cross the project site so the

⁵³ Langan Treadwell Rollo, *Preliminary Geotechnical Evaluation, Block 29-32 Mission Bay, San Francisco, California*. March 28, 2014.

potential for fault rupture is low. The structures proposed under the project would be subject to strong groundshaking in the event of an earthquake on one of the regional faults, and the site is also located in a liquefaction potential zone identified by the California Department of Conservation under the Seismic Hazards Mapping Act of 1990. However, as determined in the Mission Bay FSEIR, these impacts would be less than significant with implementation of a site-specific geotechnical investigation and seismic analysis, and incorporation of the recommendations in these studies into the building design as required by the California and San Francisco Building Codes. The proposed structures would be supported on piles driven into competent materials beneath the artificial fill and young Bay Mud.

Potential hazards associated with lateral spreading and seismically-induced settlement in the event of a major earthquake were not specifically addressed in the Mission Bay FSEIR. However, for the proposed project, these effects would also be addressed through implementation of site-specific geotechnical studies and adherence to the California and San Francisco Building Codes. On the basis of the preliminary geotechnical evaluation for the project,⁵⁴ recommended measures for addressing these effects include improving the soil to resist liquefaction and lateral spreading as well as use of flexible utility connections, utility hangers, and hinged slabs to address differential settlement. The Mission Bay FSEIR also did not discuss the potential for earthquake-induced landslides. However, the project site is relatively flat and is not located in a landslide-potential zone identified by the California Department of Conservation under the Seismic Hazards Mapping Act of 1990.⁵⁵ Therefore, there is no project impact related to earthquake-induced landslides.

As indicated by the project-specific geotechnical evaluation, no substantial changes have occurred nor has new information become available that would result in new or more severe project impacts related to seismic hazards including fault rupture, seismic groundshaking, seismically induced ground failures, or landslides. No new or different mitigation measures or alternatives would be required to reduce this impact to a less-than-significant level.

Erosion or Loss of Top Soil

Impact GE-2: The project would not result in substantial erosion or loss of top soil. (Topic Partially Analyzed Previously; Less than Significant)

The Mission Bay FSEIR addressed erosion impacts relevant to the project site but not impacts related to loss of top soil. However, both impacts would be less than significant, as described below.

Erosion

Soil movement for foundation excavation could create the potential for wind- and water-borne soil erosion during construction site. However, the project site is relatively flat; therefore, substantial erosion and loss of soil would not be expected to occur during site preparation and construction.

⁵⁴ Langan Treadwell Rollo, *Preliminary Geotechnical Evaluation, Block 29-32 Mission Bay, San Francisco, California*. March 28, 2014.

⁵⁵ California Department of Conservation, Division of Mines and Geology. *State of California Seismic Hazard Zones, City and County of San Francisco, Official Map*, November 17, 2000.

The Mission Bay FSEIR addressed erosion impacts in the Hydrology and Water Quality section under construction activity pollutants. As discussed below in Section E.15, Hydrology and Water Quality, of this Initial Study (Impact HY-1), project construction would be required to comply with the General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities, Order No. 2009-0009-DWQ (Construction General Stormwater Permit). This permit, adopted by the State Water Resources Control Board in 2009 subsequent to publication of the FSEIR, requires implementation of erosion and sedimentation controls for construction activities associated with ground disturbance. Once the project is constructed, the entire project site would be covered with structures, paved areas, or landscaping and the potential for erosion would be low. Therefore, impacts related to soil erosion during and after construction would be less than significant.

The project would not result in new or more severe significant impacts than those identified in the Mission Bay FSEIR. No new or different mitigation would be required.

Loss of Top Soil

Top soil is a fertile soil horizon that typically contains a seed base. The Mission Bay FSEIR did not specifically address loss of top soil. However, the project site was previously built out with commercial and industrial uses which have since been removed, and the site has been subject to subsequent grading, some excavation, and construction of paved surface parking lots, fencing and associated utilities. Prior development and other ground disturbance would have involved removal of any top soil on the project site. Therefore, the proposed project would have no impact related to loss of top soil.

Settlement

Impact GE-3: The project would not be located on a geologic unit or soil that is unstable, or that could become unstable as a result of the project. (Topic Partially Analyzed Previously; Less than Significant)

The Mission Bay FSEIR addressed settlement issues related to differential settlement of the underlying geologic materials that are relevant to the project site, but it did not address impacts related to settlement associated with excavation or dewatering. However, these impacts would all be less than significant, as described below.

Differential Settlement

Similar to the analysis in the Mission Bay FSEIR Initial Study Geology/Topography section, the proposed project could result in settlement once the project is constructed due to differential settlement of the artificial fill and compressibility of the Bay Mud. However, as part of the project and similar to the discussion in the Mission Bay FSEIR, the proposed event center and other proposed buildings and structures would be constructed with a foundation using piles supported in dense sands of the Colma Formation or in bedrock of the Franciscan Complex. The project would be designed in accordance with the recommendations of the site-specific geotechnical investigation that would be required under the California and San Francisco Building Codes. Furthermore, no substantial changes have occurred at the project site or new information become available that would result in new or more severe impacts related to settlement. On the basis of the factors discussed above, the project would not have any new or substantially more severe effects than those

identified in the Mission Bay FSEIR related to settlement, and no new mitigation measures or alternatives are required to reduce this impact to a less-than-significant level.

Settlement due to Excavation or Dewatering

Construction of the proposed project could also induce ground settlement as a result of excavation for construction of subsurface parking, construction dewatering, and heave during installation of piles. As discussed in the Project Description, following completion of construction, permanent, long-term dewatering would not be required. The Mission Bay FSEIR did not specifically address settlement as a result of these activities. Therefore, these potential settlement effects are described below, followed by San Francisco Department of Building Inspection (DBI) established procedures which would ensure that unstable conditions do not result from project construction.

Excavation. Construction of proposed subsurface facilities, including but not limited to, below-grade event center features and underground parking, could require excavation to a depths of up to 30 feet below San Francisco datum, and isolated deeper excavation could be required at the building cores. During excavation, artificial fill and Bay Mud would be removed and the surrounding soils could become unstable, potentially causing settlement of adjacent structures, including buildings, sidewalks, streets, and utilities. However, the project would be required to comply with the California and San Francisco Building Codes' specifications for shoring, such as conventional soldier pile and lagging, a deep soil mixed cutoff wall,⁵⁶ or rigid and water-tight internally braced secant walling.⁵⁷ Implementation of these required measures would prevent this soil from becoming unstable.

Further, the DBI would require a monitoring program utilizing an inclinometer to monitor for movement at the face of the excavation. The monitoring program would include a baseline survey and frequent surveying of the excavation as construction progresses to evaluate the effects of construction and ensure that the soil does not become unstable. DBI would review the final building plans and determine if an excavation monitoring plan would be required.

Construction Dewatering. Groundwater at the project site is relatively shallow (encountered at a depth of about 6½ to 7 feet below ground surface). Therefore, the proposed 30-foot excavation depth would extend up to approximately 23 feet beneath the groundwater table, and there is the potential for substantial water inflow into the excavation during construction, which would require dewatering to maintain dry construction conditions. Dewatering could potentially result in settlement of adjacent structures, including buildings, sidewalks, streets, and utilities. Although a water tight shoring system such as a deep soil mixed cutoff wall or secant walling could be used during excavation for structures, dewatering of excavations for installation of utilities and compaction of soil could be required. To address the potential for settlement as a result of excavation dewatering, DBI could require a site-specific dewatering plan to identify necessary

⁵⁶ A deep mixed soil cutoff wall is constructed by advancing augers or a cutting tool and pumping cement through the tips of the auger or cutting tool during drilling. The cement is mixed with the soil in place, forming a solidified column or panel of soil and cement that provides stability to the excavation sidewall and restricts groundwater inflow to the excavation.

⁵⁷ A secant wall, in simplified form, is built by drilling a series of holes and filling them with concrete, resulting in a continuous series of concrete cylinders that form a water-tight barrier that retains soil behind it.

measures to minimize the risk of settlement. DBI would review the final building plans and determine if a dewatering plan would be required.

Discharge of any groundwater removed during construction dewatering would also be subject to requirements of the City's Sewer Use Ordinance (Article 4.1 of the Public Works Code; added by Ordinance No. 19-92, amended by Ordinance No. 116-97), as supplemented by Department of Public Works Order No. 158170, requiring a permit from the Wastewater Enterprise Collection System Division of the SFPUC. A permit may be issued only if an effective pretreatment system is maintained and operated. The permit for discharge would specify water quality standards and may require the project sponsor to install and maintain meters to measure the volume of the discharge to the combined sewer system.

In addition, if the subsequent project-specific geotechnical investigation determines that dewatering wells would likely be needed to draw the groundwater down below the planned depths of excavation, any dewatering wells would be subject to the requirements of the City's Soil Boring and Well Regulation Ordinance (Article 12B of the Health Code; added by Ordinance No. 113-05), requiring a project sponsor to obtain a permit from the Department of Public Health prior to constructing a dewatering well. A permit may be issued only if the project sponsors use construction practices that would prevent the contamination or pollution of groundwater during the construction or modification of the well or soil boring.

Heave as a Result of Pile Driving. The proposed event center and other proposed buildings and structures would be supported by foundations using piles. The piles may be drilled or driven into place, and the appropriate installation method would be determined on the basis of the site-specific geotechnical investigation implemented in accordance with the California and San Francisco Building Codes. In addition, noise and vibration concerns could limit the use of driven piles.

If driven piles are used, pile driving during project construction may cause the ground to heave up to several inches, and the heave could adversely affect adjacent structures. To address this, the DBI may require a preconstruction survey and monitoring during pile driving. DBI would review the final building plans and determine if a preconstruction survey and subsequent monitoring would be required to address the potential for heave.

DBI Requirements. DBI would require a site-specific geotechnical report for the project prior to issuing a building permit, and would review the report to ensure that the potential settlement effects of excavation, pile driving, and dewatering are appropriately addressed in accordance with Section 1704.15 of the San Francisco Building Code. DBI would also require that the report include a determination as to whether a lateral movement and settlement survey should be done to monitor any movement or settlement of surrounding buildings and adjacent streets during construction. If a monitoring survey were recommended, DBI would require that a Special Inspector be retained by the project sponsor to perform this monitoring. Groundwater observation wells could be required to monitor potential settlement and subsidence during dewatering.

If, in the judgment of the Special Inspector, unacceptable movement were to occur during construction, corrective actions would be used to halt this settlement. Groundwater recharge could be used to halt settlement due to dewatering. Further, DBI would review the final building plans and determine if additional site-specific reports would be required.

With implementation of the recommendations provided in project-specific detailed geotechnical study, subject to review and approval by DBI, and monitoring by a DBI Special Inspector (if required), impacts related to the potential for settlement and subsidence due to construction on soil that is unstable, or could become unstable as a result of such construction, would be less than significant.

Problematic Soils

Impact GE-4: The project would not create substantial risks to life or property as a result of location on expansive soils or other problematic soils. (Topic Partially Analyzed Previously; Less than Significant)

The Mission Bay FSEIR addressed issues related to corrosive soils, but it did not address impacts related to expansive soils. However, these impacts would all be less than significant, as described below.

Corrosive Soils

The event center and other proposed buildings and structures would be constructed with foundations supported on concrete piles driven into competent geologic materials beneath the artificial fill and young Bay Mud. As discussed above, the Mission Bay FSEIR stated that a sulfate-resistant mix of cement would be used to protect the concrete and reinforcing steel from the corrosive effects of the fill and young Bay Mud. To ensure compliance with this, the Mission Bay FSEIR includes Mitigation Measure H.7 requiring testing of the soil for sulfate and chloride content.

However, the site-specific geotechnical investigation conducted in accordance with the California and San Francisco Building Codes would address the potential for corrosion of the concrete piles where they are in contact with the artificial fill and young Bay Mud, and would include specifications for the concrete to ensure that the piles would not be adversely affected by corrosion.

Therefore, this impact is adequately addressed by the existing building code and implementation of Mitigation Measure H.7 of the Mission Bay FSEIR is no longer necessary to reduce impacts related to corrosive soil to a less-than-significant level.

Expansive Soils

Expansive soils are typically very fine grained with a high to very high percentage of clay. They are characterized by their ability to undergo significant volume change (i.e., to shrink and swell) due to variations in soil moisture content which typically result from factors such as rainfall, landscape irrigation, utility leakage, and roof drainage. The Mission Bay FSEIR did not specifically address the effects of expansive soil on newly constructed structures. However, the presence of expansive soils is not an issue at the project site because the artificial fill beneath the site is sandy and would not be expansive, and because the young Bay Mud beneath the site is generally below the groundwater table, and thus is permanently saturated. Further, any backfill materials used for the project would have a low expansion potential in accordance with the recommendations of the geotechnical report for the project, completed in accordance with the California and San Francisco Building Codes. Therefore, impacts related to expansive soils would be less than significant.

Topography or Unique Geologic Features

Impact GE-5: The project would not substantially change the topography or any unique geologic or physical feature of the project site. (Less than Significant)

The Mission Bay FSEIR Initial Study reported that there are no unique geologic features in the Mission Bay plan area and that the addition of limited amounts of new fill in low spots east of Third Street would not result in a substantial change in topography. Similarly, the project site is generally flat and there are no unique topographic, geologic, or physical features within the site. Construction of the proposed project would not involve the placement of fill and would not alter the topography of the site. No changes have occurred at the project site or new information has become available that would affect this impact. Therefore, the project would not result in any new impacts or increase the severity of previously identified impacts related to alteration of topography or damage to unique geologic features and this impact would be less than significant.

Cumulative Impacts

Impact C-GE-1: The project, in combination with other past, present, and reasonably foreseeable future projects, would not result in a considerable contribution to cumulative impacts related to geologic hazards. (Less than Significant)

Geologic impacts are usually restricted to the immediate vicinity, and potential geologic impacts resulting from the proposed project that could contribute to a cumulative impact are limited to seismic effects and the potential for creation of an unstable geologic unit. Seismic effects could occur in the project vicinity, including the south of Market area. Therefore, this area is considered the geographic scope for seismic effects. The creation of unstable geologic units is a local effect; therefore, the geographic scope for this cumulative impact is the project area and immediate vicinity. This analysis is based on past, present, and reasonably foreseeable future projects in this area, including those listed above in Section D, Approach to Analysis.

Seismic Safety. Several cumulative projects would contribute to an increase in the number of persons potentially exposed to seismic risks in the south of Market area, which could result in a potential cumulative impact. However, as noted in Impact GE-1, the project site is not subject to fault rupture because there are no known earthquake faults that cross the site or vicinity. The proposed project and any development within the Mission Bay area would be subject to very strong groundshaking and could experience liquefaction effects in the event of an earthquake on a nearby fault. However, the project and any new buildings would be constructed in accordance with the most current building code requirements for seismic safety, providing for increased life-safety protection of residents and workers. These requirements would reduce potential cumulative impacts to a less-than-significant level, and the proposed project's compliance with these requirements would ensure that it would not make a cumulatively considerable contribution to cumulative impacts related to seismic safety.

Unstable Geologic Unit. As discussed in Impact GE-3, implementation of the proposed project could result in ground settlement from excavation for construction of the below-ground parking, construction dewatering, and pile driving. Any nearby project that could contribute to cumulative impacts related to an unstable geologic unit in the immediate vicinity would be required to implement the DBI procedures

described above, including preparation of a detailed geotechnical report and site-specific reports as needed to address the potential settlement and subsidence impacts of excavation and dewatering; implementation of a lateral movement and settlement survey to monitor any movement or settlement of surrounding buildings and adjacent streets during construction and monitoring by a Special Inspector, if needed; conducting a pre-construction survey and monitoring during pile driving; and implementation of corrective actions, as necessary. With implementation of these requirements under the proposed project and under any nearby projects, cumulative impacts related to ground settlement would be less than significant.

15. HYDROLOGY AND WATER QUALITY— Would the project:				
a) Violate any water quality standards or waste discharge requirements?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner that would result in substantial erosion of siltation on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f) Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other authoritative flood hazard delineation map?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h) Place within a 100-year flood hazard area structures that would impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
j) Expose people or structures to a significant risk of loss, injury or death involving inundation by seiche, tsunami, or mudflow?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Mission Bay FSEIR did not specifically address potential impacts of the Mission Bay plan related to placing housing within a 100-year flood hazard area. However, the project would not include any housing or residential uses. Therefore, criterion E.15(g) does not apply to the proposed project. In addition, the project site is not located in the vicinity of a levee or dam, so criterion E.15(i) with respect to failure of a levee or dam is not applicable to this project. Similarly, the project site is not located on or near slopes that could be subject to mudflow, so criterion E.15(j) with respect to mudflow is not applicable to this project. Thus, these topics are not discussed further in this Initial Study or in the SEIR.

Summary of Hydrology and Water Quality Impacts in Mission Bay FSEIR

The Mission Bay FSEIR addressed potential effect on hydrology and water quality in the Hydrology and Water Quality, Community Services and Utilities, Initial Study Water, and Seismicity sections. Relevant information from these sections is summarized below.

The Mission Bay FSEIR Hydrology and Water Quality setting section characterized existing drainage patterns and municipal sewer treatment facilities serving the Mission Bay plan area at that time. The Mission Bay FSEIR reported that the Mission Bay plan area was located in the City's Bayside drainage basin, in which combined stormwater and sanitary sewage was collected, then conveyed to and treated at the Southeast Water Pollution Control Plant (SEWPCP) near Islais Creek. At that time, the Mission Bay plan area was located in four sub-basins, with the project site draining to two of the sub-basins. The north and east portions of the Blocks 29-32 site were located in the Bay sub-basin which drained directly to the Bay, and the balance of Blocks 29-32 site was located within the Mariposa sub-basin portion of the Bayside drainage basin. Stormwater collected in the Mariposa sub-basin was directed to the Mariposa pump station, and from there, to the SEWPCP. Stormwater occurring within the Bay sub-basin at that time drained directly to the Bay, and not the combined sewer system.

As reported in the Mission Bay FSEIR, the annual average dry weather flows at the SEWPCP at that time were estimated at 67 mgd. During wet weather, the SEWPCP could treat up to 150 mgd to a secondary level, and an additional 100 mgd to a primary level.⁵⁸ In addition, up to an additional 150 mgd of wet weather flows received primary treatment at the North Point Water Pollution Control Plant, increasing total wet weather treatment capacity for the Bayside drainage basin to 400 mgd. As also reported in the Mission Bay FSEIR, if rainfall exceeded the total capacity of the SEWPCP, the North Point facility, and storage/transport facilities, then excess flows are directed to sewer discharge structures located along the City's bayside. These flows receive flow-through treatment (similar to primary treatment) and are discharged to the Bay under the City's National Pollutant Discharge Elimination System (NPDES) permit issued by the Regional Water Quality Control Board (RWQCB).

Mission Bay Plan Area Drainage Plan

The Mission Bay FSEIR Hydrology and Water Quality impacts section described the proposed Mission Bay plan's drainage plan, which proposed a new separate storm sewer system for a portion of the Mission Bay plan area. Under the Mission Bay plan, stormwater within the Bay sub-basin (which

⁵⁸ Secondary treatment is the treatment of wastewater or sewage involving removal of organic matter using biological and chemical processes. This is a higher level of treatment than primary treatment, which is removal of floating and settleable solids using physical operations such as screening and sedimentation.

included the eastern portion of Blocks 29-32 under 1998 conditions) would drain into new infrastructure and no longer directly to the Bay. The Mission Bay plan proposed a reconfigured Central/Bay sub-basin (that would include the northern portion of the Blocks 29-32 site) that would be served by separate sewer and storm drain systems. The sanitary-only sewers from the Central/Bay sub-basin would connect to the existing combined sewer system for treatment at the SEWCP. The separate storm drainage system proposed within the Central/Bay sub-basin would divert an initial portion of the stormwater flow (approximately 80 percent of the average annual flow) to the City's combined system for treatment. Stormwater volumes greater than the initial flows and up to a 5-year storm would be discharged directly to four new stormwater outfalls (two to China Basin Channel and two to the Bay). Volumes greater than a 5-year event would pond or flow overland to the Bay. The Mission Bay plan also proposed a reconfigured Mariposa sub-basin (that would include the southern portion Blocks 29-32), and would be served by the City's existing combined sewer system.

Project Operational Effects on Water Quality

The Mission Bay FSEIR indicated that the Mission Bay plan would contribute pollutants to the Bay through 1) the discharge to municipal wastewater effluent from the SEWPCP, 2) the discharge of treated combined sewer overflows (CSOs) (these events are now referred to as combined sewer discharges or CSDs), and 3) the discharge of untreated stormwater, as described below.

Mission Bay Plan Effects of Volume and Quality of Municipal Wastewater Effluent

The Mission Bay FSEIR estimated that the Mission Bay plan would generate municipal wastewater and increase the total effluent from the SEWPCP by about 3 percent, and result in an approximate 3 percent increase in the pollutant loading to the Bay from municipal wastewater effluent. The Mission Bay FSEIR reported that the quality of municipal wastewater from the Mission Bay plan area would not differ substantially from the quality of other City wastewater flowing to the SEWPCP, and would not materially change the concentrations of pollutants in the effluent. The Mission Bay FSEIR determined that the effluent increases would be well within the City's treatment plant capacity, and would not cause a violation of the City's National Pollutant Discharge Elimination System (NPDES) permit requirements regarding its discharge from the SEWPCP. The Mission Bay FSEIR also determined that the plan pollutant concentrations were within water quality screening values, including Water Quality Objectives adopted by the RWQCB. Given these factors, the Mission Bay FSEIR concluded that Mission Bay plan effects of municipal wastewater effluent on water quality would be less than significant.

Mission Bay Plan Effects of Volume and Quality of Combined Sewer Discharges

The Mission Bay FSEIR estimated that the Mission Bay plan would increase the average annual volume of CSDs (formerly referred to as combined sewer overflows, or CSOs) by approximately 0.2 percent, and increase the duration of each overflow event by a few minutes. The Mission Bay FSEIR reported that the Mission Bay plan would not change the concentrations of pollutants in the treated CSDs. In addition, this slight increase in CSD volumes and duration would not cause a violation of the City's NPDES permit requirements for the CSDs, and thus, would not adversely affect existing near-shore aquatic biota or water-contact recreation in the Bay. Given these factors, the Mission Bay FSEIR concluded that Mission Bay plan effects of CSDs on water quality would be less than significant.

Mission Bay Plan Effects of Volume and Quality of Direct Stormwater Discharge

The Mission Bay FSEIR reported that the Mission Bay plan would increase the volume of stormwater directly discharged to the Bay by approximately 2 percent and would also change the concentration of pollutants in the stormwater discharge due to the intensification of land uses proposed in the Mission Bay plan area. However, the FSEIR concluded that any potential increase in pollutants would be very small relative to those associated with municipal wastewater and treated CSDs. The Mission Bay FSEIR determined that this increase in volumes and change in pollutant concentrations would not adversely affect existing aquatic biota in the Bay. Given these factors, the Mission Bay FSEIR concluded that Mission Bay plan effects of direct stormwater discharge on water quality would be less than significant.

Mission Bay Plan Effects of Sediment Quality

The Mission Bay FSEIR reported that the RWQCB identified China Basin Channel and Islais Creek as candidate toxic hot spots for sediment quality. The Mission Bay FSEIR indicated the Mission Bay plan would slightly decrease volumes of CSDs to China Basin Channel, however would increase flows elsewhere, most notably to Islais Creek. The Mission Bay FSEIR indicated that increased volumes of CSDs to Islais Creek with the Mission Bay plan would cause a corresponding increase in sediment deposition at that location. The Mission Bay FSEIR determined that the plan would not, however, measurably change the physical or chemical composition of the sediment layer, nor affect any determination by the RWQCB to designate China Basin Channel or Islais Creek as toxic hot spots. Given these factors, the Mission Bay FSEIR concluded that Mission Bay plan effects on sediment quality in Islais Creek and China Basin Channel would be less than significant.

Mission Bay Plan Contribution to Cumulative Effects

The FSEIR reported that there were no significant cumulative impacts identified from the estimated increased volume and pollutant load of treated municipal wastewater effluent, treated CSDs, and direct stormwater discharges, because there would not be substantial degradation in water quality of the Bay or near-shore waters, no toxic effect on aquatic biota, and no substantial change sediment quality or beneficial uses.

However, the FSEIR determined that due to the lack of conclusive evidence refuting a causal relationship between treated CSDs, stormwater discharges, and sediment quality, the Mission Bay plan could contribute to a potentially significant cumulative impact on near-shore waters of the Bay from multiple sources of CSDs and direct stormwater discharges to China Basin Channel. The FSEIR concluded that the estimated plan contribution (0.2 percent) to the potential cumulative increase (11 percent) in Bayside CSD volumes, and the contribution of plan-related stormwater discharges to possible cumulative impacts would be reduced to less than significant with the implementation of Mitigation Measures K.3 and K.4 regarding CSD volumes and alternative treatment technologies.

Mission Bay Phased Development Effects on Water Quality from Stormwater

The Mission Bay FSEIR discussed U.S. EPA Phase II stormwater regulations that had been proposed but not finalized at the time of preparation of the FSEIR. These proposed regulations would require the City to develop and implement a stormwater management program to reduce the discharge of pollutants to the maximum extent practicable and protect water quality. The Mission Bay FSEIR indicated that the lack

of adopted regulatory requirements for a stormwater management program that addressed Mission Bay stormwater quality, and a failure to implement other BMPs to minimize stormwater pollution, could potentially conflict with the intent of the proposed stormwater permit requirements and result in a significant impact.

Mitigation Measure M.5 in the Mission Bay FSEIR Community Services and Utilities section (see Utilities and Services section in this Initial Study, above) required conveying all stormwater runoff from newly developed areas in the Bay Basin to the combined sewer system prior to completion of the initial-flow diversion system. Mitigation Measure K.5 in the Mission Bay FSEIR Hydrology and Water Quality section identified implementation of an individual stormwater management program that utilizes BMPs for Mission Bay until the Phase II regulations become final and Mission Bay is included in the City's stormwater management program. The FSEIR also identified Mitigation Measure K.2 in the Mission Bay FSEIR Hydrology and Water Quality section that required mandatory participation in the City's existing Water Pollution Prevention Program.

Mission Bay Plan Construction Effects on Water Quality

The Mission Bay FSEIR Hydrology and Water Quality section reported that construction activities would cause ground disturbance that would result in the potential for erosion, and potential for construction sedimentation and other pollutants in China Basin Channel and the Bay. The Mission Bay FSEIR indicated that construction activities proposed under the plan would be required to comply with the NPDES General Construction Activity Storm Water Permit, as administered by the RWQCB, which requires preparation and implementation of a Storm Water Pollution and Prevention Plan (SWPPP). The Mission Bay FSEIR also identified a number of best management practices (BMPs) that should be incorporated into the SWPPP as part of the plan, and included implementation of these BMPs as Mitigation Measures K.1a through K.1i. Regarding discharges of groundwater produced during construction-related dewatering, the FSEIR concluded that water quality effects related to these discharges would not be significant because the discharge would need to comply with the requirements of the City's Industrial Waste Ordinance, adopted in 1992. Based on these factors, the Mission Bay FSEIR concluded that construction-related impacts to water quality would be less than significant.

Mission Bay Plan Effects on Flooding

The Mission Bay FSEIR Initial Study Water section summarized relevant information from the 1990 Mission Bay FEIR regarding the issue of potential flooding. The 1990 Mission Bay FEIR indicated the existing elevation of the Mission Bay plan area ranged from approximately +6.0 to -2.0 feet San Francisco City Datum (SFD).⁵⁹ Groundwater in the Mission Bay plan area was reported at 3.5 to 9 feet below ground surface, and contiguous with the mean sea level in the adjacent Bay. As referenced in the Mission Bay FSEIR Initial Study, the 1990 Mission Bay FEIR determined that proposed structures or roadways in Mission Bay placed at elevations at or below -2.0 feet SFD, after settling on the site, could be subject to tidal flooding during a 100-year flood event, and that if sea level were to rise, groundwater levels in Mission Bay could rise similarly.

⁵⁹ San Francisco City Datum (SFD) establishes the City's zero point for surveying purposes at approximately 8.6 feet above the mean sea level established by 1929 U.S. Geological Survey datum, and approximately 11.3 feet above the current 1988 North American Vertical Datum.

The Mission Bay FSEIR Initial Study included Mitigation Measures K.6a through K.6f, adapted from the 1990 Mission Bay FEIR that required structures in the Mission Bay area to be designed and located in a way to protect low-lying shoreline areas from the dangers of tidal flooding, including consideration of a rise in relative sea level. The mitigation specified that to address effects of sea level rise, specific flood protection and engineering and building analyses must be conducted by a licensed engineer where structures are proposed below an elevation of -1.0 foot SFD. Potential measures identified by the mitigation included setback from the water's edge, installation of seawalls, dikes and/or berms during construction of infrastructure; reducing the amount of excavation for utilities or basements; and use of fill to raise the grade of public open spaces. With implementation of these mitigation measures, the Mission Bay FSEIR determined that plan effects related to flooding and sea level rise would be less than significant.

Mission Bay Plan Effects on Groundwater Depletion and Recharge

The Mission Bay FSEIR Initial Study Water section determined that the Mission Bay plan would have a less than significant impact on depletion of groundwater resources and groundwater recharge, primarily because the plan does not propose to extract groundwater. The FSEIR Initial Study indicated that the Mission Bay plan would supply non-potable water uses by either recycled water, groundwater, or potentially a blend of imported groundwater and recycled water. However, the effects of groundwater extraction for this purpose were analyzed in a separate environmental review document for the recycled water project, which determined that the recycled water project would not adversely affect groundwater resources or groundwater recharge.

The Mission Bay FSEIR Initial Study also determined that groundwater dewatering during construction would be subject to approval either by the City for discharge to the sewer system or at an off-site disposal facility. Therefore, impacts on groundwater depletion and recharge were determined to be less than significant.

Mission Bay Plan Effects Related to Tsunami and Seiche

The Mission Bay FSEIR Seismicity impact section estimated that based on evaluations conducted by the U.S. Army Corps of Engineers, the plan area would be subject to as much as 4.7 feet of wave run-up during the 100-year tsunami event, and 7.8 feet of wave run-up during the 500-year tsunami event. Based on this, the maximum flooding level would be -1 feet SFD for the 100-year event and 2 feet SFD for the 500-year event. The FSEIR stated that the U.S. Army Corps of Engineers model estimated the height of "worst case" flooding during extreme high tide crest conditions, which occur about 30 times each year, and last for less than 2 hours each time and the likelihood of a 100-year tsunami occurring within that window is less than one hundredth of one percent. Thus, even during these rare events, only the lowest portions of the plan area would be inundated as a result of a tsunami. Given the fact that the likelihood of such events is less than one hundredth of one percent, the FSEIR determined that impacts would be less than significant.

Impact Evaluation

Water Quality

Impact HY-1: The project would not violate water quality standards or otherwise substantially degrade water quality with respect to construction activities, including construction dewatering. (Less than Significant)

The project would not result in water quality impacts as a result of construction-related stormwater discharges, including construction-related dewatering because these discharges would be required to be managed in accordance with existing San Francisco regulations, described below.

Water Quality Effects of Construction Activities

During construction, stormwater from the project site would drain to a separate storm drainage system that includes existing storm drain lines located along South Street, Third Street, and 16th Street (which have been built subsequent to the FSEIR consistent with the Mission Bay South Infrastructure Plan). As described above for the Mission Bay FSEIR, stormwater discharges during construction would require NPDES coverage under the General Construction Activity Storm Water Permit, as administered by the RWQCB. At the time the FSEIR was prepared, this general permit required preparation and implementation of a Storm Water Pollution and Prevention Plan (SWPPP), but did not include specific BMPs to be implemented to avoid water quality effects associated with construction-related stormwater discharges. To address this, the Mission Bay FSEIR also identified a number of best management practices (BMPs) that should be incorporated into the SWPPP as part of the plan, and included as Mitigation Measures K.1a through K.1i.

However, the State Water Resources Control Board subsequently adopted the General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities, Order No. 2009-0009-DWQ (Construction General Stormwater Permit) in 2009 and this permit supersedes the permit in effect at the time of FSEIR publication. Construction activities subject to this permit include ground disturbance such as clearing, grading, and excavating, as well as soil stockpiling. Under the Construction General Stormwater Permit, construction projects are characterized by the level of risk to water quality. This is determined using a combination of the sediment risk of the project and the receiving water quality risk. Projects can be characterized as Level 1, Level 2, or Level 3, and the minimum Best Management Practices (BMPs) and monitoring that must be implemented during construction are based on the risk level. The BMPs are designed to prevent pollutants from coming in contact with stormwater and to keep all products of erosion and stormwater pollutants from moving offsite into receiving waters. They are specified in a SWPPP that must be prepared by a Qualified SWPPP Developer (QSD) and submitted to the San Francisco RWQCB before construction begins.

For construction activities characterized as Level 1, the Construction General Stormwater Permit specifies minimum BMPs to be implemented that address good housekeeping practices (including those for managing hazardous materials used during construction, non-stormwater management, erosion and sediment control, and run-on and runoff control). A qualified professional must inspect the required BMPs weekly when there is no rain and daily during a qualifying rainstorm. For construction activities characterized as Level 2 and 3, the minimum requirements identified for Level 1 apply, as well as some more stringent requirements. For instance, erosion controls must be implemented in conjunction with

sediment controls in active construction areas, and linear sediment controls must be used along slopes. In addition, a QSD must prepare a rain event action plan for Level 2 and 3 construction activities. This plan would identify the designated site stormwater manager, the provider of erosion and sediment controls, and the stormwater sampling agent, as well as the trades active at the site during all construction phases. The plan would include suggested actions for each construction phase.

Compliance with the current General Construction NPDES Permit would ensure that construction-related stormwater discharges would not violate water quality standards or otherwise substantially degrade water quality. Therefore, this impact would be less than significant with implementation of regulatory requirements and FSEIR Mitigation Measures K.1a through K.1i. would be superseded by the specified regulatory requirements. No new mitigation measures are required, and the project would not result in any new significant impacts or substantially more severe impacts on water quality from construction activities than were disclosed in the Mission Bay FSEIR.

Water Quality Effects of Groundwater Dewatering

As noted in the Geology and Soils section of this Initial Study, the groundwater level at the project site is about 6½ to 7 feet below ground surface. Given that the estimated depth of excavation on the site would be up to 30 feet below San Francisco datum deep, construction-related groundwater dewatering would likely be required. However, the sponsor indicates that the project would be designed such that permanent dewatering would not be required.

As discussed above, the Mission Bay FSEIR Initial Study concluded that water quality impacts associated with discharge of groundwater during construction-related dewatering would be less than significant with implementation of the City's Industrial Waste Ordinance, adopted in 1992. This ordinance is found in Article 4.1 of the *Public Works Code*, as supplemented by Order No. 158170, which regulates the quantity and quality of discharges to the combined sewer system. In accordance with Article 4.1 and Order No. 158170, the discharge permit would contain appropriate discharge standards and may require installation of meters to measure the volume of the discharge. Although the groundwater could contain contaminants related to past site activities, as discussed in, the Hazards and Hazardous Materials section of this Initial Study, as well as sediment and suspended solids, the groundwater would be treated as necessary to meet permit requirements prior to discharge.

With discharge to the combined sewer system in accordance with regulatory requirements, water quality impacts related to a violation of water quality standards or degradation of water quality due to discharge of groundwater produced during construction-related dewatering would be less than significant.

The FSEIR did not address water quality impacts associated with discharge of groundwater produced during long-term dewatering once the development projects were constructed. However, the sponsor indicates that no long-term dewatering of the project site is proposed during operation of the project. Therefore, the project would not result in any new significant impacts or substantially more severe impacts on water quality from dewatering activities than previously identified in the FSEIR.

Groundwater

Impact HY-2: The project would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level. (Less than Significant)

As discussed above, the Initial Study for the Mission Bay FSEIR stated that non-potable water supply for development projects within the plan area would use recycled water that would potentially be a blend of imported groundwater and recycled water. As stated in the Initial Study for the Mission Bay FSEIR, the effects of groundwater extraction for this purpose were analyzed in a separate environmental review document for the recycled water project which determined that the recycled water project would not adversely affect groundwater resources or groundwater recharge. However, the San Francisco Public Utilities Commission (SFPUC) has not yet constructed the planned recycled water system for the eastside of the City, and currently, does not intend to blend groundwater with recycled water. Although the project would be required to install dual plumbing for use of recycled water in accordance with the Recycled Water Ordinance found in Article 22 of the San Francisco Public Works Code, the project would not use recycled water until it becomes available.

Further, implementation of the project would not result in depletion of groundwater resources because, other than potential pumping of groundwater during construction dewatering, the project would not involve the use or extraction of groundwater. Rather, potable water for the project would be provided by the SFPUC regional water system. If and when a supply of recycled water becomes available through the Eastside Recycled Water Project,⁶⁰ the project would also use recycled water for non-potable uses. Although groundwater dewatering could be required during construction of the project, this dewatering would not deplete groundwater resources because the Downtown San Francisco Groundwater Basin is not used as a drinking water supply and there are no plans for development of this basin for groundwater production.

Project implementation would not interfere with groundwater recharge because although the project would replace the great majority of the currently unpaved portions of the site with impervious surfaces, the new impervious surfaces comprise a negligible portion of the total area of the Downtown Groundwater basin. Impacts related to depletion of groundwater resources and interference with groundwater recharge would be less than significant because the project would not include groundwater pumping other than for dewatering, the Downtown San Francisco Groundwater Basin is not used as a potable water supply, there are no plans for development of the basin for groundwater production, and there would be only a minor increase in impervious surfaces. Therefore, the project's impacts on groundwater supplies and recharge would be less than significant, and the project would not result in any new significant impacts or substantially more severe impacts from those previously identified in the FSEIR.

⁶⁰ The SFPUC plans to provide 2 million gallons per day of high quality recycled water to the customers in the east side of the City through the Eastside Recycled Water Project for non-potable uses such as irrigation and toilet flushing. This project is still in the planning stages, and the implementation date is uncertain.

Drainage Patterns

Impact HY-3: The project would not alter the existing drainage pattern of the area in a manner that would result in substantial erosion, siltation, or flooding on- or off-site, and the project would not substantially increase the rate or amount of surface runoff that would result in flooding on- or off-site. (Less than Significant)

The project site does not include any existing streams or water courses that could be altered or diverted. Therefore, the project would have no impact related to alteration of drainage patterns by altering the course of a stream in a manner that would cause erosion or flooding on or off-site.

At the time of preparation of the Mission Bay FSEIR, drainage at the project site was directed either to the combined sewer system in the Central sub-basin or Mariposa sub-basin or directly to the Bay. Since that time, a separate storm drainage system has been constructed along South Street, Third Street, and 16th Street, as part of implementation of the Mission Bay South Infrastructure Plan, so that portions of the site previously draining directly to the Bay now drain to a separate storm drain system. The remainder of the site continues to drain to the combined sewer system.

Under the proposed project, the stormwater would be routed to a separate storm sewer system. Construction of the on-site project components would be required to comply with applicable stormwater design guidelines, which would ensure that no substantial erosion or siltation on-or off-site would occur.

Currently, the project site is comprised of open ground and paved areas. Once constructed, the project would change the quantity of stormwater runoff from the site. However, in accordance with the Stormwater Design Guidelines, stormwater controls would be designed to treat 90 percent of the annual stormwater runoff to the separate storm sewer system. Compliance with these design guidelines would ensure that no on- or off-site flooding would occur.

Therefore, neither alteration of existing drainage patterns at the project site nor changes in stormwater runoff volumes would result in substantial erosion, siltation, or flooding on- or off-site, and this impact would be less than significant. The project would not result in any new significant impacts or substantially more severe impacts related to alteration of drainage patterns from those previously identified in the FSEIR, and no new mitigation measures would be required.

Flooding

Impact HY-4: The project would not expose people, housing, or structures, to substantial risk of loss due to existing flooding risks and would not redirect or impede flood flows. (Less than Significant)

As discussed above, the Mission Bay FSEIR concluded that structures and roadways placed at elevations at or below -2.0 feet SFD could be subject to tidal flooding during a 100-year flood event and specified mitigation measures to address flooding issues. Elevations at the project site range from approximately -1 foot SFD to +3 feet SFD,⁶¹ therefore the project site would not be subject to tidal flooding during a

⁶¹ Langan Treadwell Rollo, Preliminary Geotechnical Evaluation, Block 29-32 Mission Bay, San Francisco, California. March 28, 2014.

100-year flood event. In addition, since publication of the FSEIR, the CCSF published interim flood maps in 2008 that show 100-year flooding zones within the City and County of San Francisco and the project site is not located within an identified 100-year flood zone.⁶²

Also subsequent to publication of the FSEIR in 1998, the SFPUC has specifically identified potential flooding hazards related to the depth of sewer lines relative to properties they serve. The SFPUC identified a potential flood zone south of Market Street but the proposed project is not within this zone.⁶³ However, the proposed project site is within an area located on fill, and the SFPUC notes that subsidence in areas located on fill or Bay Mud could subside to a point where the sewers do not drain freely during a storm (and sometimes during dry weather), and the resulting sewer backups could result in localized flooding. Accordingly, the project sponsor would be referred to the SFPUC at the beginning of the building permit process to determine whether the project would result in ground level flooding during storms. If so, the applicant would be required to comply with SFPUC requirements for projects in flood-prone zones as part of the permit approval process. These measures could include providing a pump station for the sewage flow, raising the elevation of entryways, providing special sidewalk construction, and constructing deep gutters, among others.

Therefore, impacts associated with exposure of people or structures to substantial risk of loss due to existing flooding risks and impedance of flood flows would be less than significant. Because the project would result in less than significant impacts related to flooding based on current flood hazard mapping by the CCSF and would be subject to SFPUC requirements for projects in flood zones that could result from sewer backups as part of the permit approval process (if needed), the project would result in less severe flooding impacts than those analyzed in the FSEIR. Therefore, compliance with SFPUC requirements for project in flood zones would obviate the need for Mitigation Measures K.6a through K.6f to mitigate existing flooding hazards, and these measures previously identified in the Mission Bay FSEIR would not be necessary to reduce this impact to a less than significant level. As stated below, potential future flood risks due to projected sea level rise and the applicability of these mitigation measures related to flooding as a result of sea level rise will be addressed in the SEIR.

Inundation by Seiche or Tsunami

Impact HY-5: The project would not expose people or structures to a significant risk of loss, injury or death involving inundation by seiche or tsunami. (Less than Significant)

As discussed above, the FSEIR estimated that the maximum flooding level in the Mission Bay plan area would be -1 feet SFD for the 100-year tsunami event and 2 feet SFD for the 500-year tsunami event. In addition, based on the state's official tsunami inundation maps published subsequent to publication of the FSEIR, the eastern portion of the project site is within a tsunami inundation zone.⁶⁴Based on modeling

⁶² City and County of San Francisco, San Francisco Interim Floodplain Map, Northeast, Final Draft. July, 2008.

⁶³ San Francisco Planning Department, Planning Director Bulletin No. 4, Review of Project Identified in Areas Prone to Flooding.

⁶⁴ California Emergency Management Agency, California Geological Survey, University of Southern California. Tsunami Inundation Map for Emergency Planning, San Francisco North Quadrangle/San Francisco South Quadrangle (SF Bay). June 15, 2009.

provided in the Tsunami Response Annex of the CCSF Emergency Response Plan, the potential tsunami and seiche run-up at the project site would be approximately 6 feet.⁶⁵

Although extremely rare, a tsunami or seiche could damage the proposed structures. Visitors and staff of the event center and other uses could also be endangered. However, as described below, the project is set back from the Bay which would provide a buffer between the Bay shoreline and the proposed project, and the project would also raise most occupied portions of the event center and mixed use development above the inundation depth. Further, San Francisco has a well-established Tsunami Warning System that would be activated and would protect people from harm, as also discussed below.

Structures. The proposed event center and other proposed structures would be constructed to current building standards. Although some damage to the structures could occur, the improvements constructed under the proposed project would be resilient to tsunamis or seiches. Therefore, impacts related to damage to structures from inundation by seiche and tsunami are considered less than significant and would not be a new significant impact or substantially more severe than impacts identified in the Mission Bay FSEIR.

People. The proposed project would increase the number of people at Blocks 29-32, and would therefore expose more people to tsunami or seiche hazards than under existing conditions. However, the project would include design features that would raise most occupied portions of the event center and mixed use development above the inundation depth. Proposed design features would include:

- Raising certain pedestrian access and outdoor areas, including the main plaza, the main pedestrian path providing access around the event center, and the Bayfront Overlook, Bayfront Terrace, and food hall roof
- Providing certain above-grade entry/exits to proposed buildings, including the main and secondary entries to the event center, to the office and retail buildings, and the upper floors of the proposed food hall

In the event that an earthquake occurred that would be capable of producing a seiche or tsunami that could affect San Francisco, the National Warning System would also provide warning to the City. The San Francisco outdoor warning system (sirens and loudspeakers, tested each Tuesday at 12:00 noon) would then be initiated which would sound an alarm alerting the public to tune into local TV, cable TV, or radio stations, which would carry instructions for appropriate actions to be taken as part of the Emergency Alert System. Police would also canvas the neighborhoods sounding sirens and bullhorns, as well as knocking on doors as needed, to provide emergency instructions. Evacuation centers would be set up if required. The advance warning system would allow for evacuation of people prior to a seiche or tsunami and would provide a high level of protection to public safety.

⁶⁵ City and County of San Francisco, Emergency Response Plan, an Element of the CCSF Emergency Management Program, Tsunami Response Annex, March 2011, <http://www.sfdem.org/ftp/uploadedfiles/DEM/PlansReports/TsunamiAnnex-2008.pdf>, accessed on September 10, 2014.

Therefore, impacts related to exposure of people to risk from inundation by seiche and tsunami are considered less than significant. This would not be a new or more significant impact than identified in the Mission Bay FSEIR.

Cumulative Impacts

Impact C-HY-1: The project, in combination with past, present, and reasonably foreseeable future projects in the site vicinity, would not result in a considerable contribution to cumulative impacts on hydrology and water quality with respect to construction activities, dewatering, groundwater supplies, drainage pattern, flooding, seiche or tsunami. (Less than Significant)

The geographic scope of potential cumulative impacts on water quality encompasses central San Francisco Bay and the Downtown Groundwater Basin. The geographic scope of effects on drainage and flooding consists of Bayside Drainage Basin. Impacts related to inundation by tsunami could occur along the entire San Francisco Waterfront; therefore the geographical scope for this impact includes the entire waterfront. This analysis is based on past, present, and reasonably foreseeable future projects in this area, including those listed above in Section D, Approach to Analysis.

As discussed in Impacts HY-1 and HY-2, implementation of appropriate regulatory requirements would ensure that the proposed project would result in less than significant impacts related to erosion and discharges of groundwater during dewatering. Other projects that could potentially contribute to a cumulative impact would be subject to the same or similar regulatory requirements including the Construction General NPDES permit and Article 4.1 of the Public Works Code as supplemented by DPW Order No. 158170 (including implementation of an erosion control plan). Implementation of these requirements under each individual project would ensure that all discharges comply with regulatory standards and would not result in a violation of water quality standards. Therefore, cumulative impacts related to these topics would be less than significant.

As discussed in Impacts HY-3 and HY-4, project elements affecting drainage and flooding issues at the project site would be subject to compliance with established guidelines for the separate storm drainage system and/or the combined sewer system, which would reduce these impacts to less than significant. Other past, present, and reasonably foreseeable future projects within the Bayside Drainage Basin would also be subject to these regulations. Therefore, based on the City's established regulations and guidelines for the separate and combined sewer system, which are designed to serve the City as a whole, cumulative impacts would also be less than significant.

As discussed in Impact HY-5, a tsunami or seiche would not significantly damage the proposed structures and visitors and staff of the event center and other uses would not be exposed to substantial risks related to tsunami or seiche because the occupied portions of the event center and mixed use development would be constructed above the 500-year tsunami inundation elevation. San Francisco also has a well-established Tsunami Warning System that would be activated and would protect people from harm and the new structures would be constructed in accordance with the current building code which would make them resilient to damage by tsunamis. Because other projects would be built to current building codes, and the Tsunami Warning System would also protect other people in the project vicinity from harm due to tsunamis, cumulative impacts related to inundation by tsunami or seiche would be less than significant.

Issues to be Analyzed in the SEIR

The impact evaluation above explains why the proposed project would not result in new significant impacts or substantially increase the severity of impacts on hydrology and water quality with respect to criteria E.15 (b), (c), (d), (f), (g), (h), or (j), and no further analysis is required on these subjects. However, with respect to criteria E.15(a), (e) and (i), additional evaluation of the proposed project is necessary for both direct and cumulative impacts related to certain aspects of these criteria. The SEIR will include a detailed analysis of:

- The potential for changes in stormwater runoff from the site and wastewater discharged to the combined sewer to affect the frequency or duration of combined sewer discharges. This analysis will also discuss the applicability of FSEIR Mitigation Measures K.2, K.5, and M.5, which all pertain to stormwater management measures.
- The potential for changes in runoff patterns due to the proposed project and to cumulative development to affect the capacity of the combined sewer system. This analysis will also discuss the applicability of FSEIR Mitigation Measures K.3 and K.4, which pertain to cumulative impacts on the combined sewer system.
- The potential for the project to expose people or structures to a significant risk of loss or injury due to future flooding from sea level rise and the applicability of Mission Bay FSEIR Mitigation Measure K.6, which pertains to flooding.

Topics:	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
16. HAZARDS AND HAZARDOUS MATERIALS— Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Topics:	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h) Expose people or structures to a significant risk of loss, injury or death involving fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The project site is not located within one-quarter mile of an existing or proposed school. Therefore, criterion E.16(c) is not applicable to the proposed project. Similarly, the project site is not located within an airport land use plan area or in the vicinity of a private airstrip. Therefore, criteria E.16(e) and E.16(f) are also not applicable. Thus, these topics are not discussed further in this Initial Study or in the SEIR.

Summary of Hazards and Hazardous Materials Impacts in Mission Bay FSEIR

The Mission Bay FSEIR addressed issues of hazards and hazardous materials in multiple sections: Health and Safety which addressed the proposed use, storage and disposal of hazardous materials during operation of the Mission Bay plan and emergency response; Contaminated Soil and Groundwater, which addressed issues related to potential soil and groundwater contamination in the Mission Bay plan area; Seismicity, which addressed issues related to emergency access and response; and Community Services and Utilities, which addressed public safety risks. Relevant information on hazards and hazardous materials from these sections is summarized below.

Mission Bay Plan Hazardous Materials Use, Waste Generation and Risk of Upset

Mission Bay Plan Hazardous Materials Use

The Mission Bay FSEIR Health and Safety impacts section indicated that businesses within the Commercial Industrial, Commercial Industrial/Retail and UCSF portions of the Mission Bay plan area would use substantial quantities of hazardous materials. The Mission Bay FSEIR reported that legal and regulatory requirements applicable to hazardous materials operations would require businesses to meet a range of health and safety laws and regulations, and that the implementation of these legally required health and safety measures would adequately address typical health and safety issues related to use and disposal of hazardous materials.

However, the FSEIR acknowledged laws and regulations do not address certain health and safety concerns related to the use of biohazardous materials that could be used by some of the businesses such as UCSF and surrounding businesses that would engage in research and development activities complimentary to UCSF activities. To address the lack of enforceable guidelines as it relates to aerosol transmission of biohazardous materials, the FSEIR identified Mitigation Measures I.1, I.2, and I.3 requiring implementation of appropriate guidelines, filtration of exhausts for Biosafety Level 3 laboratories or equivalent measures to avoid substantial health risks to individuals in the vicinity of the exhaust, and restrictions on the types biohazardous materials that could be used by businesses in the plan area. The FSEIR concluded that with implementation of this mitigation, potential health related to handling of biohazardous materials would be less than significant.

Mission Bay Plan Risk of Upset / Accidents

The Mission Bay FSEIR Health and Safety impacts section described potential safety concerns related to possible hazardous materials accidents and concluded that most accident risks would be adequately addressed by implementing required health and safety plans, providing emergency response training, and providing emergency response services. The Mission Bay FSEIR also stated that releases of highly toxic materials subject to the federal and state Accidental Release Programs could present more of a risk. However, existing regulations require the implementation of appropriate operational measures in accordance with required Risk Management Plans to reduce the possibility and consequences of potential accidents that could pose potential risks to neighboring residents, schools, or other off-site receptors (this is a plan required under state and federal regulations to specify operating and emergency response procedures to prevent a release of highly toxic materials, and is different from the risk management plan for exposure to hazardous materials required by Mission Bay FSEIR Mitigation Measure J.1, as discussed below). The Mission Bay FSEIR concluded that implementation of Risk Management Plans required under the Accidental Release Programs for the use of these toxic materials and compliance with school siting criteria outlined in the California Health and Safety Code, Education Code, and California Code of Regulations would ensure the impacts of accidents involving highly toxic materials would be less than significant.

Mission Bay Contaminated Soil and Groundwater

Setting

The Mission Bay FSEIR Contaminated Soil and Groundwater setting section described historic and current land uses in the Mission Bay plan area. The FSEIR reported that the Mission Bay plan area was filled beginning in 1859 and continuing for approximately 50 years, with the fill consisting primarily of earthquake rubble, municipal garbage, and rock and soil from other locations in the City. The FSEIR reported that uses previously and/or presently on Blocks 29-32 at that time included a range of commercial and industrial uses including, but not limited to, crude oil storage, offices, railroad tracks, trucking-related activities, maintenance and repair facilities, junk yard, stock corral, sand and gravel mixing, and open space. The Mission Bay FSEIR also reported that existing uses at the time of preparation of the FSEIR included a gravel plant, bus company facility, equipment rental, storage yard, railroad tracks, auto body shop, warehouse and parking.

The Mission Bay FSEIR Contaminated Soil and Groundwater setting section also summarized the results of soil and groundwater studies conducted in Mission Bay, including a comprehensive investigation conducted by ENVIRON in 1997 of the entire Mission Bay plan area. The 1997 investigation detected chemicals of various types and concentrations in the soil and groundwater throughout the Mission Bay plan area. The 1997 investigation identified petroleum hydrocarbons in soil, groundwater, and floating on groundwater (called "petroleum free product") in the vicinity of Illinois and 16th Streets (including within Blocks 31 and 32), and attributed the free product to former petroleum bulk storage, pipelines and transfer facilities in the vicinity. The FSEIR determined that concentrations of contaminants in soil or groundwater in the Mission Bay plan area, with the exception of the identified petroleum free product area, did not present a human health or ecological risk under existing conditions. The FSEIR reported that potential effects on near-shore and aquatic organisms associated with the free product were being investigated and if necessary would be remediated by the oil companies responsible for the contamination.

Mission Bay Plan Development (Construction) Effects

The Mission Bay FSEIR Contaminated Soil and Groundwater impact section reported that the proposed development of the Mission Bay plan area could result in potential exposure of workers and the public (including residents, employees and visitors) in the Mission Bay plan area to chemicals in soil and groundwater that could be released during construction. The Mission Bay FSEIR indicated that vacant sites within the Mission Bay plan area could be a source of exposed soils during part or most of the approximately 20-year development period. In addition, the Mission Bay FSEIR indicated construction activities within the Mission Bay plan area that would involve the disturbance of contaminated soil or groundwater would affect increasingly greater number of persons during the later phases of development.

The Mission Bay FSEIR discussed various types of construction activities, including excavation, grading, trenching, soil movement/transport, pile installation, building demolition and removal of underground storage tanks that would potentially expose workers and the public to contaminated soils, dust, soil gases and other hazards. The Mission Bay FSEIR also noted the potential for construction dust-related effects on the aquatic and terrestrial environment. In addition, the FSEIR indicated that construction activities that would have the potential to affect groundwater, including pile driving activities (to potentially contaminate deeper groundwater zones), trenching activities (to result in potential horizontal migration of contaminants in groundwater and soil vapor), and construction dewatering (to potentially influence localized groundwater gradients and spread contaminated groundwater, particularly in and near the area discussed above that was identified with the petroleum free product on the groundwater).

The Mission Bay FSEIR Contaminated Soil and Groundwater section included Mitigation Measures J.1a through J.1k requiring preparation of a Risk Management Plan or Plans (RMP) incorporating specific measures that would provide for the management of risks associated with exposure to contaminated soil and groundwater and would be protective of human health and the aquatic environment. The Mission Bay FSEIR specified that the human health standard to be applied to the Mission Bay plan, as approved by the San Francisco Bay Regional Water Quality Control Board (RWQCB), would be a cumulative cancer risk of 10 in 1 million and a Hazard Index of 1 for non-cancer risks. Mitigation identified in the Mission Bay FSEIR specified minimum parameters to be included in the RMP for the addressing contaminated soils and groundwater prior to and during construction of individual development projects. The mitigation also provided measures for enforcement of the RMP. The Mission Bay FSEIR concluded that implementation of the RMP under the regulatory oversight, jurisdiction, and responsibility of the RWQCB would ensure any effects associated with contaminated soils and groundwater would be less than significant.

Mission Bay Plan Contaminated Soil and Groundwater — Long-Term Occupancy (Post Development) Effects

The 1997 ENVIRON investigation summarized in the Mission Bay FSEIR Contaminated Soil and Groundwater impact section included a quantitative human health and ecological risk assessment to evaluate potential effects on human and aquatic populations upon plan completion. The risk evaluation showed that the potential risks posed by residual contaminants would remain after plan completion would be below applicable human health and aquatic ecological risk criteria. The Mission Bay FSEIR indicated that currently exposed soils would be covered by proposed buildings, pavement, or with open space areas using approved fill materials, that would create a protective barrier, or cap, between residual contaminants in soil and human or ecological populations and required establishment and maintenance of this cap as mitigation. Additional mitigation addressed the re-use of soil and prohibited the use of

shallow groundwater for domestic, industrial, or irrigation purposes unless found acceptable using established risk assessment methodology.

The FSEIR also noted that deed restrictions required for each property within the Mission Bay plan area would place limits on future uses within Mission Bay consistent with the provisions of the RMP, and accordingly, property owners would be required to comply with applicable provisions of the RMP. These proposed RMP measures were included as Mitigation Measures J.1l through J.1o in the Mission Bay FSEIR.

The FSEIR also provided Mitigation Measure J.2 requiring the RMP to include a process for investigating sites proposed for school or child-care center uses within the Mission Bay plan area to ensure these facilities would be properly sited. The Mission Bay FSEIR concluded that the implementation of the RMP would ensure any potential post-development effects on human and aquatic populations would remain less than significant.

Mission Bay Emergency Response

The Mission Bay FSEIR Seismicity impacts section discussed impacts related to exposure of the concentrated population within the Mission Bay plan area to seismic hazards. Although the Mission Bay FSEIR noted that new fire station proposed at that time in Mission Bay South would improve emergency response to the area, the FSEIR also indicated potential difficulties in providing emergency access to the Mission Bay South plan area in the event of a major earthquake. This was determined to be a potentially significant impact. The FSEIR concluded that impacts associated with emergency access in the event of a major earthquake would be less than significant with implementation of Mitigation Measures H.1, H.2, H.3b, and H.5 requiring the project sponsor to store heavy construction equipment capable of negotiating roads damaged by an earthquake, coordinate emergency response plans with the City, and prepare a project-specific emergency response plan, and construct a new fire station.

The Mission Bay FSEIR Health and Safety impacts section also described the potential for a catastrophic event (e.g., an earthquake) to result in accidents involving hazardous materials and causing fires or explosions, requiring emergency response. The Mission Bay FSEIR Health and Safety impacts section determined that with mitigation identified in the FSEIR Seismicity section requiring preparation and implementation of comprehensive emergency preparedness and emergency response plan for the entire Mission Bay plan area, potential impacts to the public from hazardous materials accidents during a catastrophic event would be less than significant.

Mission Bay Plan Interim/Temporary Stormwater Collection Facility Safety Risks

The Mission Bay FSEIR Community Services and Utilities impacts section reported that interim detention basins would be created within the Mission Bay plan area to allow for temporary surface storage of rainwater associated with interim uses within Mission Bay (e.g., paved parking areas). The Mission Bay FSEIR indicated that construction of fencing around any interim detention basins, included as part of the Mission Bay plan and specified in Mitigation Measure M.4 would prevent potential safety impacts associated with humans entering the detention basins.

Impact Evaluation

Risk of Upset

Impact HZ-1: The project could create a significant hazard through routine transport, use, or disposal of hazardous materials or result in a substantial risk of upset involving the release of hazardous materials. (Less than Significant with Mitigation)

Transport, Use, and Disposal of Hazardous Materials

During operation, the proposed event center and other development would use common types of hazardous materials, such as cleaners, disinfectants, and chemical agents required to maintain the sanitation of the public use areas as well as the commercial bathrooms and food preparation areas. These commercial products are labeled to inform users of potential risks and to instruct them in appropriate handling procedures. In addition, the project anticipates installing on-site generators to provide a source of electricity in the event of an outage. These generators would require diesel for operation. Operations may also result in the production of minor amounts of hazardous waste associated with maintenance and cleaning that would require offsite disposition such as disposal or recycling.

As discussed above, the Mission Bay FSEIR Health and Safety impacts section concluded that legally required health and safety measures would adequately address most common health and safety issues related to the use, disposal, and accidental release of common hazardous materials. In San Francisco, the specific regulatory requirements are specified in Articles 21 and 22 of the San Francisco Health Code which provide for the safe handling of hazardous materials and waste in the City. These articles are implemented by the San Francisco Department of Public Health (DPH), which also implements the requirements of state and federal hazardous materials regulations. In accordance with Article 21, any facility that handles hazardous materials in excess of specified quantities would be required to obtain a Certificate of Registration from the DPH and to implement a Hazardous Materials Business Plan (HMBP) that includes inventories, a program for reducing the use of hazardous materials and generation of hazardous wastes, site layouts, a program and implementation plan for training all new employees and annual training for all employees, and emergency response procedures and plans. The proposed event center and individual site uses may also elect to participate in the San Francisco Green Business Program which would promote a reduction in the use of hazardous materials. Article 22 authorizes the DPH to implement the state hazardous waste regulations, including authority to conduct inspections and document compliance. Similarly, the transport of hazardous materials and wastes would be subject to the legal requirements discussed above and in the Mission Bay FSEIR.

As discussed in the Mission Bay FSEIR, use of highly toxic materials, referred to as regulated substances, would be subject to the federal and state Accidental Release Programs. None of the materials anticipated to be used at the arena and other developments would be classified as regulated substances under these programs. However, in the event that regulated substances could be needed for use at the event center (such as refrigerants or other chemicals to support the ice rink), a Risk Management Plan, specifying operational strategies to prevent a release and emergency procedures to be address a release should one occur, would be required in accordance with the California Accidental Release Program as implemented through Article 21A of the San Francisco Health Code as discussed in the FSEIR (this is different than the risk management plan for exposure to hazardous materials in soil and groundwater discussed below in

Impact HZ-2). In addition, none of the materials used would be classified as radioactive, and regulations pertaining to the management of these materials would not apply.

At this time, it is not known specifically what uses might occupy the proposed office development, and the possibility of uses that would handle biohazardous materials cannot be precluded. Thus, as identified in the Mission Bay FSEIR, in the event that there could be future activities that handle biohazardous materials, implementation of FSEIR Mitigation Measures I.1, I.2, and I.3 would reduce potential health and safety impacts to less than significant.

As also discussed above, the Mission Bay FSEIR concluded that the generation of household hazardous wastes from residential uses implemented under the Mission Bay Plan would be less than significant with implementation of appropriate City programs. However, this impact would not apply to the proposed project because it does not include any residential uses.

Implementation of the requirements of Articles 21, 21a and 22 also include implementation of emergency response procedures which would specify methods to prevent a release of hazardous materials, and control a release if one were to occur; this would ensure that impacts related to risk of upset involving a release of hazardous materials would be less than significant.

Given that the project would be required to implement all measures in compliance with all applicable hazardous materials and hazardous waste regulations, operation of the project would not result in any new significant impacts, or increase the severity of previously identified impacts related to the routine use, transport, and disposal of hazardous materials during operation. No new or different mitigation measures are required. With implementation of measures specified in the Mission Bay FSEIR, impacts associated with the routine transport, use, or disposal of hazardous materials or associated with risk of upset involving the release of hazardous materials would be less than significant.

Mitigation Measure M-HZ-1a. Guidelines for Handling Biohazardous Materials

Mission Bay FSEIR Mitigation Measure I.1. Require businesses that handle biohazardous materials and do not receive federal funding to certify that they follow the guidelines published by the National Research Council and the United States Department of Health and Human Services Public Health Service, National Institutes of Health, and Centers for Disease Control, as set forth in Biosafety in Microbiological and Biomedical Laboratories, Guidelines for Research Involving Recombinant DNA Molecules (NIH Guidelines), and Guide for the Care and Use of Laboratory Animals, or their successors, as applicable.

Mission Bay FSEIR Mitigation Measure I.2. Require businesses handling biohazardous materials to certify that they use high efficiency particulate air (HEPA) filters or substantially equivalent devices on all exhaust from Biosafety Level 3 laboratories unless they demonstrate that exhaust from their Biosafety Level 3 laboratories would not pose substantial health or safety hazards to the public or the environment. Require such businesses to certify that they inspect or monitor the filters regularly to ensure proper functioning.

Mission Bay FSEIR Mitigation Measure I.3. Require businesses handling biohazardous materials to certify that they do not handle or use biohazardous materials requiring Biosafety Level 4

containment (i.e., dangerous or exotic materials that pose high risks of life-threatening diseases or aerosol-transmitted infections, or unknown risks of transmission) in the Project Area.

Safety Hazards Associated with Stormwater Detention Basins

As discussed above, the Mission Bay FSEIR Community Services and Utilities impacts section reported that interim detention basins constructed within the Mission Bay plan area to allow for temporary surface storage of rainwater associated with interim uses would present a safety hazard. The FSEIR included mitigation requiring construction of fencing around any interim detention basins. However, there would be no interim stormwater detention ponds constructed on the site under the proposed project. Therefore this impact would not be applicable to the proposed project, and the project would not result in any new or more severe impacts relative to those analyzed in the Mission Bay FSEIR. Mitigation Measure M.4 does not apply to the project, and no new or different mitigation measures are required.

Risk of Upset Involving Exposure to Naturally Occurring Asbestos

Naturally occurring asbestos was identified as a Toxic Air Contaminant (TAC) in 1986 by the California Air Resources Board (CARB) and is present in many parts of California. It is commonly associated with serpentine⁶⁶ and ultramafic⁶⁷ rock types such as Franciscan Complex mélange. Chrysotile (a form of asbestos from the serpentine mineral group) and amphibole asbestos (including crocidolite) are naturally occurring asbestos minerals that may present a human health hazard, if they become airborne.

The Mission Bay FEIR and FSEIR did not specifically address impacts associated with exposure to naturally occurring asbestos during construction of development projects under the Mission Bay Plan. However, the preliminary geotechnical evaluation completed for the project notes that the artificial fill at the site contains cobble and boulder sized pieces of serpentinite.⁶⁸ Therefore, if naturally occurring asbestos is present in the serpentinite within the artificial fill to be excavated, the workers and the public could be exposed to naturally occurring asbestos during excavation activities.

In 2001, the CARB adopted the Asbestos Airborne Toxic Control Measure (Asbestos ATCM) for Construction, Grading, Quarrying, and Surface Mining Operations in areas of serpentine and other ultramafic rocks (17 CCR Section 93105), which became effective in July 2002. The ATCM protects public health and the environment by requiring the use of best available dust mitigation measures to prevent off-site migration of asbestos-containing dust from road construction and maintenance activities, construction and grading operations, and quarrying and surface mining operations in areas of ultramafic rock, serpentine, or asbestos. The Bay Area Air Quality Management District (BAAQMD) implements the regulation.

⁶⁶ Serpentinite is a rock consisting of one or more serpentine minerals formed when ultramafic rocks have been metamorphosed (ultramafic rocks are formed in high-temperature environments well below the surface of the earth), and is commonly associated with ultramafic rock along faults such as the San Andreas fault. Serpentinite commonly contains chrysotile, an asbestiform variety of the serpentine minerals. Amphibole asbestos is also found in some forms of Franciscan Complex bedrock such as blueschist.

⁶⁷ Ultramafic rocks are one type of igneous rock (formed at high temperatures well below the surface of the earth) that is rich in iron and magnesium.

⁶⁸ Langan Treadwell Rollo, 2014. *Preliminary Geotechnical Investigation, Block 29-32 Mission Bay, San Francisco, California*. March 28.

For construction activities that would disturb more than 1 acre of land such as the proposed project, construction contractors are required to prepare an asbestos dust mitigation plan specifying measures that will be taken to ensure that no visible dust crosses the property boundary during construction. The asbestos dust mitigation plan must be submitted to and approved by the BAAQMD prior to the beginning of construction, and the site operator must ensure the implementation of all specified dust mitigation measures throughout the construction project. In addition, the BAAQMD may require air monitoring for off-site migration of asbestos dust during construction activities and may change the plan on the basis of the air monitoring results. Title 17 CCR Section 93105(h)(9) defines asbestos containing material as any material that has an asbestos content of 0.25 percent or greater.

While there is a well-established regulatory framework for managing naturally occurring asbestos during construction, this impact would be potentially significant because no sampling has been conducted to establish the asbestos content in the fill materials that would be excavated during construction. This impact would be reduced to a less-than-significant level with implementation of Mitigation Measure M-HZ-1b, identified in this Initial Study, requiring the project sponsor to implement a geologic investigation to assess the naturally occurring asbestos content of the fill materials. This mitigation also requires the project sponsor to implement the requirements of the asbestos ATCM, including implementation of a Dust Mitigation Plan for naturally-occurring asbestos, if the investigation determines that the asbestos content of the fill is 0.25 percent or greater. Implementation of this measure would ensure that if naturally occurring asbestos is present, no visible dust crosses the project boundaries, and could also require air monitoring to demonstrate compliance with this criterion if deemed necessary by the BAAQMD. Rock containing naturally occurring asbestos that would be disposed of off-site would not be considered a hazardous waste under California regulations.⁶⁹

Mitigation Measure M-HZ-1b: Geologic Investigation and Dust Mitigation Plan for Naturally Occurring Asbestos

The project sponsor shall conduct a geologic investigation in accordance with the guidelines of the California Geologic Survey⁷⁰ to determine the naturally occurring asbestos content of fill materials to be excavated at the project site. If the investigation determines that the naturally occurring asbestos content of the fill materials is 0.25 percent or greater, the project sponsor or its construction contractor shall submit the appropriate notification forms and prepare an asbestos dust mitigation plan in accordance with the Asbestos ATCM. The plan shall specify measures that will be taken to ensure that no visible dust crosses the property boundary during construction. The plan must specify the following measures:

- Prevent and control visible track-out from the property
- Ensure adequate wetting or covering of active storage piles
- Control disturbed surface areas and storage piles that would remain inactive for 7 days

⁶⁹ Department of Toxic Substances Control, 2000. *Letter to Jon A. Morgan, Director, Environmental Management Department, County of El Dorado. Naturally Occurring Asbestos*. January 20.

⁷⁰ California Geologic Survey, 2002. *Guidelines for Geologic Investigations of Naturally Occurring Asbestos in California. Special Publication 124*.

- Control traffic on on-site unpaved roads, parking lots, and staging areas, including a maximum vehicle speed of 15 miles per hour
- Control earthmoving activities
- Control offsite transport of dust emissions that contain naturally-occurring asbestos-containing materials
- Stabilize disturbed areas following construction

The asbestos dust mitigation plan shall be submitted to and approved by the Bay Area Air Quality Management District (BAAQMD) prior to the beginning of construction, and the site operator must ensure the implementation of all specified dust mitigation measures throughout the construction project. In addition, if required by the BAAQMD, the project sponsor or a qualified third party consultant shall conduct air monitoring for offsite migration of asbestos dust during construction activities and shall modify the dust mitigation plan on the basis of the air monitoring results if necessary.

Implementation of Mitigation Measure M-HZ-1b, above, would reduce impacts associated with potential exposure to naturally occurring asbestos during construction to less than significant.

Contaminated Soil and Groundwater

Impact HZ-2: The project would be located on a site identified on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Excavation could also require the handling of potentially contaminated soil and groundwater, potentially exposing workers and the public to hazardous materials, or resulting in a release into the environment during construction. (Less than Significant with Mitigation)

As discussed above, the Mission Bay FSEIR Contaminated Soil and Groundwater setting section states that Blocks 29-32 were historically used for a variety of industrial and commercial uses. A Phase I Environmental Site Assessment⁷¹ conducted in support of the proposed project also notes specific former uses on the site (between 1902 and 2010) included bulk fuel storage and distribution; railroad operations; a machine shop; boiler house; steel mill; well casing manufacturer; warehousing, shipping and receiving operations for a variety of products; fruit cannery, junk yards, vehicle parking and maintenance facilities and a ready-mix concrete facility.

As summarized in the Mission Bay FSEIR, a 1997 investigation conducted to evaluate soil and groundwater quality throughout the Mission Bay plan area identified petroleum hydrocarbons in soil, groundwater, and floating on groundwater (petroleum free product) in the vicinity of Illinois and 16th Streets (including within Blocks 31 and 32), and attributed the free product to former petroleum bulk storage as well as pipelines and transfer facilities in the vicinity. This area is collectively referred to as the Pier 64 area. As summarized in the FSEIR, the concentrations of contaminants in soil or groundwater in the Mission Bay

⁷¹ Langan Treadwell Rollo, 2014. Updated Phase I Environmental Site Assessment, Site X, Mission Bay Blocks 29-32, San Francisco, California. April 11.

plan area, with the exception of the identified petroleum free product area, did not present a human health or ecological risk under existing conditions.

Actions Completed Since Publication of the Mission Bay FSEIR

Risk Management Plan. Subsequent to publication of the Mission Bay FSEIR, a RMP was prepared and approved by the RWQCB in 1999 to address risk management measures to be implemented prior to development, during development (during construction), after development of specific parcels within the Mission Bay plan area.⁷² All risk management measures in the RMP are deemed to be protective of human health and the environment under the conditions specific to each phase of development.

Measures to be implemented prior to development are intended to manage risks associated with exposed soil before a site is developed and are protective of populations at and adjacent to the undeveloped parcel. Measures to be implemented during development are intended to manage risks during construction and are protective of construction site workers and the surrounding public. They include dust control measures, soil management protocols, stormwater pollution plan requirements, worker health and safety planning requirements, contingency requirements in the event that previously unidentified underground structures or contamination are identified, protocols for dewatering activities, and a framework for complying with the requirements of Article 20 of the San Francisco Health Code, commonly referred to as the Maher Ordinance (note that this ordinance was subsequently revised in 2013, and is now codified in Article 22A of the San Francisco Health Code). Several of the measures apply specifically to the free product area where the project site is located; these measures are intended to control the release and migration of free product during project construction.

Risk management measures to be implemented after development are intended to manage risks to site occupants and ensure that they would have no contact with site soils and groundwater as well as risks to maintenance and utility workers that may contact soil left in place during their normal work activities. They include covering of exposed areas; limiting future residential development within the Mission Bay plan area to preclude single family homes with private front or back yards; restricting the future use of groundwater for domestic, industrial, or irrigation purposes; providing protocols for future subsurface activities; and implementing a long-term groundwater monitoring program.

In addition, the RMP specifies the process to ensure regulatory oversight of development activities within the Mission Bay plan area. Owners must specifically notify the RWQCB in advance of initiating construction and must also submit a dust monitoring notification to the RWQCB and DPH. In addition, the owner must document compliance with specified measures to the RWQCB and must also notify the RWQCB of any unanticipated structures or contamination encountered during construction, as well as any unanticipated environmental conditions not covered by the RMP. The owner must also submit quarterly reports to the RWQCB during construction and a completion letter once construction is complete.

As stated in the RMP, completion of this RMP satisfies the requirements of Mission Bay FSEIR Mitigation Measure J.1 and provides guidelines for implementing Mitigation Measure J.2, described above. The requirements of the RMP are enforced through an environmental covenant recorded against each parcel in

⁷² Environ Corporation, 1999. *Risk Management Plan, Mission Bay Area, San Francisco, California*. May 11.

the Mission Bay plan area. The environmental covenant requires compliance with the RMP and runs with the property, binding future site owners to also comply with the requirements of the RMP.

Site Investigations and Remediation, and Regulatory Actions. As summarized in the Phase I Environmental Site Assessment completed for the project, the RWQCB adopted Order No. R2-2005-0028 in 2005 which established cleanup requirements for the Pier 64 area. The order divided the Pier 64 area into six operable units; portions of the Blocks 29-32 are located within the "North Terminal Operable Unit." The site has been subject to several site investigations, underground tank removals, and remedial actions to address contaminants in the soil and groundwater prior to and pursuant to this order. As reported in the Phase I Environmental Site Assessment, the underground storage tank removals and remedial actions completed include:

Removal of a 13,500 gallon diesel underground storage tank from Block 31 in 1987 and a 1,000 gallon gasoline underground storage tank from Block 32 in 1997. These underground storage tanks were located with the area of the free petroleum product plume and free product in this area was removed during the remediation conducted in 2005 (discussed below);

Removal of a 4,000 gallon diesel underground storage tank, a 10,000 gallon underground tank, and a 5,000 gallon gasoline underground storage tank occurred in 1995. These tanks were located in portions of Blocks 29 and 31 that are outside of the North Terminal Operable Unit. Localized soil and groundwater affected by petroleum hydrocarbons were addressed at the time of tank removal. These tanks were removed under the oversight and authority of the DPH Local Oversight Program and RWQCB, and case closure was granted in February 1995.

The Phase I soil remediation conducted in 2001 included the removal of approximately 14,020 tons of visibly stained soil to a depth of approximately 2 feet below the groundwater table (a total depth of approximately 9 feet below ground surface) as well as petroleum pipelines encountered during excavation. During this remediation, free petroleum product accumulated on the groundwater surface was removed from the excavated area, and the excavation was backfilled.

The Phase II remediation conducted in 2005 which included demolition of the existing site structures and removal of approximately 90,000 tons of soil containing petroleum hydrocarbons from the North Terminal Operable Unit and adjacent areas. This excavation also extended to approximately two feet below the groundwater table, or nine feet below ground surface. During this remediation, free petroleum product accumulated on the groundwater surface was removed from the excavated area, and the excavation was backfilled. The revised RMP (described below) indicates that the site was not returned to original grade at this time, but that it would be the property owner's responsibility.

On December 22, 2006, the RWQCB issued a no further action letter stating that no further soil remediation was required. With completion of the above activities, and based on the results of a groundwater monitoring program required by the RWQCB, twenty groundwater monitoring wells installed in the Pier 64 area as part of the groundwater monitoring program were properly abandoned in June, 2013.

A Revised Risk Management Plan (RRMP) was prepared in 2006 in accordance with Order R2-2005-028 to reflect remedial actions conducted within the Pier 64 area in 2001 and 2005.⁷³ The RRMP determined that based on completion of the above described remedial actions, the risk management measures required prior to development no longer applied to the North Terminal Operable Unit where the proposed project is located. All of the RMP risk management measures applicable during development and after development would still apply, with the exception of those measures specific to development in the free product area (because the previous remediations in the North Terminal Operable Unit successfully removed from product within this area).

As stated in the RRMP, Catellus (the then owner of the North Terminal Operable Unit) and the City and County of San Francisco each recorded a Covenant and Environmental Restriction (deed restriction) on the property that, among other things, required property owners to comply with the terms of the Mission Bay RMP. Because this Covenant and Environmental Restriction will run with the property as discussed in the RMP, future site owners (including the project sponsor) will be subject to the requirements of the RMP. In 2014, the RWQCB issued order R2-2014-022 rescinding Order R2-2005-2008 because the above-described remediations and groundwater monitoring satisfied the requirements of that order. Order R2-2014-022 states that any residual contamination in the Pier 64 area poses acceptable risks to human health and the environment and can be effectively managed using the existing Mission Bay RMP.

While the completion of remedial actions described above would be considered substantial changes that have occurred at the project site, implementation of these actions has effectively removed free petroleum products in the Pier 64 area and reduced risks to human health and the environment in this area compared to conditions described in the FSEIR. With implementation of the Mission Bay RMP, prepared in accordance with Mission Bay FSEIR Mitigation Measure J.1, human health and environmental health risks would remain within acceptable levels, and the proposed project would not result in new or more severe impacts relative to the Mission Bay FSEIR.

Preparation of the Mission Bay RMP satisfies the requirements of Mission Bay FSEIR Mitigation Measure J.1; therefore this mitigation does not apply to the proposed project. In addition, compliance with the RMP as required by the deed restriction would ensure that human health and environmental risks during and after development of the proposed project would be within acceptable levels and no new or different mitigation would be required.

As stated above, the RWQCB has determined that the Mission Bay RMP, completed in accordance with Mission Bay FSEIR Mitigation Measure J.1, adequately addresses human health and environmental risks during and after development of the proposed project. Therefore, Mitigation Measure J.1, already implemented, adequately addresses impacts associated with contaminated soil and groundwater. Compliance with the RMP, as required by the deed restriction, would ensure that human health and environmental risks during and after development of the proposed project would be within acceptable levels and no new or different mitigation would be required. Furthermore, in the event that child care facilities were to occur under the proposed project, implementation of FSEIR Mitigation Measure J.2 would reduce this impact to less than significant.

⁷³ BBL Environmental Services, Inc., 2006. *Revised Risk Management Plan, Former Petroleum Terminals and Related Pipelines Located at Pier 64 and Vicinity, City and County of San Francisco, California*. August.

Mitigation Measure M-HZ-2: RMP Provisions for Child Care Facilities

Mission Bay FSEIR Mitigation Measure J.2. Carry out a site-specific risk evaluation for each site in a non-residential area proposed to be used for a public school or child care facility; submit to RWQCB for review and approval. If cancer risks exceed 1×10^{-5} and/or noncancer risk exceeds a Hazard Index of 1, carry out remediation designed to reduce risks to meet these standards or select another site that is shown to meet these standards.

Emergency Response

Impact HZ-3: The project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan or expose people or structures to a significant risk of loss, injury or death involving fires. (Less than Significant)

The proposed project would increase the number of employees and visitors in the Mission Bay South area. There would be an additional 2,728 new full-time equivalent (FTE) employees associated with the team operations and event center management, retail and office uses, and additional 1,000 day-of-game staff during a game/event at the event center. Depending on the game/event up to 18,500 patrons could be attendance at the event center, and there would be additional visitors associated with the retail uses. The project employees and visitors could contribute to congestion if an emergency evacuation of the Mission Bay plan area were required. As discussed above, the Mission Bay FSEIR Seismicity impact section concluded that with implementation of mitigation requiring the project sponsor to store heavy construction equipment capable of negotiating roads damaged by an earthquake, coordinate emergency response plans with the City, prepare a project-specific emergency response plan, and construct a new fire station, impacts associated with emergency access in the event of a major earthquake would be less than significant.

Section 12.202(e)(1) of the San Francisco Fire Code currently requires that all owners of high-rise buildings (taller than 75 feet), such as the event center and office buildings, “shall establish or cause to be established procedures to be followed in case of fire or other emergencies. All such procedures shall be reviewed and approved by the chief of division.” Additionally, project construction would have to conform to the provisions of the Building Code and Fire Code, which require additional life-safety protections for high-rise buildings and the final building plans for the new facilities would be reviewed by the San Francisco Fire Department (as well as DBI) to ensure conformance with the applicable provisions, including development of an emergency procedure manual and an exit drill plan. This regulatory requirement fulfills the intent of Mitigation Measure H.3b.

Although not “adopted” by legislative action, the City has a published Emergency Response Plan dated 2009 and prepared by the Department of Emergency Management as part of the City’s Emergency Management Program.⁷⁴ This plan includes plans for hazard mitigation and disaster preparedness and recovery, and identifies hazards to which San Francisco is particularly susceptible such as earthquake, hurricane, tsunami, flood, winter storm, and act of terrorism, including use of chemical, biological, radiological, nuclear, and explosive weapons. The Emergency Response Plan complies with several relevant

⁷⁴ San Francisco Department of Emergency Management, City and County of San Francisco Emergency Response Plan, December 2010. Available at: <http://www.sfdem.org/Modules/ShowDocument.aspx?documentid=1154>. Reviewed September 9, 2011.

state and federal directives for emergency planning, including the California Standardized Emergency Management System and the Incident Command System. The Plan includes sections on operations, including management and procedures; staffing, operations, and logistics regarding the City's emergency operations center; and mutual aid involving other agencies. The Emergency Response Plan assigns responsibilities for disaster planning, operations (including fire and rescue, law enforcement, human services, infrastructure, transportation, communications, and community support), and logistics, as well as finance and administration, to City agencies and departments. The Emergency Response Plan also identifies volunteer agencies, such as the American Red Cross, that are integral to disaster response efforts.

The Emergency Response Plan contains 16 "annexes" (similar to appendices), consistent with a federally established framework, that cover topics including firefighting, public works and engineering, mass casualty care, and earthquakes, among numerous others. The Earthquake Annex, in particular, sets forth planning assumptions for a series of earthquakes of varying magnitudes on different faults, and sets forth procedures for assessment of damage and injuries, and operational response and strategies in the event of a major earthquake.

Implementation of the project would increase the number of on-site employees and also the number of visitors that would be subject to a potential disaster, including a major earthquake or any of the other hazards identified in the Emergency Response Plan. However, in the event of such a disaster, implementation of the San Francisco Emergency Response Plan, prepared in 2008 (subsequent to publication of the Mission Bay FSEIR) would ensure that adequate city resources are available for response. Implementation of the site-specific emergency response plan required under the Fire Code, and life safety requirements of the Building and Fire Codes as described above would ensure that the proposed project would not obstruct implementation of the City's Emergency Response Plan, nor would it necessarily interfere with emergency evacuation planning. Preparation of the Emergency Response Plan, and implementation of these regulatory requirements fulfill the intent of Mission Bay FSEIR Mitigation Measures H.1 and H.2, therefore these measures do not apply to the proposed project.

In addition, the project site is located adjacent to Third Street, a primary evacuation route identified in the Emergency Response Plan. In addition, Terry A. François Boulevard is a designated Tsunami Evacuation Route. Project construction could interfere with implementation of the Emergency Response Plan if construction activities restricted access for emergency response vehicles or evacuating vehicles. However, any construction activities that could restrict access would be of a temporary nature. The Construction Management Plan required as part of the San Francisco Municipal Transportation Agency's Transportation Advisory Staff Committee would address localized construction effects (such as increased traffic and the need for coordination with emergency response providers) prior to construction. The plan would include measures to minimize construction-related disruptions and would be reviewed by the multi-agency Transportation Advisory Staff Committee. Due to the short duration of disruption and required coordination and review of the project's construction management plan, construction would not likely interfere with the Emergency Response Plan. Issues related to long-term emergency access will be discussed in the SEIR under the Transportation section.

Although not discussed in the Mission Bay FSEIR, the project would be constructed in a developed area of San Francisco, which lacks an "urban-wildland interface" and where fire, medical, and police services are available and provided. The street grid provides ample access for emergency responders and egress for

event attendees and workers, and the proposed project would neither directly nor indirectly alter that situation. Therefore, the proposed project would not directly or indirectly result in the additional exposure of persons to fire risk.

Construction of the new Public Safety Building at Third Street and Mission Rock was completed in the summer of 2014, and satisfies the requirements of Mission Bay FSEIR Mitigation Measure H.5. Therefore, this mitigation measure is no longer applicable to the proposed project.

As discussed above, implementation of the city's Emergency Response Plan, the site-specific emergency response plan required under the Fire Code, and life safety requirements of the Building and Fire Codes would ensure that the proposed project would not obstruct implementation of the City's Emergency Response Plan, nor would it necessarily interfere with emergency evacuation. These regulatory requirements fulfill the requirements of mitigation specified in the Mission Bay FSEIR for this impact, and no additional mitigation is required.

Cumulative Impacts

Impact C-HZ-1: The project, in combination with past, present, and reasonably foreseeable future projects in the site vicinity, would not result in a considerable contribution to cumulative impacts related to hazardous materials. (Less than Significant)

Hazardous materials impacts related to implementation of the proposed project could result from use of hazardous materials (Impact HZ-1), excavation within materials containing naturally occurring asbestos (Impact HZ-1), and conducting construction activities within potentially contaminated soil and groundwater and subsequent use of the site (Impact HZ-2). These impacts would be primarily restricted to the project site and immediate vicinity; therefore, the geographic scope for cumulative impacts related to hazards includes the project site and immediate vicinity.

As discussed above, the project would not result in any significant impacts with respect to hazards or hazardous materials that could not be mitigated to a less-than-significant level. All cumulative development in San Francisco would be subject to the same regulatory framework as would the project for the transport use, and storage of hazardous materials (Impact HZ-1) and compliance with these existing regulations would serve to minimize any cumulative impacts.

The project could result in exposure to naturally occurring asbestos during construction (Impact HZ-1), and cumulative projects in the area could also encounter these materials potentially resulting in a significant cumulative impact. However, implementation of Mitigation Measure M-HZ-1a requiring a geologic investigation, and compliance with the Asbestos ATCM would ensure that the project's contribution to this cumulative impact is less than significant with mitigation.

With implementation of the RMP for the entire Mission Bay Plan area, cumulative impacts related to soil and groundwater contamination would be less than significant as discussed in Impact HZ-2. Similarly, other projects within the Plan area would be required to investigate and, as necessary, abate soil and groundwater contamination on a project-by-project basis in accordance with Article 22A of the San Francisco Health Code. Therefore, cumulative impacts related to soil and groundwater contamination would be less than significant.

The Mission Bay FSEIR concluded that the effort to address cumulative hazardous waste generation and disposal impacts related to large quantity hazardous waste generators would require additional commitment of federal, State, and other local agencies. Therefore, efforts to offset the plan contribution to cumulative hazardous waste generation and disposal effects may not be successful, resulting in a residual impact that may be significant and unavoidable. However, as discussed in impact HZ-1, the project would only generate small quantities of hazardous wastes associated with maintenance and cleaning. Therefore, the project would not have a cumulatively considerable contribution to this cumulative impact, such that there would be no new or substantially more severe impact than what was identified in the Mission Bay FSEIR.

Issues related to long term emergency access will be discussed in the SEIR under the Transportation section.

Topics:	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
17. MINERAL AND ENERGY RESOURCES—Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Encourage activities which result in the use of large amounts of fuel, water, or energy, or use these in a wasteful manner?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Mission Bay FSEIR did not specifically address potential impacts of the Mission Bay plan on mineral resources. However, the project site at Blocks 29-32 does not contain any known mineral resources delineated in the San Francisco General Plan or any other land use plans and does not include mineral resources that are of value to the region and the residents of the state.⁷⁵ Therefore, criteria E.17(a) and E.17(b) do not apply to the proposed project, and these topics are not discussed further in this Initial Study or in the SEIR.

Summary of Energy Resource Impacts in Mission Bay FSEIR

The Mission Bay FSEIR Initial Study Energy/Natural Resources section estimated that existing operational energy consumption within Mission Bay in 1998 was approximately 160 billion Btu⁷⁶ annually for electricity and natural gas sources, and approximately 420 billion Btu annually for transportation sources.

⁷⁵ California Department of Conservation, Division of Mines and Geology, 1996. Update of Mineral Land Classification: Aggregate Materials in the South San Francisco Bay Production-Consumption Zone, Open File Report 96-03.

⁷⁶ Electric energy is usually measured in kilowatt hours (kWh), and natural gas in million cubic feet (MMcf). Both may be converted to British thermal units (Btu); 1 Btu is the quantity of heat necessary to raise the temperature of 1 pound of water 1 degree Fahrenheit.

The Mission Bay FSEIR Initial Study estimated that at buildout, operational energy consumption from the Mission Bay plan would be about 2,109 billion Btu annually for electricity and natural gas sources, and 3,212 billion Btu annually for transportation sources. However, impacts associated with this increase in energy use were considered less than significant because compliance with Title 24 Energy Conservation Standards would ensure that electricity and natural gas would not be used in a wasteful manner. The Mission Bay FSEIR Initial Study Energy/Natural Resources section estimated that construction of projects under the Mission Bay plan would consume approximately 20,645 billion Btu. As such, the Mission Bay FSEIR identified no significant impacts to energy resources from the Mission Bay plan, and accordingly, did not require any mitigation measures related to energy resources.

The Mission Bay FSEIR Community Services and Utilities impacts section estimated the Mission Bay plan would require approximately 2.9 million gallons per day (mgd) of water at build-out. The FSEIR specified water conservation measures, proposed as part of the plan and included as Mitigation Measures M.2a through M.2f that would ensure that the effects of plan implementation on water supply would remain less than significant.

Impact Evaluation

Energy and Water Use

Impact ME-1: The project would not result in the use of large amounts of fuel, water, or energy, or use these in a wasteful manner. (Less than Significant)

Construction Energy

As discussed above, the Mission Bay FSEIR Initial Study Energy/Natural Resources section estimated that the construction of development projects under the Mission Bay Plan would use approximately 20,645 billion Btu of energy. Construction of the event center and other proposed developments would also require the use of fuel, energy, and water. The FSEIR did not estimate energy consumption specific to the development of proposed on Blocks 29-32 or the amount of water that would be used during construction. However, the amount of these resources used for construction of the proposed project would be typical of a normal construction project in San Francisco, and energy consumption would be expected to be commensurate with the percentage of development at this site relative to total development under the Plan. Therefore, as indicated in the FSEIR, the use of these resources during construction would not be wasteful, and impacts related to the use of energy resources during construction would be less than significant. No new mitigation would be required.

Operational Energy and Water Resources

Fuels. As stated above, the Mission Bay FSEIR estimated that at full build out of the Mission Bay plan, fuel usage for transportation would be 3,212 billion Btu, approximately 8 times greater than the use of fuels at the time of FSEIR publication. The amount of fuel use attributable to development on Blocks 29-32 was not specifically calculated in the FSEIR.

The project could contribute to the estimated increase in the use of transportation fuels by introducing new event attendees, employees, and site visitors to the project site. However, as described in the Project

Description, the event center and other proposed developments will be served by multiple public transportation opportunities; Terry A. François Boulevard would be realigned and reconfigured to include a two-way bicycle route; the project would ensure access to bicycle parking and incorporate alternative transportation facilities. With these features, the event attendees, employees, and site visitors would be encouraged to use public transportation or use alternative transportation methods. Should one travel in a personal vehicle, the use of low emission and fuel efficient vehicles would be encouraged by providing designated parking spots in the parking garage in accordance with Section 5.103.1.10 of the San Francisco Green Building Code. Therefore, the project would not result in the wasteful use of transportation fuels and this impact would be less than significant. No new mitigation is necessary.

Energy. The Mission Bay FSEIR did not estimate energy consumption specific to the development proposed on Blocks 29-32, but concluded that compliance with Title 24 Energy Conservation Standards would ensure that the area-wide 13 fold increase in energy use at full build out in the Mission Bay plan area would not result in a wasteful use of energy.

The proposed event center and other proposed developments would require the use of energy for purposes such as lighting, heating, cooling, ventilation, food storage and preparation, and equipment operation. Subsequent to publication of the Mission Bay FSEIR, San Francisco adopted its own green building code, implementing the California Green Building Code and California Building Energy Efficiency Standards, with amendments. Accordingly, the design of the buildings would need to meet or exceed the energy efficiency requirements of the 2013 San Francisco Green Building Code which, at a minimum, would require compliance with the 2013 California Building Energy Efficiency Standards. In accordance with the San Francisco Green Building Code, the project would be designed to Leadership in Energy and Environmental Design (LEED) Gold standards, including provision of either some on-site renewable energy or purchase of green energy credits. Alternatively, the project could exceed the energy efficiency requirements specified in the 2013 California Building Energy Efficiency Standards by 10 percent. In addition, in accordance with the San Francisco Green Building Code, the project sponsor would be required to commission the building's energy systems and components to verify that they meet the energy code requirements.

As described in the Project Description, the project would use a campus approach for LEED certification. This approach treats the entire site as a shared campus, allowing several LEED credits to be pre-approved under a campus site application and then referenced by each individual or group of buildings located on the site. The arena would pursue LEED for New Construction certification as an individual building, while the mixed-use development would pursue LEED for Core and Shell certification as a group project. Some examples of energy conservation measures that could be addressed in the building designs include sustainable building envelope strategies; shading; plug load reduction such as occupancy and daylight sensors; VAV demand control ventilation systems; water-cooled chillers, variable speed pumps, and airside/waterside economizers.

No new mitigation measures or alternatives are required because, as for the Mission Bay FSEIR, compliance with Title 24 regulations and now the San Francisco Green Building Code would ensure that the proposed project would not use energy in a wasteful manner.

Water. As discussed above, the Mission Bay FSEIR Community Services and Utilities impacts section estimated the Mission Bay plan would require approximately 2.9 million gallons per day (mgd) of water at build-out and specified water conservation measures, proposed as part of the plan and included as mitigation, that would ensure that the effects of plan implementation on water supply would remain less than significant. Implementation of these measures would also ensure that water used under Mission Bay plan would not be used in a wasteful manner.

The proposed project would require the indoor use of water for toilet flushing and other sanitary needs, food preparation, and other indoor activities. However, the project would be required to comply with the water conservation measures specified in the 2013 California Green Building Code. Further, in accordance with the 2013 San Francisco Green Building Code, the project sponsor would be required to incorporate plumbing fixtures and fixture fittings to reduce the amount of potable water used by 30 percent. If and when a supply of recycled water becomes available through the Eastside Recycled Water Project⁷⁷ the project would also use recycled water for non-potable uses.

For outdoor water use (landscape irrigation), the project sponsor would be required to use climate-appropriate plants and submit the required landscape documentation to the SFPUC in accordance with the San Francisco Water Efficient Irrigation Ordinance and the San Francisco Green Landscaping Ordinance. Installation of weather- or soil moisture-based irrigation controllers that would automatically adjust irrigation in response to changes in plants' needs as weather conditions change would also be required.

Compliance with the above standards would ensure that water is not used wastefully during operation of the event center and other proposed developments, and would in effect implement FSEIR Mitigation Measures M.2a through M.2f. Therefore, impacts related to wasteful use of water would be less than significant and FSEIR Mitigation Measures M.2a through M.2f are no longer required for the proposed project. No new mitigation measures are required.

Cumulative Impacts

Impact C-ME-1: The project, in combination with other past, present, and reasonably foreseeable future projects, would not result in significant adverse cumulative impacts on energy resources. (Less than Significant)

The proposed project would use fuel, energy, and water. Although other projects in the region would also use these resources, cumulative impacts would be less than significant because all of the regional projects, including the proposed project, would be required to comply with the California Green Building Standards Code and Building Energy Efficiency Standards at a minimum. Furthermore, many of the regional projects would also be subject to local green building requirements such as those of the City and County of San Francisco, which must be as stringent as the state requirements and are often more stringent. These building codes encourage sustainable construction and operational practices related to planning and design,

⁷⁷ The SFPUC plans to provide 2 million gallons per day of high quality recycled water to the customers in the east side of the City through the Eastside Recycled Water Project for non-potable uses such as irrigation and toilet flushing. This project is still in the planning stages, and the implementation date is uncertain.

energy efficiency, water efficiency, and conservation. Therefore, cumulative impacts related to wasteful use of fuel, energy, and water resources would be less than significant.

Topics:	<i>Potentially Significant Effects Not Identified in Prior EIR</i>	<i>Potentially Substantial Increase in Severity of Significant Impact Identified in Prior EIR</i>	<i>Sponsor Declines to Adopt Feasible Mitigation Measures or Alternatives</i>	<i>No New or More Severe Significant Effects</i>
----------------	--	---	---	--

18. AGRICULTURE AND FOREST RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.

—Would the project

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)) or timberland (as defined by Public Resources Code Section 4526)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Mission Bay FSEIR did not specifically address potential impacts of the Mission Bay plan on agriculture and forest resources. However, the project site at Blocks 29-32 does not contain any prime farmland, unique farmland, farmland of statewide importance, forest, or timberlands; does not support agricultural or timber uses; is not zoned for agricultural or timber uses; and is not under a Williamson Act contract. Therefore, none of the agriculture and forest resources significance criteria are applicable to the proposed project, and these topics are not discussed further in this Initial Study or in the SEIR.

F. MITIGATION MEASURES

This section lists the mitigation measures identified in this Initial Study. Implementation of these measures would mitigate significant project environmental impacts, and/or considerable project contribution to cumulative environmental impacts such that all corresponding impacts would be reduced to less than significant. The listed mitigation measures include those measures originally identified in the Mission Bay FSEIR that are applicable to the proposed project, as well as certain new mitigation measures identified in this Initial Study to reduce potential impacts to less than significant. Mitigation measures are numbered to correspond to the Initial Study impact number, with a cross reference to the impact numbering system from the Mission Bay FSEIR where appropriate.

It should also be noted that certain mitigation measures identified in the Mission Bay FSEIR are no longer applicable to the proposed project, as described in Section E above; those measures are not listed in this section. For those topics and impact areas to be analyzed in the SEIR, additional mitigation measures will be identified in the SEIR as needed.

Mitigation Measure M-CP-2a: Archaeological Testing, Monitoring and/or Data Recovery Program

Based on a reasonable presumption that archaeological resources may be present within the project site, the following measures shall be undertaken to avoid any potentially significant adverse effect from the proposed project on buried or submerged historical resources. The project sponsor shall retain the services of an archaeological consultant approved by OCII or its designated representative such as those from the rotational Department Qualified Archaeological Consultants List (QACL) maintained by the Planning Department archaeologist. The project sponsor shall contact the Department archaeologist to obtain the names and contact information for the next three archaeological consultants on the QACL. The archaeological consultant shall undertake an archaeological testing program as specified herein. In addition, the consultant shall be available to conduct an archaeological monitoring and/or data recovery program if required pursuant to this measure. The archaeological consultant's work shall be conducted in accordance with this measure at the direction of OCII or its designated representative. All plans and reports prepared by the consultant as specified herein shall be submitted first and directly to OCII or its designated representative for review and comment, and shall be considered draft reports subject to revision until final approval by OCII or its designated representative. Archaeological monitoring and/or data recovery programs required by this measure could suspend construction of the project for up to a maximum of four weeks. At the direction of the OCII or its designated representative, the suspension of construction can be extended beyond four weeks only if such a suspension is the only feasible means to reduce to a less than significant level potential effects on a significant archaeological resource as defined in CEQA Guidelines Sect. 15064.5 (a)(c).

Consultation with Descendant Communities: On discovery of an archaeological site⁷⁸ associated with descendant Native Americans, the Overseas Chinese, or other descendant group an appropriate

⁷⁸ By the term "archaeological site" is intended here to minimally include any archaeological deposit, feature, burial, or evidence of burial.

representative⁷⁹ of the descendant group and OCII or its designated representative shall be contacted. The representative of the descendant group shall be given the opportunity to monitor archaeological field investigations of the site and to consult with OCII or its designated representative regarding appropriate archaeological treatment of the site, of recovered data from the site, and, if applicable, any interpretative treatment of the associated archaeological site. A copy of the Final Archaeological Resources Report shall be provided to the representative of the descendant group.

Archaeological Testing Program. The archaeological consultant shall prepare and submit to OCII or its designated representative for review and approval an archaeological testing plan (ATP). The archaeological testing program shall be conducted in accordance with the approved ATP. The ATP shall identify the property types of the expected archaeological resource(s) that potentially could be adversely affected by the proposed project, the testing method to be used, and the locations recommended for testing. The purpose of the archaeological testing program will be to determine to the extent possible the presence or absence of archaeological resources and to identify and to evaluate whether any archaeological resource encountered on the site constitutes an historical resource under CEQA.

At the completion of the archaeological testing program, the archaeological consultant shall submit a written report of the findings to OCII or its designated representative. If based on the archaeological testing program the archaeological consultant finds that significant archaeological resources may be present, OCII or its designated representative in consultation with the archaeological consultant shall determine if additional measures are warranted. Additional measures that may be undertaken include additional archaeological testing, archaeological monitoring, and/or an archaeological data recovery program. No archaeological data recovery shall be undertaken without the prior approval of OCII or its designated representative. If OCII or its designated representative determines that a significant archaeological resource is present and that the resource could be adversely affected by the proposed project, at the discretion of the project sponsor either:

- A. The proposed project shall be re-designed so as to avoid any adverse effect on the significant archaeological resource; or
- B. A data recovery program shall be implemented, unless OCII or its designated representative determines that the archaeological resource is of greater interpretive than research significance and that interpretive use of the resource is feasible.

Archaeological Monitoring Program. If OCII or its designated representative in consultation with the archaeological consultant determines that an archaeological monitoring program shall be implemented the archaeological monitoring program shall minimally include the following provisions:

⁷⁹ An "appropriate representative" of the descendant group is here defined to mean, in the case of Native Americans, any individual listed in the current Native American Contact List for the City and County of San Francisco maintained by the California Native American Heritage Commission and in the case of the Overseas Chinese, the Chinese Historical Society of America. An appropriate representative of other descendant groups should be determined in consultation with the Department archaeologist.

- The archaeological consultant, project sponsor, and OCII or its designated representative shall meet and consult on the scope of the AMP reasonably prior to any project-related soils disturbing activities commencing. OCII or its designated representative in consultation with the archaeological consultant shall determine what project activities shall be archaeologically monitored. In most cases, any soils- disturbing activities, such as demolition, foundation removal, excavation, grading, utilities installation, foundation work, driving of piles (foundation, shoring, etc.), site remediation, etc., shall require archaeological monitoring because of the risk these activities pose to potential archaeological resources and to their depositional context;
- The archeological consultant shall advise all project contractors to be on the alert for evidence of the presence of the expected resource(s), of how to identify the evidence of the expected resource(s), and of the appropriate protocol in the event of apparent discovery of an archaeological resource;
- The archaeological monitor(s) shall be present on the project site according to a schedule agreed upon by the archaeological consultant and OCII or its designated representative until OCII or its designated representative has, in consultation with project archaeological consultant, determined that project construction activities could have no effects on significant archaeological deposits;
- The archaeological monitor shall record and be authorized to collect soil samples and artifactual/ecofactual material as warranted for analysis;
- If an intact archaeological deposit is encountered, all soils-disturbing activities in the vicinity of the deposit shall cease. The archaeological monitor shall be empowered to temporarily redirect demolition/excavation/pile driving/ construction activities and equipment until the deposit is evaluated. If in the case of pile driving activity (foundation, shoring, etc.), the archaeological monitor has cause to believe that the pile driving activity may affect an archaeological resource, the pile driving activity shall be terminated until an appropriate evaluation of the resource has been made in consultation with OCII or its designated representative. The archaeological consultant shall immediately notify the OCII or its designated representative of the encountered archaeological deposit. The archaeological consultant shall make a reasonable effort to assess the identity, integrity, and significance of the encountered archaeological deposit, and present the findings of this assessment to OCII or its designated representative.

Whether or not significant archaeological resources are encountered, the archaeological consultant shall submit a written report of the findings of the monitoring program to the OCII or its designated representative.

Archaeological Data Recovery Program. The archaeological data recovery program shall be conducted in accord with an archaeological data recovery plan (ADRP). The archaeological consultant, project sponsor, and OCII or its designated representative shall meet and consult on the scope of the ADRP prior to preparation of a draft ADRP. The archaeological consultant shall submit a draft ADRP to OCII or its designated representative. The ADRP shall identify how the proposed data recovery program will preserve the significant information the archaeological resource is expected to contain. That is, the ADRP will identify what scientific/historical research questions are applicable to the expected resource, what data classes the resource is expected to possess, and how the expected data classes would address the applicable research questions. Data recovery, in general, should be limited to the portions of the historical property that could be adversely affected

by the proposed project. Destructive data recovery methods shall not be applied to portions of the archaeological resources if nondestructive methods are practical.

The scope of the ADRP shall include the following elements:

- *Field Methods and Procedures.* Descriptions of proposed field strategies, procedures, and operations.
- *Cataloguing and Laboratory Analysis.* Description of selected cataloguing system and artifact analysis procedures.
- *Discard and Deaccession Policy.* Description of and rationale for field and post-field discard and deaccession policies.
- *Interpretive Program.* Consideration of an on-site/off-site public interpretive program during the course of the archaeological data recovery program.
- *Security Measures.* Recommended security measures to protect the archaeological resource from vandalism, looting, and non-intentionally damaging activities.
- *Final Report.* Description of proposed report format and distribution of results.
- *Curation.* Description of the procedures and recommendations for the curation of any recovered data having potential research value, identification of appropriate curation facilities, and a summary of the accession policies of the curation facilities.

Human Remains and Associated or Unassociated Funerary Objects. The treatment of human remains and of associated or unassociated funerary objects discovered during any soils disturbing activity shall comply with applicable State and Federal laws. This shall include immediate notification of the Coroner of the City and County of San Francisco and in the event of the Coroner's determination that the human remains are Native American remains, notification of the California State Native American Heritage Commission (NAHC) who shall appoint a Most Likely Descendant (MLD) (Pub. Res. Code Sec. 5097.98). The archaeological consultant, project sponsor, OCII or its designated representative, and MLD shall make all reasonable efforts to develop an agreement for the treatment of, with appropriate dignity, human remains and associated or unassociated funerary objects (CEQA Guidelines. Sec. 15064.5(d)). The agreement should take into consideration the appropriate excavation, removal, recordation, analysis, custodianship, curation, and final disposition of the human remains and associated or unassociated funerary objects.

Final Archaeological Resources Report. The archeological consultant shall submit a Draft Final Archaeological Resources Report (FARR) to OCII or its designated representative that evaluates the historical significance of any discovered archaeological resource and describes the archaeological and historical research methods employed in the archaeological testing/monitoring/data recovery program(s) undertaken. Information that may put at risk any archaeological resource shall be provided in a separate removable insert within the final report.

Once approved by OCII or its designated representative, copies of the FARR shall be distributed as follows: California Archaeological Site Survey Northwest Information Center (NWIC) shall receive one (1) copy and OCII or its designated representative shall receive a copy of the transmittal of the FARR to the NWIC. As requested by OCII, the Environmental Planning division of the Planning Department shall receive one bound, one unbound and one unlocked, searchable PDF copy on CD

of the FARR along with copies of any formal site recordation forms (CA DPR 523 series) and/or documentation for nomination to the National Register of Historic Places/California Register of Historical Resources. In instances of high public interest in or the high interpretive value of the resource, OCII or its designated representative may require a different final report content, format, and distribution than that presented above.

Mitigation Measure M-CP-2b: Accidental Discovery of Archaeological Resources (Implementing FSEIR Mitigation D.6)

The following mitigation measure is required to avoid any potential adverse effect from the proposed project on accidentally discovered buried or submerged historical resources as defined in *CEQA Guidelines* Section 15064.5(a)(c). The project sponsor shall distribute the Planning Department archaeological resource "ALERT" sheet to the project prime contractor; to any project subcontractor (including demolition, excavation, grading, foundation, pile driving, etc. firms); or utilities firm involved in soils disturbing activities within the project site. Prior to any soils disturbing activities being undertaken each contractor is responsible for ensuring that the "ALERT" sheet is circulated to all field personnel, including machine operators, field crew, pile drivers, supervisory personnel, etc. The project sponsor shall provide OCII officer or its designated representative with a signed affidavit from the responsible parties (prime contractor, subcontractor(s), and utilities firm) confirming that all field personnel have received copies of the Alert Sheet.

Should any indication of an archaeological resource be encountered during any soils disturbing activity of the project, the project Head Foreman and/or project sponsor shall immediately notify OCII officer or its designated representative and shall immediately suspend any soils disturbing activities in the vicinity of the discovery until OCII officer or its designated representative has determined what additional measures should be undertaken.

If OCII officer or its designated representative determines that an archaeological resource may be present within the project site, the project sponsor shall retain the services of an archaeological consultant from the pool of qualified archaeological consultants maintained by the Planning Department archaeologist. The archaeological consultant shall advise OCII officer or its designated representative as to whether the discovery is an archaeological resource, retains sufficient integrity, and is of potential scientific/historical/cultural significance. If an archaeological resource is present, the archaeological consultant shall identify and evaluate the archaeological resource. The archaeological consultant shall make a recommendation as to what action, if any, is warranted. Based on this information, OCII officer or its designated representative may require, if warranted, specific additional measures to be implemented by the project sponsor.

Measures might include: preservation in situ of the archaeological resource; an archaeological monitoring program; or an archaeological testing program. If an archaeological monitoring program or archaeological testing program is required, it shall be consistent with the Environmental Planning (EP) division guidelines for such programs. OCII officer or its designated representative may also require that the project sponsor immediately implement a site security program if the archaeological resource is at risk from vandalism, looting, or other damaging actions.

The project archaeological consultant shall submit a Final Archaeological Resources Report (FARR) to OCII officer or its designated representative that evaluates the historical significance of any

discovered archaeological resource and describing the archaeological and historical research methods employed in the archaeological monitoring/data recovery program(s) undertaken. Information that may put at risk any archaeological resource shall be provided in a separate removable insert within the final report.

Copies of the Draft FARR shall be sent to OCII officer or its designated representative for review and approval. Once approved by OCII officer or its designated representative, copies of the FARR shall be distributed as follows: California Archaeological Site Survey Northwest Information Center (NWIC) shall receive one (1) copy and OCII officer or its designated representative shall receive a copy of the transmittal of the FARR to the NWIC. OCII and the Environmental Planning division of the Planning Department shall each receive one bound copy, one unbound copy and one unlocked, searchable PDF copy on CD three copies of the FARR along with copies of any formal site recordation forms (CA DPR 523 series) and/or documentation for nomination to the National Register of Historic Places/California Register of Historical Resources. In instances of high public interest or interpretive value, OCII officer or its designated representative may require a different final report content, format, and distribution than that presented above.

Mitigation Measure M-BI-4a: Preconstruction Surveys for Nesting Birds

To the extent practicable, vegetation removal and grading of the site in advance of new site construction shall be performed between September 1 and January 31 in order to avoid breeding and nesting season for birds. If these activities cannot be performed during this period, a preconstruction survey of onsite vegetation for nesting birds shall be conducted by a qualified biologist.

In coordination with the OCII or its designated representative, pre-construction surveys of onsite vegetation shall be performed during bird breeding season (February 1 – August 31) no more than 14 days prior to vegetation removal, grading, or initiation of construction in order to locate any active passerine nests within 250 feet of the project site and any active raptor nests within 500 feet of the project site. Surveys shall be performed in accessible areas within 500 feet of the project site and include suitable habitat within line of sight as access is available. If active nests are found on either the project site or within the 500-foot survey buffer surrounding the project site, no-work buffer zones shall be established around the nests. Buffer distances will consider physical and visual barriers between the active nest and project activities, existing noise sources and disturbance, as well as sensitivity of the bird species to disturbance. Modification of standard buffer distances, 250 feet for active passerine nests and 500 feet for active raptor nests, will be determined by a qualified biologist in consultation with the California Department of Fish and Wildlife (CDFW). No vegetation removal or ground-disturbing activities including grading or new construction shall occur within a buffer zone until young have fledged or the nest is otherwise abandoned as determined by the qualified biologist.

If construction work during the nesting season stops for 14 days or more and then resumes, then nesting bird surveys shall be repeated, to ensure that no new birds have begun nesting in the area.

Mitigation Measure M-BI-4b: Bird Safe Building Practices

The project sponsor shall design and implement the project consistent with the San Francisco *Standards for Bird-Safe Buildings* and Planning Code Section 139, as approved by OCII. OCII shall consult with the Planning Department and the Zoning Administrator concerning project consistency with Planning Code Section 139.

Mitigation Measure M-HZ-1a. Guidelines for Handling Biohazardous Materials

Mission Bay FSEIR Mitigation Measure I.1. Require businesses that handle biohazardous materials and do not receive federal funding to certify that they follow the guidelines published by the National Research Council and the United States Department of Health and Human Services Public Health Service, National Institutes of Health, and Centers for Disease Control, as set forth in Biosafety in Microbiological and Biomedical Laboratories, Guidelines for Research Involving Recombinant DNA Molecules (NIH Guidelines), and Guide for the Care and Use of Laboratory Animals, or their successors, as applicable.

Mission Bay FSEIR Mitigation Measure I.2. Require businesses handling biohazardous materials to certify that they use high efficiency particulate air (HEPA) filters or substantially equivalent devices on all exhaust from Biosafety Level 3 laboratories unless they demonstrate that exhaust from their Biosafety Level 3 laboratories would not pose substantial health or safety hazards to the public or the environment. Require such businesses to certify that they inspect or monitor the filters regularly to ensure proper functioning.

Mission Bay FSEIR Mitigation Measure I.3. Require businesses handling biohazardous materials to certify that they do not handle or use biohazardous materials requiring Biosafety Level 4 containment (i.e., dangerous or exotic materials that pose high risks of life-threatening diseases or aerosol-transmitted infections, or unknown risks of transmission) in the Project Area.

Mitigation Measure M-HZ-1b: Geologic Investigation and Dust Mitigation Plan for Naturally Occurring Asbestos

The project sponsor shall conduct a geologic investigation in accordance with the guidelines of the California Geologic Survey⁸⁰ to determine the naturally occurring asbestos content of fill materials to be excavated at the project site. If the investigation determines that the naturally occurring asbestos content of the fill materials is 0.25 percent or greater, the project sponsor or its construction contractor shall submit the appropriate notification forms and prepare an asbestos dust mitigation plan in accordance with the Asbestos ATCM. The plan shall specify measures that will be taken to ensure that no visible dust crosses the property boundary during construction. The plan must specify the following measures:

- Prevent and control visible track-out from the property
- Ensure adequate wetting or covering of active storage piles
- Control disturbed surface areas and storage piles that would remain inactive for 7 days
- Control traffic on on-site unpaved roads, parking lots, and staging areas, including a maximum vehicle speed of 15 miles per hour
- Control earthmoving activities
- Control offsite transport of dust emissions that contain naturally-occurring asbestos-containing materials

⁸⁰ California Geologic Survey, 2002. *Guidelines for Geologic Investigations of Naturally Occurring Asbestos in California. Special Publication 124.*

- Stabilize disturbed areas following construction

Mitigation Measure M-HZ-2: RMP Provisions for Child Care Facilities

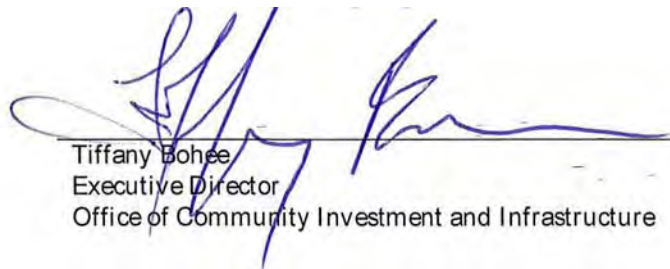

Mission Bay FSEIR Mitigation Measure J.2. Carry out a site-specific risk evaluation for each site in a non-residential area proposed to be used for a public school or child care facility; submit to RWQCB for review and approval. If cancer risks exceed 1×10^{-5} and/or noncancer risk exceeds a Hazard Index of 1, carry out remediation designed to reduce risks to meet these standards or select another site that is shown to meet these standards.

C. DETERMINATION

On the basis of this Initial Study:

- I find that the proposed project COULD NOT have a new or substantially more severe significant effect on the environment than identified in the Mission Bay FSEIR, and a NEGATIVE DECLARATION will be prepared.
- I find that although the proposed project could have a new or substantially more severe significant effect on the environment than identified in the Mission Bay FSEIR, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- I find that the proposed project MAY have a new or substantially more severe significant effect on the environment than identified in the Mission Bay FSEIR, and an ENVIRONMENTAL IMPACT REPORT is required.
- I find that the proposed project MAY have a “potentially new or substantially more severe significant impact” or “potentially new or substantially more severe significant unless mitigated” impact on the environment than identified in the Mission Bay FSEIR, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. A SUBSEQUENT ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- I find that although the proposed project could have a new or substantially more severe significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, no further environmental documentation is required.

APPENDIX A

Special Status Species Tables

TABLE 1
SPECIAL-STATUS PLANT SPECIES REPORTED OR WITH POTENTIAL TO OCCUR NEAR THE
EVENT CENTER AND MIXED-USE DEVELOPMENT AREA AT MISSION BAY BLOCKS 29-32

Common Name Scientific Name	Federal Status	State Status	Calif. Rare Plant Rank	Habitat Description / Blooming Period	Potential to Occur in the Action Area
Species Listed or Proposed for Listing					
Presidio Manzanita <i>Arctostaphylos montana</i> ssp. <i>ravenii</i>	FE	CE	1B.1	Open, rocky, serpentine slopes in chaparral, coastal scrub, and coastal prairie. February – March	Absent. No suitable habitat present.
Marsh sandwort <i>Arenaria paludicola</i>	FE	CE	1B.1	Freshwater or brackish marshes and swamps. May – August	Low. No suitable habitat present.
Presidio clarkia <i>Clarkia franciscana</i>	FE	CE	1B.1	Serpentine outcrops in coastal scrub, and valley and foothill grassland. May – July	Low. No suitable habitat present.
Beach layia <i>Layia carnosa</i>	FE	CE	1B.1	Sand dunes. March – July	Low. No suitable habitat present.
San Francisco lessingia <i>Lessingia germanorum</i>	FE	CE	1B.1	Coastal scrub, sandy soils free of competing species. July – November	Low. No suitable habitat present.
White rayed pentachaeta <i>Pentachaeta bellidiflora</i>	FE	CE	1B.1	Open, dry, rocky slopes and grassy areas, usually on serpentine. March – May	Low. No suitable habitat present.
Marin western flax <i>Hesperolinon congestum</i>	FT	CT	1B.1	Chaparral and grassland, usually on serpentine barrens. April – July	Low. No suitable habitat present.
California seablite <i>Suaeda californica</i>	FE	--	1B.1	Coastal Salt Marsh, wetland-riaprian July - October	Low. Documented occurrences south of the proposed project at Pier 94 and India Basin. Suitable habitat not present within the project site.
Franciscan manzanita <i>Arctostaphylos franciscana</i>	FE	--	1B.1	Open, rocky, serpentine outcrops in chaparral. February – April	Absent. No suitable habitat present. This species was believed to be extinct in the wild (although still extant through cultivation), but was rediscovered in Presidio National Park in late 2009.
Robust spineflower <i>Chorizanthe robusta</i> var. <i>robusta</i>	FE	--	1B.1	Sandy or gravelly coastal dunes, coastal scrub, cismontane woodland and maritime chaparral. April – September	Low. No suitable habitat present.
Showy rancheria clover <i>Trifolium amoenum</i>	FE	--	1B.1	Valley grassland, wetland riparian April - June	Low. No suitable habitat present. No local records documented in San Francisco.

TABLE 1 (Continued)
SPECIAL-STATUS PLANT SPECIES REPORTED OR WITH POTENTIAL TO OCCUR NEAR THE
EVENT CENTER AND MIXED-USE DEVELOPMENT AREA AT MISSION BAY BLOCKS 29-32

Common Name Scientific Name	Federal Status	State Status	Calif. Rare Plant Rank	Habitat Description / Blooming Period	Potential to Occur in the Action Area
Species Listed or Proposed for Listing (cont.)					
San Bruno Mountain manzanita <i>Arctostaphylos imbricata</i>	--	CE	1B.1	Chaparral and coastal scrub, usually on sandstone outcrops. February – May	Absent. No suitable habitat present.
Pacific manzanita <i>Arctostaphylos pacifica</i>	--	CE	1B.2	Coastal scrub and chaparral. February – April	Absent. No suitable habitat present.
San Francisco popcorn- flower <i>Plagiobothrys diffusus</i>	--	CE	1B.1	Coastal prairie, and valley and foothill grasslands. March – June	Low. No suitable habitat present.
Federal Species of Concern or State Species of Special Concern					
Adobe sanicle <i>Sanicula maritima</i>	--	Rare	1B.1	Moist clay or ultramafic soil in chaparral, coastal prairie, meadows, seeps, and valley and foothill grassland. February – May	Low. No suitable habitat present.
Hairless popcorn-flower <i>Plagiobothrys glaber</i>	--	--	1A	Coastal salt marshes and alkaline meadows. March – May	Low. No suitable habitat present.
coast lilly <i>Lilium maritimum</i>	--	--	1B.1	Coastal Prairie, mixed evergreen forest, northern coastal scrub, closed-cone pine forest, north coastal coniferous forest, wetland-riparian May – August	Low. No suitable habitat present.
Northern curly-leaved mondarella <i>Mondarella sinuata</i> ssp. <i>Nigrescens</i>	--	--	1B.2	Coastal strand, chaparral May - July	Low. No suitable habitat present.
Blue coast gilia <i>Gilia capitata</i> spp. <i>chamissonis</i>	--	--	1B.1	Coastal dunes and scrub. April – July	Low. No suitable habitat present. Extant population is present within the Presidio of San Francisco.
Kellogg's horkelia <i>Horkelia cuneata</i> ssp. <i>sericea</i>	--	--	1B.1	Coastal scrub, dunes, and openings of closed-cone coniferous forests. February – July	Low. No suitable habitat present.
Rose leptosiphon <i>Leptosiphon rosaceus</i>	--	--	1B.1	Coastal bluff scrub. April – July	Low. No suitable habitat present.
Fragrant fritillary <i>Fritillaria liliacea</i>	--	--	1B.2	On clay, often serpentine derived soils in coastal scrub, grassland, and coastal prairie. February – April	Low. No suitable habitat present. Extant population located at Twin Peaks.

TABLE 1 (Continued)
SPECIAL-STATUS PLANT SPECIES REPORTED OR WITH POTENTIAL TO OCCUR NEAR THE
EVENT CENTER AND MIXED-USE DEVELOPMENT AREA AT MISSION BAY BLOCKS 29-32

Common Name Scientific Name	Federal Status	State Status	Calif. Rare Plant Rank	Habitat Description / Blooming Period	Potential to Occur in the Action Area
Federal Species of Concern or State Species of Special Concern (cont.)					
Bent-flowered fiddleneck <i>Amsinckia lunaris</i>	--	--	1B.2	Coastal bluff scrub, cismontane woodland, and valley and foothill grassland. March – June	Low. No suitable habitat present.
Montara manzanita <i>Arctostaphylos montaraensis</i>	--	--	1B.2	Slopes and ridges in chaparral and coastal scrub. January – March	Absent. No suitable habitat present.
Alkali milk-vetch <i>Astragalus tener</i> var. <i>tener</i>	--	--	1B.2	Alkali flats, flooded grassland, playas and vernal pools. March – June	Low. No suitable habitat present; species presumed extirpated in San Francisco.
Pappose tarplant <i>Centromadia parryi</i> ssp. <i>parryi</i>	--	--	1B.2	Chaparral, coastal prairie, meadows, seeps, coastal salt marshes and swamps, and vernal mesic, often alkaline, valley and foothill grasslands. May – November	Low. No suitable habitat present.
Franciscan thistle <i>Cirsium andrewsii</i>	--	--	1B.2	Coastal bluff scrub, coastal prairie, coastal mesic scrub, and broadleaf upland forest; sometimes on serpentine. March – July	Low. No suitable habitat present.
San Francisco Bay spineflower <i>Chorizanthe cuspidata</i> var. <i>cuspidata</i>	--	--	1B.2	Coastal scrub, dunes and grassland. April – July	Low. No suitable habitat present.
Point Reyes bird's-beak <i>Chloropyron maritimum</i> ssp. <i>palustre</i>	--	--	1B.2	Coastal salt marshes and swamps. June – October	Low. No suitable habitat present.
Compact cobwebby thistle <i>Cirsium occidentale</i> var. <i>compactum</i>	--	--	1B.2	Coastal scrub, grassland, and dunes. April – June	Low. No suitable habitat present.
Round-headed Chinese-houses <i>Collinsia corymbosa</i>	--	--	1B.2	Coastal dunes and coastal prairie. April – June	Low. No suitable habitat present; species has not been seen in San Francisco for more than 100 years.
San Francisco collinsia <i>Collinsia multicolor</i>	--	--	1B.2	On humus-covered soil derived from mudstone in closed-cone coniferous forest, coastal scrub. March – May	Low. No suitable habitat present.
Dark-eyed gilia <i>Gilia millefoliata</i>	--	--	1B.2	Coastal dunes. April – July	Low. No suitable habitat present; species potentially extirpated in San Francisco.

TABLE 1 (Continued)
SPECIAL-STATUS PLANT SPECIES REPORTED OR WITH POTENTIAL TO OCCUR NEAR THE
EVENT CENTER AND MIXED-USE DEVELOPMENT AREA AT MISSION BAY BLOCKS 29-32

Common Name Scientific Name	Federal Status	State Status	Calif. Rare Plant Rank	Habitat Description / Blooming Period	Potential to Occur in the Action Area
Federal Species of Concern or State Species of Special Concern (cont.)					
Diablo helianthella <i>Helianthella castanea</i>	--	--	1B.2	On rocky soils in broadleaf upland forest, cismontane woodland, coastal scrub, riparian woodland, and valley and foothill grassland. March – June	Absent. No suitable habitat present.
White seaside tarplant <i>Hemizonia congesta</i> ssp. <i>congesta</i>	--	--	1B.2	Grassy valleys and hills, often on fallow fields in coastal scrub. April – November	Low. No suitable habitat present.
Short-leaved evax <i>Hesperovax sparsiflora</i> var. <i>brevifolia</i>	--	--	1B.2	Sandy bluffs and flats in coastal scrub and coastal dunes. March – June	Low. No suitable habitat present.
Arcuate bush mallow <i>Malacothamnus arcuatus</i>	--	--	1B.2	Gravelly alluvium in chaparral and cismontane woodland. April – September	Absent. No suitable habitat present.
Marsh microseris <i>Microseris paludosa</i>	--	--	1B.2	Closed-cone coniferous forest, cismontane woodland, coastal scrub, and valley and foothill grassland. August – June	Low. No suitable habitat present.
Choris's popcorn-flower <i>Plagiobothrys chorisianus</i> var. <i>chorisianus</i>	--	--	1B.2	Mesic sites in chaparral, coastal scrub, and coastal prairie. March – June	Low. No suitable habitat present.
San Francisco champion <i>Silene verecunda</i> ssp. <i>verecunda</i>	--	--	1B.2	Mudstone, shale, or serpentine substrates in coastal scrub, coastal prairie, chaparral and valley and foothill grassland. March – June	Low. No suitable habitat present.
Santa Cruz microseris <i>Stebbinsoseris decipiens</i>	--	--	1B.2	On sandstone, shale or serpentine derived seaward facing slopes in broadleaf upland forest, closed-cone coniferous forest, chaparral, coastal prairie, and coastal scrub. April – May	Low. No suitable habitat present.
Coastal triquetrella <i>Triquetrella californica</i>	--	--	1B.2	On shaded soil, rocks sand or gravel in dry or moist conditions or in coastal bluff and coastal scrub.	Low. No suitable habitat present.
San Francisco owl's clover <i>Triphysaria floribunda</i>	--	--	1B.2	Grasslands. April – June	Low. No suitable habitat present.
Bristly sedge <i>Carex comosa</i>	--	--	2B.1	Lake margins, marshes, swamps, coastal prairie, and valley and foothill grasslands. May – September	Absent. No suitable habitat present.

TABLE 1 (Continued)
SPECIAL-STATUS PLANT SPECIES REPORTED OR WITH POTENTIAL TO OCCUR NEAR THE
EVENT CENTER AND MIXED-USE DEVELOPMENT AREA AT MISSION BAY BLOCKS 29-32

Common Name Scientific Name	Federal Status	State Status	Calif. Rare Plant Rank	Habitat Description / Blooming Period	Potential to Occur in the Action Area
Federal Species of Concern or State Species of Special Concern (cont.)					
Oregon polemonium <i>Polemonium carneum</i>	--	--	2B.2	Coastal prairie, coastal scrub, lower montane coniferous forest. April – September	Low. No suitable habitat present.
San Francisco gumplant <i>Grindelia hirsutula</i> var. <i>maritima</i>	--	--	3.2	On sandy or serpentine slopes of sea bluffs in coastal scrub, or valley and foothill grasslands. June – September	Absent. No suitable habitat present.

NOTES:

The "Potential for Effect" category is defined as follows:

High = Species is expected to occur and habitat meets species requirements.

Moderate = Habitat is only marginally suitable or is suitable but not within species geographic range.

Low = Habitat does not meet species requirements as currently understood in the scientific community.

STATUS CODES:

Federal:

FE = Listed as "endangered" under the federal Endangered Species Act

FT = Listed as "threatened" under the federal Endangered Species Act

FSC = NOAA Fisheries designated "species of concern"

FPD = Proposed delisted

FD = Delisted

State:

CE = Listed as "endangered" under the California Endangered Species Act

CT = Listed as "threatened" under the California Endangered Species Act

CSC = California Department of Fish and Wildlife designated "species of special concern"

CFP = California Department of Fish and Wildlife designated "fully protected"

SC = California Department of Fish and Wildlife designated "candidate threatened"

WL = California Department of Fish and Wildlife designated "watch list"

3503.5 = Eggs, Nests, and Nestlings Protected under section 3503.5 of the California Department of Fish and Game Code

* = California special animal

California Rare Plant Rank:

List 1A = Plants presumed extirpated in California and either rare or extinct elsewhere

List 1B = Plants rare, threatened, or endangered in California and elsewhere

List 2A = Plants presumed extirpated in California, but more common elsewhere

List 2B = Plants rare, threatened, or endangered in California, but more common elsewhere

List 3 = Plants about which we need more information--a review list

List 4 = Plants of limited distribution--a watch list

TABLE 2
SPECIAL-STATUS ANIMAL SPECIES REPORTED OR WITH POTENTIAL TO OCCUR NEAR THE
EVENT CENTER AND MIXED-USE DEVELOPMENT AREA AT MISSION BAY BLOCKS 29-32

Common Name Scientific Name	Federal Status	State Status	Habitat Description	Potential to Occur in the Action Area
Invertebrates				
San Bruno elfin butterfly <i>Callophrys mossii bayensis</i>	FE	--	Coastal scrub on rocky outcrops with broadleaf stonecrop (<i>Sedum spathulifolium</i>)	Low. No suitable habitat present. Three known populations at San Bruno Mountain, Montara, and Pacifica.
Bay checkerspot butterfly <i>Euphydryas editha bayensis</i>	FT	--	Serpentine grasslands.	Low. No suitable habitat present.
Mission blue butterfly <i>Plebejus icarioides missionensis</i>	FE	--	Grassland with <i>Lupinus albifrons</i> , <i>L. Formosa</i> , and <i>L. varicolor</i> .	Low. Closest suitable habitat present at Twin Peaks. Species unlikely to occur at the project site.
Callippe silverspot butterfly <i>Speyeria callippe callippe</i>	FE	--	Found in native grasslands with <i>Viola pedunculata</i> as larval food plant.	Low. No suitable habitat present.
Monarch butterfly <i>Danaus plexippus</i>	--	*	Eucalyptus groves (wintering sites).	Low. No suitable habitat present though may occur on a transient basis. Several records of this species wintering in eucalyptus groves within San Francisco including Golden Gate Park, the Presidion, Fort Mason, and Telegraph Hill.
Tomales isopod <i>Caecuditea tomalensis</i>	--	--	Still-to slow-moving water in vegetated ponds, preferably spring-fed.	Low. No suitable habitat present.
Reptiles and Amphibians				
Western pond turtle <i>Emys marmorata</i>	--	CSC	Ponds, marshes, rivers, streams, and irrigation ditches with aquatic vegetation. Requires basking sites and suitable upland habitat for egg-laying. Nest sites most often characterized as having gentle slopes (<15%) with little vegetation or sandy banks.	Low. No suitable habitat present.
San Francisco garter snake <i>Thamnophis sirtalis tetrataenia</i>	FE	SE	Densely vegetated ponds near open hillsides with abundant small mammal burrows.	Absent. Species is considered likely extirpated from San Francisco.
California red-legged frog <i>Rana draytonii</i>	FT	CSC	Freshwater ponds and slow streams with emergent vegetation for egg attachment.	Low. No suitable habitat present.
Birds				
California clapper rail <i>Rallus longirostris obsoletus</i>	FE	CE	Salt marsh wetlands along the San Francisco Bay.	Low. No suitable habitat present.
Bank swallow <i>Riparia riparia</i> (nesting)	--	CT	Vertical banks and cliffs with sandy soil, near water. Nests in holes dug in cliffs and river banks.	Low. No suitable habitat present.
Yellow warbler <i>Dendroica petechia brewsteri</i>	--	CSC	Nests in dense riparian cover and montane chaparral. Breeding distribution includes the coast ranges and western slopes of the Sierra Nevada. Rare to uncommon in lowland areas.	Low. No suitable riparian habitat present.

TABLE 2 (Continued)
SPECIAL-STATUS ANIMAL SPECIES REPORTED OR WITH POTENTIAL TO OCCUR NEAR THE
EVENT CENTER AND MIXED-USE DEVELOPMENT AREA AT MISSION BAY BLOCKS 29-32

Common Name <i>Scientific Name</i>	Federal Status	State Status	Habitat Description	Potential to Occur in the Action Area
Birds (cont.)				
California black rail <i>Laterallus jamaicensis coturniculus</i>	--	CT	Salt and brackish marshes; also in freshwater marshes at low elevations.	Low. No suitable habitat present.
Salt marsh common yellowthroat <i>Geothlypis trichas sinuosa</i>	--	CSC	Forages in various marsh, riparian and upland habitats. Nests on or near the ground in concealed locations.	Low. No suitable riparian habitat present.
Alameda song sparrow <i>Melospiza melodia pusillula</i>	--	CSC	Salt marshes of eastern and south San Francisco Bay.	Low. No suitable habitat present.
San Pablo song sparrow <i>Melospiza melodia samuelis</i>	--	CSC	Salt marshes of eastern and north San Francisco Bay.	Low. No suitable habitat present.
Peregrine falcon <i>Falco peregrinus</i>	FD	FP	Woodlands, coastal habitats, riparian areas, coastal and inland waters, human made structures that may be used as nest or temporary perch sites.	Low. May forage over the project area though proposed project site does not provide nesting habitat.
Double-crested cormorant <i>Phalacrocorax auritus</i>	--	WL, 3503.5	Coastal areas and inland lakes in fresh, saline, and estuarine waters.	Low. No suitable nesting habitat present at the proposed project site though colonies are known to nest on the Bay Bridge. Species may occur in adjacent Bay waters or over the project site on a transient basis.
Cooper's hawk <i>Accipiter cooperii</i>	--	3503.5	Nests in riparian areas and oak woodlands, forages at woodland edges.	Low. No suitable habitat present.
Sharp-shinned hawk <i>Accipiter striatus</i>	--	3503.5	Nests in riparian areas and oak woodlands, forages in open areas	Low. No suitable habitat present.
Great horned owl <i>Bubo virginianus</i>	--	3503.5	Riparian, coniferous, chaparral and desert habitats.	Low. No suitable habitat present.
Red-tailed hawk <i>Buteo jamaicensis</i>	--	3503.5	Found in nearly all habitats and elevations.	Low. No suitable habitat present. May occur over the project on a transient basis.
Red-shouldered hawk <i>Buteo lineatus</i>	--	3503.5	Riparian woodlands with swamps and emergent wetlands.	Low. No suitable habitat present.
American kestrel <i>Falco sparverius</i>	--	3503.5	Frequents generally open grasslands, pastures, and fields; primarily a cavity nester.	Low. No suitable habitat present. May occur over the project on a transient basis.
Osprey <i>Pandion haliaetus</i>	--	3503.5	Habitat varies greatly and usually includes adequate supply of accessible fish, shallow waters, open and elevated nest sites (10-60 feet in height), and artificial structures such as towers. Builds large platform stick nests near or in open waters such as lakes, estuaries, bays, reservoirs, and within the surf zone.	Low. No suitable habitat is present. May forage in adjacent waters. Project site does not provide suitable nesting habitat.
Great blue heron <i>Ardea herodias</i>	--	3503.5	Shallow estuaries and fresh and saline emergent wetlands.	Low. May forage in standing water of the onsite basin.
American goldfinch <i>Carduelis tristis</i>	--	3503.5	Cismontane foothills; riparian and cropland habitats.	Present. Suitable habitat is present.

TABLE 2 (Continued)
SPECIAL-STATUS ANIMAL SPECIES REPORTED OR WITH POTENTIAL TO OCCUR NEAR THE
EVENT CENTER AND MIXED-USE DEVELOPMENT AREA AT MISSION BAY BLOCKS 29-32

Common Name <i>Scientific Name</i>	Federal Status	State Status	Habitat Description	Potential to Occur in the Action Area
Birds (cont.)				
Barn swallow <i>Hirundo rustica</i>	--	3503.5	Open areas from coastal grassland and shrubland to mixed coniferous forests.	Moderate. Suitable habitat is present.
Mammals				
Western red bat <i>Lasiurus blossevillii</i>	--	CSC	Roosts primarily in trees, 2-40 feet above ground, from sea level up through mixed conifer forests. Prefers habitat edges and mosaics with trees that are protected from above and open below with open areas for foraging.	Low. No suitable habitat is present.
Pallid bat <i>Antrozous pallidus</i>	--	CSC	Prefers caves, crevices, hollow trees, or buildings in areas adjacent to open space for foraging. Associated with lower elevations in California.	Low. No suitable habitat is present.
Townsend's big-eared bat <i>Corynorhinus townsendii</i>	--	CSC SC	Throughout California in a wide variety of habitats. Most common in mesic sites. Roosts in the open, hanging from walls and ceilings of rocky areas with caves or tunnels. Roosting sites limited. Extremely sensitive to human disturbance.	Low. No suitable habitat is present.
American badger <i>Taxidea taxus</i>	--	CSC	Open grasslands with loose, friable soils.	Low. No suitable habitat present.
Point Reyes jumping mouse <i>Zapus trinotatus orarius</i>	--	CSC	Upland areas of bunch grass in marshes in Point Reyes.	Low. Project site is south of the known range for this species.

NOTES:

The "Potential for Effect" category is defined as follows:

TABLE OF CONTENTS

EXECUTIVE SUMMARY	i
CHAPTER 1. INTRODUCTION	1
1.1 TMP Purpose, Goal, and Objectives	1
1.1.1 Design Objectives	2
1.2 Key Stakeholders.....	3
1.3 Project Context.....	6
1.3.1 Transit Projects	10
1.3.2 Pedestrian and Bicycle Projects	11
1.3.3 Regional Traffic Projects	12
1.3.4 Near-Term Infrastructure Projects	12
1.4 Implementation Strategy	13
1.4.1 Coordination with Agencies and Transit Providers	13
1.5 Document Organization.....	15
CHAPTER 2. PROJECT DESCRIPTION AND EVENT SCENARIOS.....	16
2.1 Project Description.....	16
2.1.1 General.....	16
2.1.2 Proposed Street Cross-Sections	17
2.1.3 Mission Bay TMA Shuttle Program Expansion	20
2.1.4 Bicycle Parking	20
2.1.5 Vehicle Parking.....	21
2.2 Event Scenarios	24
2.2.1 Typical No-Event Day	24
2.2.2 Small Event.....	24
2.2.3 Arena Concert Event	24
2.2.4 Peak Event.....	24
2.2.5 Peak Event Concurrent with Event at AT&T Park	25
2.3 Typical Annual Event Distribution	25
CHAPTER 3. EXISTING CONDITIONS.....	27
3.1 Pedestrian Facilities.....	27
3.2 Transit Network.....	27
3.2.1 Bay Area Rapid Transit (BART, Regional)	27
3.2.2 Ferry Building	28
3.2.3 Caltrain (Regional)	29
3.2.4 San Francisco Muni (Local)	29
3.2.5 Mission Bay TMA Shuttles	30
3.2.6 Temporary Transbay Terminal.....	30
3.3 Bicycle Facilities.....	33
3.4 Street Network	36
3.4.1 Local Access.....	36
3.4.2 Truck Access	38

3.5	Regional Traffic	40
CHAPTER 4.	TRAVEL DEMAND MANAGEMENT	41
4.1	General Transportation Management Strategies	41
4.2	Employee TDM	41
4.2.1	<i>Employee Public Transit Strategies</i>	41
4.2.2	<i>Employee Bicycle Strategies</i>	42
4.2.3	<i>Employee Automobile Reduction Strategies</i>	42
4.2.4	<i>Additional Strategies</i>	42
4.3	Event Center Patron TDM	42
4.3.1	<i>Patron Public Transit Strategies</i>	42
4.3.2	<i>Patron Bicycle Strategies</i>	43
4.3.3	<i>Patron Automobile Reduction Strategies</i>	44
4.4	Special Event Transit Service Plan	44
4.4.1	<i>Service Plan Objectives</i>	44
4.4.2	<i>Service Plan for Peak Event</i>	45
CHAPTER 5.	TRAVEL CHARACTERISTICS OF EVENT CENTER ATTENDEES AND SITE USERS.....	50
5.1	NBA Event Attendance Levels	50
5.2	Event Center Patron Arrivals	51
5.2.1	<i>Trip Origins and Arrival Distribution</i>	51
5.2.2	<i>Pedestrian Arrivals</i>	51
5.2.3	<i>Transit Arrivals</i>	52
5.2.4	<i>Bicycle Arrivals</i>	53
5.2.5	<i>Taxis and Charter Buses</i>	55
5.2.6	<i>Vehicle Arrivals at Event Center</i>	55
5.3	Event Center Patron Departures	58
5.3.1	<i>Trip Departure Distribution</i>	58
5.3.2	<i>Pedestrian Departures</i>	58
5.3.3	<i>Transit Departures</i>	58
5.3.4	<i>Bicycle Departures</i>	59
5.3.5	<i>Taxis and Charter Buses</i>	60
5.3.6	<i>Vehicle Departures from Event Center Garage</i>	60
5.4	Daily Non-Event Arrivals and Departures	61
CHAPTER 6.	CONTROLS BY EVENT SCENARIO	63
6.1	Control Recommendations for No-Event Day Scenario	65
6.2	Controls for Convention Scenario	66
6.2.1	<i>General</i>	66
6.2.2	<i>Pre- and Post-Event Controls</i>	66
6.3	Controls for Arena Concert Scenario	70
6.3.1	<i>General</i>	70
6.3.2	<i>Curb Management</i>	70
6.3.3	<i>Pre-Event Controls</i>	71
6.3.4	<i>Post-Event Controls</i>	73
6.4	Controls for Peak Event Scenario	80
6.4.1	<i>General</i>	80
6.4.2	<i>Curb Management</i>	80
6.4.3	<i>Pre-Event Controls</i>	81

6.4.4	<i>Post-Event Controls</i>	82
6.5	Controls for Peak Event Coinciding with AT&T Park Event Scenario	89
6.5.1	<i>General</i>	89
CHAPTER 7.	FREIGHT LOADING	92
7.1	Freight Access for Event Center Development (Blocks 29-32)	92
CHAPTER 8.	EMERGENCY VEHICLE ACCESS	94
8.1	Emergency Vehicle Access for Event Center	94
8.2	Emergency Vehicle Access for UCSF Hospital	94
CHAPTER 9.	COMMUNICATION	96
9.1	Outreach	96
9.2	Wayfinding.....	97
9.2.1	<i>Pre-Event Wayfinding</i>	97
9.2.2	<i>Post-Event Wayfinding</i>	97
CHAPTER 10.	MONITORING, REFINEMENT, AND PERFORMANCE STANDARDS	98
10.1	Purpose	98
10.2	Monitoring Methods.....	98

EXECUTIVE SUMMARY

The Transportation Management Plan (TMP) is a management and operating plan designed to provide multi-modal access to a range of events at the new Golden State Warriors (GSW, or Warriors) Event Center in San Francisco's Mission Bay neighborhood, and to the retail and office uses on the same development site. The purpose of the plan is to ensure safe and efficient access by promoting and facilitating the use of nearby public transit services and pedestrian and bicycle infrastructure for travel to and from the Event Center and the adjacent mixed use development, thereby reducing vehicular impacts to the Mission Bay/Dogpatch area and the adjacent neighborhoods. The plan's primary goals include a reduction to single occupancy vehicle trips to/from the site, with a maximum auto mode split of 53 percent for event attendees during weekday peak event conditions (6:00PM – 8:00 PM), and a maximum auto mode split of 59 percent for all trips during weekend peak event conditions (6:00 PM – 8:00 PM). All employees and visitors will be encouraged to utilize other means for travel to and from the site. Auto mode share goals are based on site-specific travel demand estimates being prepared as part of the project's subsequent environmental impact report (SEIR) analysis.¹

The TMP is a working document that will be expanded and refined over time by the Warriors, the City of San Francisco, and other agencies responsible for carrying out the plan. An active monitoring process will occur during the four years after the project's completion to make any necessary adjustments. It is also anticipated that subsequent refinements will be made to respond to changing circumstances, new transportation access and parking opportunities, and planned transportation improvements that are implemented in the project vicinity over time.

The TMP provides a summary of the Event Center and mixed-use development project description; event and no-event scenarios that are addressed in this document; existing transportation facilities and planned major transportation projects; travel characteristics of Event Center attendees, office workers, and retail patrons; transportation control recommendations; travel demand and communication strategies; and performance standards.

The scenarios addressed in this plan are as follows.

- Typical Day (No-Event Day)
- Convention – weekday event with approximately 9,000 attendees
- Arena Concert – evening event with approximately 14,000 attendees
- NBA Game – an evening Warriors game with 18,064 attendees
- Dual Event – NBA game or arena concert coinciding with AT&T Park event

The travel characteristic assumptions for varying scenarios at the proposed development are based on the analysis prepared concurrently for the project's draft SEIR.

¹ *Travel, Parking, and Loading Demand Estimates for the Proposed Event Center & Mixed Use Development at Mission Bay Blocks 29-32 Final Memorandum*, Advant Consulting and LCW Consulting, November 19, 2014.

Transportation control strategies that are identified in the Plan include provision of an on-site, site-specific Transportation Management Center (TMC) located in the security center in the Event Center; designation of a Parking Control Officer (PCO) director who will staff the Event Center TMC and manage game-day controls; designation of up to three in-field PCO supervisors who will roam and oversee PCO operations; the potential locations of PCOs who will direct vehicular and pedestrian traffic under various event scenarios; provision of GSW or Event Center staff to assist with wayfinding and crowd management; a coordinated partial street closure of the northbound lanes on 3rd Street (between 16th Street and Mission Bay Boulevard South) and partial closure of westbound lanes on South Street for a short period after the conclusion of peak NBA and arena concert events; and designation of curbside locations for Muni buses, Mission Bay Transportation Management Association (TMA) shuttles, other shuttle buses, charter buses, taxis, Transportation Network Companies (TNCs) (e.g., Uber, Lyft), limousines, private vehicle loading and unloading, and media trucks. The transportation control strategies also address transit boarding at the nearby Muni stations and pedestrian control at the Event Center main garage driveway access point on 16th Street.

Communication strategies that are identified in the Plan include promotion, outreach and wayfinding strategies designed to inform event attendees of the various transportation options that are available and provide directions on how to access them. This includes a description of transportation information that will be provided by the Warriors and event promoters with event ticket purchases. The wayfinding strategies include a series of signs that will be placed to facilitate circulation and access in and around the buildings on-site.

CHAPTER 1. INTRODUCTION

This introduction describes the purpose, goals, and objectives of the Transportation Management Plan (TMP) for the Golden States Warriors Event Center and Mixed-use Development Project (“Event Center Development”). It gives a project overview within the San Francisco context, including ongoing and upcoming projects that will change the transportation system in the area and may prompt adjustments to the TMP in the coming years. It then lists organizations and agencies with a stake in the project with their respective roles and responsibilities, and discusses the overall TMP implementation strategy, including coordination between stakeholders. Finally, it outlines the information contained in the remainder of the TMP.

1.1 TMP PURPOSE, GOAL, AND OBJECTIVES

The purpose of the TMP is to outline strategies to optimize access to and from the Event Center Development within the constraints inherent to a large public event. The TMP considers the travel characteristics of Event Center attendees, office workers, retail patrons, and all other visitors to the site. Its main goal is to ensure safe and efficient access for all modes with a particular focus on promoting pedestrian, bicycle, and transit access to the Event Center and adjacent mix of uses, thereby reducing vehicular impacts to the Mission Bay/Dogpatch area and nearby neighborhoods.

The objectives of the TMP are:

- To facilitate and promote safe use of non-automobile transportation by people attending and supporting Event Center events or office and retail uses on-site, and to maintain the stated maximum auto mode share of 53 percent under peak weekday event conditions (6:00 PM – 8:00 PM) and 59 percent under peak weekend event conditions (6:00 PM – 8:00 PM);
- To highlight and optimize the use of transit by both event attendees and event or daily employees;
- To facilitate and maximize bicycle use by Event Center Development event attendees and event or daily employees;
- To facilitate a high-quality walking experience to the Event Center Development from adjacent residences, employment locations, transit stations, and parking garages by identifying key walking routes and major street crossing locations, so that wayfinding can be provided and PCOs can be located at critical points to manage the interaction of pedestrians and vehicles during major events;
- To publicize the non-traditional transportation resources existing in the site vicinity, including the Mission Bay Transportation Management Association (TMA) shuttle service and pedicab ride providers;
- To maximize safety for all transportation users at key locations around the Event Center Development site and broader neighborhood during event ingress and egress;
- To ensure the safe interaction of pedestrians and cyclists traveling along South and 16th Street and vehicles accessing the Event Center Development garage entries located on South Street at Bridgeview Way and on 16th Street at Illinois Street; and
- To facilitate the safe and efficient flow of vehicle traffic into and out of the site and throughout the Mission Bay neighborhood during event and no event conditions.

The TMP is a living document and will be amended from time to time by the Golden State Warriors, in coordination with SFMTA and with input from the nearby community, as travel patterns change as a result of development and changes to the roadway infrastructure and operations. The Golden State Warriors are committed to implementation of flexible strategies to advance the goals and objectives outlined here.

1.1.1 Design Objectives

The key transportation-oriented objectives of the Event Center Development design are:

Guest Safety

- Design clear and distinct pick-up and drop-off locations for each travel mode such that zones are primarily single-purpose and potential conflict areas are minimized (i.e., transit zones to the west, bikes and cyclists to the southeast, private vehicles to the east).
- Discourage mid-block pedestrian crossings at 3rd Street, 16th Street, or Terry François Boulevard
- Create crossings that work for an all-day, all-year development; avoid creating crosswalks that only operate under PCO supervision
- Reduce conflicts between pedestrians and autos at driveways and garage entrances

Guest Convenience

- Locate guest arrival areas near building entrances and other conveniences to create visual connections to the travel mode and to augment wayfinding, including:
 - The southeast arena entrance (along Terry François Boulevard and 16th Street)
 - Office entrances on 16th Street and South Street, especially for regular TMA shuttles
 - Northwest and southwest site corners, staging areas, and pathways, especially for arrivals via bike and Muni bus or light rail
- Prioritize open pathways designed for optimal pedestrian circulation and public access
 - Maintain open access to the atrium to preserve the 16th Street/Main plaza connection
 - Highlight, through both static and dynamic wayfinding, the northwest corner and southwest corner, and the gracious and pleasant paths to and from the Main Plaza to these corners
 - Leverage the position of the Gatehouse and the decorative fencing proposed on Third Street a means to direct patrons to the northwest and southwest corners of the project and to discourage mid-block crossings of 3rd Street
- Locate drop-off and pick-up locations for a given mode in close proximity to each other for pre- and post-event scenarios to create consistency, enhance intuitiveness, and create efficient paths of travel for patrons

Synergy & Resource Intelligence

- Build a network of dynamic, up-to-the-minute transit information signage and wayfinding, both inside and outside of project buildings, to aid in the efficiency of patron arrivals and departures
- Locate the bike valet close to the Terry François Boulevard cycle track and nearby Bay Area Bike Share station(s)
- Position the bike valet in sight of the Arena's southeast Lobby building entrance
- Locate the daily TMA shuttle stop close to office lobbies

Good Neighbor Policies

- Create generous pedestrian queuing areas on-site to minimize neighborhood spillover
- Maintain local access to 4th Street and Bridgeview Way by promoting alternate pre- and post-game routes that emphasize use of 3rd Street, 7th Street, and Terry Francois Boulevard
- Access to building entries, garage entries, and sidewalk areas for daily users of the 409 and 499 Illinois buildings, the 450 South Street garage, and of the future buildings on Blocks 33-34 will not be unreasonably impeded
- Maintain access to the UCSF Mission Bay Campus and UCSF Hospitals for patients, employees, and the university community
- Maintain the site's identity as a porous, accessible, and welcoming neighborhood center

Media Requirements

- Locate media to provide for reliable satellite connections as per NBA League guidelines while providing under-ground cabling below sidewalks for the safety of pedestrians

1.2 KEY STAKEHOLDERS

Key stakeholders in the TMP and their respective roles and responsibilities are listed in **Table 1-1**.

TABLE 1-1: KEY STAKEHOLDERS, ROLES, AND RESPONSIBILITIES

Key Stakeholders	Roles and Responsibilities
Golden State Warriors (GSW)	The GSW is the project sponsor and is responsible for implementation of the TMP.
San Francisco Municipal Transportation Agency (SFMTA)	The SFMTA oversees the City’s public right-of-way (ROW) and manages all surface transportation infrastructure and systems in the City, including roads, curb space, sidewalks, bicycle lanes, parking, transit, and traffic control measures ¹ . The SFMTA also regulates taxis and enforces parking regulations. SFMTA operates San Francisco’s bus and light rail service under the Muni brand, which will provide access to the Event Center and mixed-use development. Recommendations related to physical changes to the ROW must be supported by the SFMTA and approved by OCII. The SFMTA also coordinates closely with the SFCTA on the ongoing Waterfront Transportation Assessment, which includes the Mission Bay neighborhood in its study area.
Office of Community Investment and Infrastructure (OCII)	OCII has jurisdiction over implementing any major redevelopment projects in the Mission Bay North and South Redevelopment Project Areas. OCII will act as the land use regulatory authority and the lead agency on the EIR. OCII will ensure that the project follows the Mission Bay Infrastructure Plan, which is the guiding document for remaining infrastructure improvements in the Mission Bay Area.
Caltrans	Caltrans is California’s Department of Transportation and has jurisdiction over the freeways that provide regional vehicle access to the proposed Event Center Development site.
Port of San Francisco (Port)	The Port of San Francisco (Port) has jurisdiction over San Francisco’s waterfront, including Terry François Boulevard and small portions of 16 th and South Streets at their eastern edges. ¹ This includes the provision of any new ferry terminal facilities and a cycle track facility, and jurisdiction over street parking operations in the areas noted above.
San Francisco County Transportation Authority (SFCTA)	The SFCTA serves as the Congestion Management Agency (CMA) for San Francisco County and is responsible for the ongoing Waterfront Transportation Analysis, which includes the Mission Bay neighborhood in its study area.
San Francisco Planning Department	The Planning Department is responsible for reviewing and commenting on project design, and assessing environmental impacts on the City and its residents in collaboration with the overall assessment being led by OCII
San Francisco Department of Public Works (DPW)	DPW is responsible for street maintenance and implementation of streetscape projects as part of the Mission Bay Plan, including curb ramp installations and upgrades.
San Francisco Police Department (SFPD)	SFPD is responsible for emergency response, oversight/override of traffic control plans, incident management, and coordination with SFFD and the California Highway Patrol as needed.
San Francisco Fire Department (SFFD)	SFFD provides fire suppression and emergency medical services to the residents, visitors, and workers within San Francisco.

TABLE 1-1: KEY STAKEHOLDERS, ROLES, AND RESPONSIBILITIES

Key Stakeholders	Roles and Responsibilities
Caltrain	Caltrain is a California commuter rail line connecting San Francisco to the Peninsula and Santa Clara Valley to the south. Its San Francisco terminal station is at 4 th and King Streets, approximately 2/3 mile north of the project site. The 22 nd Street Caltrain station is also located within walking distance of the Event Center Development.
Bay Area Rapid Transit (BART)	BART is a rapid transit system that serves the San Francisco Bay Area. It operates five routes with 44 stations in four counties. Downtown San Francisco is roughly the geographic center of the BART system, and its Embarcadero, Montgomery Street, Powell Street, and 16 th Street Mission stations are within approximately 1.7 to 2.1 miles of the Event Center Development. Powell Street station will be connected to the site vicinity by the Central Subway upon that project's completion in 2019.
Water Emergency Transportation Authority (WETA) ²	WETA was established by Senate Bill (SB) 976 to improve the ability of ferries to respond in an emergency and to consolidate several regional ferry services. WETA operates service to Alameda/Oakland, Harbor Bay, San Francisco, South San Francisco, and Vallejo as San Francisco Bay Ferry. WETA is exploring the potential for a ferry terminal at the foot of 16 th Street near the Event Center Development.
Golden Gate Ferry (GGF) ³	GGF operates frequent ferry service between San Francisco and Larkspur in central Marin County, and between San Francisco and Sausalito in southern Marin County. Extra service is also offered from Larkspur to AT&T Park for Giants home games and other sporting and music events.
Mission Bay Transportation Management Association (TMA)	The TMA is a non-profit organization established to maximize access and mobility to, from, and within Mission Bay by means of free shuttle operations servicing residents and employees in the area. Shuttles transport patrons primarily to key transit locations, including the Caltrain station at 4 th St. and King St. and the Powell St. BART station. The Warriors will become members of the association and provide annual contributions for the expansion of this service (including service to Blocks 29-32 and additional evening and weekend routes throughout the neighborhood).
University of California, San Francisco (UCSF)	The UCSF Mission Bay campus is located in close proximity to the Warriors' project. Campus operations include regular shuttle service between UCSF campuses across San Francisco; these shuttles are intended to serve only university personnel (faculty, staff, students, etc.). They are, however, a regular presence within the Mission Bay street network.
Community Groups	Several community groups offer consultation and feedback on the project design and operational planning to help ensure a smooth integration into the Mission Bay neighborhood. Some community groups include the Mission Bay Community Advisory Committee (CAC), San Francisco Bicycle Coalition, and others.

Notes:

1. Although the Port has jurisdiction over certain street segments in San Francisco, SFMTA still manages all aspects of surface transportation on those streets under agreement with the Port.

1.3 PROJECT CONTEXT

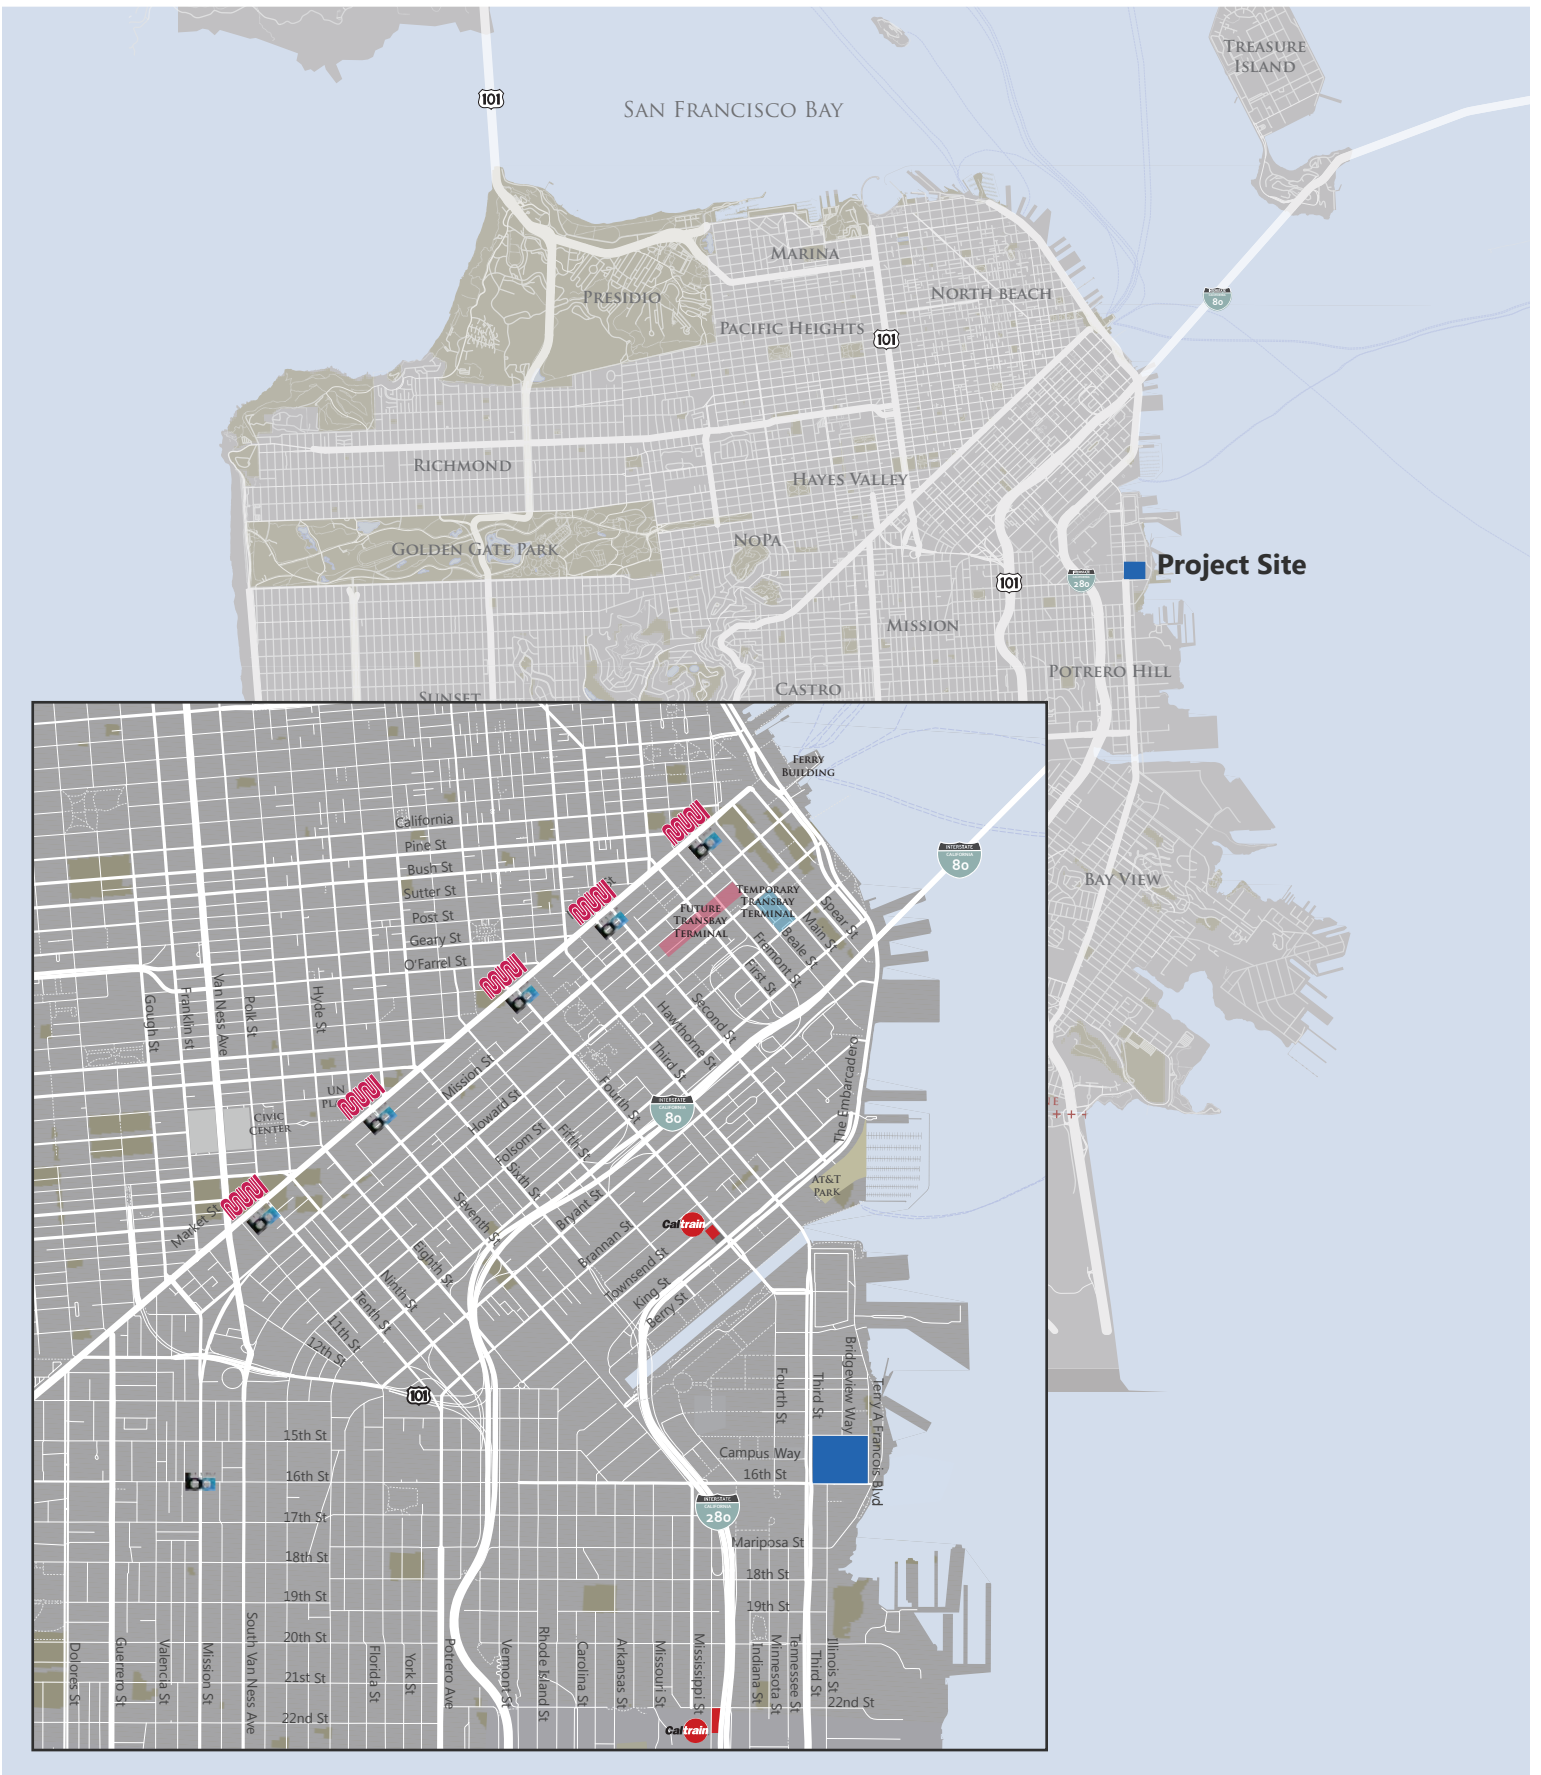

The proposed Event Center Development site consists of Blocks 29, 30, 31 and 32 in the Mission Bay neighborhood of San Francisco and is served by local and regional transit (Muni, ferries, regional buses and Caltrain); a developing roadway, bike route, sidewalk network; and freeway access. Bicyclists will be encouraged to arrive at the site via 16th Street and the planned Blue Greenway along Terry François Boulevard. The project location is illustrated on **Figure 1-1**. The project site plan is illustrated on **Figure 1-2**.

The project site is located approximately 2/3 mile from AT&T Park, a 42,000 seat Major League Baseball Stadium and home to the San Francisco Giants. Although the Warriors season does not largely overlap with the Giants season, they share some transportation facilities and management strategies. Although rare, a dual event scenario is considered as part of this document.

Over the past several years, many projects in the area have affected the transportation system in the vicinity of the Event Center Development, including the opening of the T 3rd light rail line connecting San Francisco's Financial District to Sunnydale, which started operation in 2007. The projects listed in the following sections, which are either recently completed, under construction, pending, or under consideration, will continue to enhance the transportation system in the area and may warrant changes to the TMP as they are implemented. Several significant transportation investments at or near the site are projected to begin operation within the next 5-10 years. These near-term transportation projects are illustrated on **Figure 1-3** and include SFMTA's Central Subway, the electrification of Caltrain, the Blue Greenway, enhanced transit service along 16th Street, and the 2nd Street Project, among others. These types of capacity and service enhancements provide essential context for planning safe, efficient transportation access to the Event Center and adjacent office and retail uses.

Several large-scale development projects are also proposed for the Mission Bay neighborhood that may affect travel patterns in the area. The project's SEIR (currently being prepared) will analyze traffic patterns and intersection performances under cumulative conditions that contain several prominent developments in the project vicinity. The TMP may likewise need to be revised, after development projects are realized and operational, to more effectively manage transportation systems under all event and no-event conditions. Some reasonably foreseeable development projects include the following:

- Pier 70 Mixed-Use Project
- Seawall Lot 337 and Pier 48 Mixed-Use Project
- Kaiser Medical Office Building at 1600 Owens Street
- Central SoMa Plan
- UCSF Long Range Development Plan

Not to Scale

South Street Driveway:
three vehicle lanes

- ➔ Main Pedestrian Access
- ➔ Vehicle Access

16th Street Driveway:
two vehicle lanes, two truck access lanes

Not to Scale

-  MUNI Platform
-  Caltrain Station
-  BART Station
-  MUNI Station
-  Project Site

-  F Market & Wharves
-  KT Ingleside-Third Street
-  N Judah
-  J Church
-  L Taraval
-  M Ocean View
-  BART Line
-  Caltrain Line

Near-Term Transportation Projects

-  Central Subway
-  Blue Greenway
-  New Bus Route (22 Fillmore/Route 55)
-  Caltrain Electrification
-  Owens Extension
-  Ferry Building Expansion

NEAR-TERM TRANSPORTATION PROJECTS

1.3.1 Transit Projects

Through consultation with SFMTA a list of projects were selected based on their proximity to the Project site, ability to affect the transportation network, and likelihood of being completed. Several major near-term and long-term SFMTA Muni projects are proposed that, once implemented, will directly improve service frequency, capacity, travel time, cost-effectiveness and reliability in the vicinity of the project site.

SFMTA Muni Forward – This is the implementation phase of the SFMTA Transit Effectiveness Project (TEP). The project includes both general improvements throughout the system and measures for specific transit lines. Implementation is ongoing. The following changes are planned to take place in the project area:

- **10 Townsend** – The Muni Forward proposes to rename the 10 Townsend the 10 Sansome. Service would be rerouted off of Townsend down 4th Street. From 4th Street the route would extend through Mission Bay to new proposed street segments on 7th Street between Mission Bay Boulevard and Irwin Street, on Irwin Street between 7th and 16th streets, on 16th Street between Irwin and Connecticut streets, and on Connecticut Street between 16th and 7th streets. Peak period headways would be reduced from 20 to 6 minutes. Midday headways would be reduced from 20 to 12 minutes.
- **22 Fillmore** – The Muni Forward proposes rerouting the 22 Fillmore to continue along 16th Street, creating new connections to Mission Bay from the Mission neighborhood. The proposed route change would add transit to 16th Street between Kansas Street and 3rd Street and 3rd Street between 16th Street and Mission Bay Boulevard North. Muni Forward also proposes to change the AM peak period headway, reducing from 9 minute to 6 minute headways.

Additionally, the SFMTA has proposed two transit enhancement treatment visions for 16th Street (“Muni Forward”), of which one or a combination of the two will be selected by the SFMTA Board prior to implementation. The treatments are referred to as the Moderate and Expanded Alternatives in the TEP EIR. The Moderate Alternative proposes a number of physical changes to the portion of the rerouted 22 Fillmore in the vicinity of the Mission Bay campus site including, but not limited to, new transit stops, relocated transit stops, and transit bulbs (approximately 45 feet in length), as well as new traffic signals at Connecticut and Missouri streets. The Expanded Alternative includes the features listed for the Moderate Alternative as well as the conversion of a lane of mixed-flow lane of traffic to a transit-only lane (side running or center running to be determined) along 16th Street in both directions in the vicinity of the campus site as well as the prohibition of left turns at Bryant, Potrero (westbound only), Utah, San Bruno, Kansas, Rhode Island, De Haro, Carolina, Wisconsin, Arkansas, Connecticut, and Missouri streets. Both alternatives would reduce peak period headways; AM would be reduced from 9 to 6 minutes, PM peak headways would be reduced from 8 to 5.5 minutes, and midday headways would be reduced from 10 to 7.5 minutes. The stated purpose of both alternatives is to make the 22 Fillmore more frequent, reliable, and effective along 16th Street.

Prior to the extension of the 22 Fillmore into Mission Bay via either the Moderate or Expanded Alternative, which both require the addition of poles and extension of the Overhead Contact System (OCS), the SFMTA plans to implement a temporary motor coach service – the 55 Mission Bay - to coincide with the opening of the Phase One Medical Center at UCSF Mission Bay between Mission Bay and the 16th Street BART Station. The route would follow 16th Street from Mission Street to 3rd Street and 3rd Street from 16th Street to Mission Bay Boulevard North. The preliminarily proposed locations for new bus stops for this service in the vicinity of the Event Center site are on 16th Street at 4th Street (both directions) and on 3rd Street just south of Mission Bay Boulevard South (southbound direction). The operating hours and service frequencies of the proposal have not yet been made public at the time of publication of this document.

SFMTA Central Subway – SFMTA Muni will operate a light rail subway at high frequency between Chinatown, Union Square, Yerba Buena Gardens and the Caltrain depot at 4th and King Streets (about 2/3 mile from the project site) beginning in 2019. The T 3rd line will extend north from its current terminus at 4th and King Streets to serve this subway, and no longer operate along the Embarcadero. Construction of this project is well underway. This project would improve transit service between the project site and Downtown and create new connections between the project site and regional transit via connections to BART at Powell St. station.

SFMTA Bus Rapid Transit – SFMTA plans to build and operate a Muni “rapid bus” corridor with a terminal within 2/3 mile from the project site: the Van Ness corridor, with one of two lines terminating at 4th & King Streets. These service and infrastructure enhancements are expected to be in operation by 2020.

Caltrain Modernization Program – Caltrain plans to electrify the railway for increased efficiency and capacity. The Modernization Program will increase the frequency of service, including expanding the number of peak hour trains by one/hour. The project is scheduled for completion in 2021.

Transbay Transit Center – The new Transbay Transit Center, currently under construction and scheduled for completion in 2017, will be a major hub serving 11 transit providers. It will be located between Beale, 1st, Mission and Howard Streets, approximately 1.75 miles from the project site.

Ferry Building Landings and Terminals – the Port of San Francisco operates the ferry terminals at the Ferry Building two miles from the project site, in cooperation with the Water Emergency Transportation Authority (WETA) and Golden Gate Transit. Frequent, daily ferry service is provided between the Ferry Building and seven cities in Alameda, Solano, San Mateo and Marin Counties. The Ferry Building is also a major Muni bus and streetcar terminal hub, serving numerous cross-town and downtown lines. The Downtown San Francisco Ferry Terminal Expansion Project includes construction of up to three new ferry gates and implementation of several pedestrian amenities which would increase ferry capacity and improve the passenger experience, as well as provide additional emergency facilities in the event of a major catastrophe. The project is under environmental review and is expected to begin construction in early 2015. WETA is also currently exploring the possibility of constructing a terminal at the foot of 16th Street adjacent to the Event Center Development site, however, due to the preliminary nature of their study, ferry access to the site is not assumed for the sake of this TMP.

1.3.2 Pedestrian and Bicycle Projects

2nd Street Project – Multiple improvements are proposed for 2nd Street and could start construction as early as 2016. The goal of this project is to improve pedestrian safety along the corridor, create a more attractive public realm, provide a separated bicycle lane, minimize Muni delays, and increase foot traffic. These improvements would provide an enhanced pedestrian corridor for those walking from Downtown to and from the Event Center, offices, or retail proposed within the Event Center Development in Mission Bay.

Blue Greenway – This Port of San Francisco led project will create a network that connects public open space and water access in south-east San Francisco, from China Basin Channel to the San Francisco County Line, which will include a combination of bicycle and pedestrian trails and parks. Through Mission Bay along the Event Center Development frontage, the Blue Greenway will include a north-south bikeway on Terry François Boulevard that will connect to the Embarcadero bikeway to the north.

The 2009 Bike Plan and 2013 Bicycle Strategy includes several improvements to the bicycle network throughout the City. Of the improvements approved for implementation in the near-term and long-term, the following projects will affect bicycle circulation in the vicinity of the site:

- The transition of the Class III facilities on 16th Street to a Class II facility from 3rd Street to Terry François Boulevard (as an element of the Blue Greenway).
- The addition of bicycle lanes on Illinois Street from Cargo Way to 16th Street.
- The addition of bicycle lanes on Mississippi Street from 16th Street to Mariposa Street.
- The addition of a physically separated bikeway along The Embarcadero from 3rd Street to Fisherman's Wharf

1.3.3 Regional Traffic Projects

Proposal to remove the northern section of Interstate 280 – This proposal is currently being explored by the City and would remove the I-280 terminus on- and off-ramps from their current location adjacent to the Caltrain Station at 4th and King Streets. This removal may have various benefits, including uniting the neighborhoods currently split by the freeway, opening up land along I-280 and at the 4th and King Street rail yards for development, reducing the complexity of the downtown rail extension, and reducing vehicle-pedestrian conflicts at the crossing outside the Caltrain Station. If this project moves forward, it will likely affect access to the Event Center Development site by rerouting vehicle traffic to/from I-280, creating additional roadway connections between Mission Bay and areas west, and potentially altering pedestrian routes.

1.3.4 Near-Term Infrastructure Projects

New roadway projects are underway with an anticipated completion date of Spring 2015 at the following locations:

- Extension of Owens St from 16th Street to Mariposa Street / I-280
- Extension of 16th Street to Terry François Boulevard

New signals have recently been completed or are currently being constructed within 1 mile of the project site at the following intersections.

- 3rd Street / Channel Street
- 3rd Street / Mission Bay Boulevards
- 4th Street / Channel Street
- 4th Street / Gene Friend Way
- 16th Street / 4th Street
- 16th Street / Vermont Street
- 16th Street / 7th Street, and
- 7th Street / Mission Bay Drive / Berry Street

New signals are being constructed with an anticipated completion date in Spring 2015 at:

- Mariposa Street / 4th Street and

- Mariposa Street / I-280 SB On-ramp

Signal Modification projects are also underway within 1/3 mile of the project site. Signal reconfigurations are being constructed with an anticipated completion date in Spring 2015 at the following intersections:

- 3rd Street / 16th Street
- 3rd Street / Mariposa Street
- 16th Street / Owens Street
- Owens Street / Mariposa Street / I-280 NB Off-ramp
- Mariposa Street / I-280 SB On-ramp

Street restriping projects have been completed or are pending at the following intersections.

- 7th Street / 16th Street
- 7th Street / Mission Bay Drive / Berry Street
- Mariposa Street Bridge (over Caltrain tracks)
- Mariposa Street / 3rd Street
- Mariposa / 4th Street
- Mariposa Street from I-280 SB on-ramp to Pennsylvania Avenue

Street restriping projects are in the planning stages, and pending approval, at the following intersections.

- 16th Street / Potrero Avenue
- 7th Street / Brannan Street

Street widening or improvement projects are underway within ¼ mile of the site and have an anticipated completion date in Spring 2015 at the following locations.

- 3rd Street / 16th Street
- Mariposa Street from Owens Street to Illinois Street
- Connections to UCSF Mission Bay Campus (at 16th Street and Mariposa Street)
- NB I-280 off-ramp

1.4 IMPLEMENTATION STRATEGY

1.4.1 Coordination with Agencies and Transit Providers

Traffic controls proposed in the TMP will require coordination with several of the agencies described in section 1.2. **Table 1-2** summarizes the necessary coordination between the Warriors and public agencies and transit providers during Event Center events.

TABLE 1-2: PROPOSED CONTROL AND SERVICE COORDINATION SUMMARY

Control or Service	Entity	Coordination
Post-game special train service to South Bay	Caltrain	Real-time communication between Transportation Management Control (TMC) and Caltrain during games so any planned special event train can be put into service at 4 th /King station at the appropriate time.
Variable Message Signs (VMS)	Caltrans, SFMTA	Location, installation, and operation of variable message signs (VMS) alerting drivers of traffic conditions and temporary post-event lane closures on 3 rd Street.
Use of existing SFgo intersection surveillance cameras, as well as four new proposed surveillance cameras along the Event Center's perimeter streets, for observation of traffic conditions on streets pre-, during, and post-event	SFMTA	Permission from SFMTA to see live streams from video cameras from the TMC room at the Event Center.
Traffic management by Parking Control Officers (PCOs) on the streets pre-, during, and post-event	SFMTA	Real-time communication between TMC, Field Supervisor, variable message sign operators, emergency services personnel, and PCOs on the street.
Post-game special northbound light rail service	SFMTA (Muni)	Real-time communication between TMC and SFMTA (Muni) during events so that additional light rail trains can be put into service at appropriate times.
Pre- and Post-event Shuttles	Mission Bay TMA, Private Shuttle Providers, SFMTA	Real-time communication between TMC and Shuttle Operators during events so shuttle buses can be put into service at appropriate time.
Valet bicycle parking during events	GSW	The provision of valet bicycle parking and additional temporary secure corral parking during events at the Event Center will be coordinated with SFMTA and the San Francisco Bicycle Coalition (SFBC), or other vendor.
Pre- and Post-event Pedicab service along Terry Francois Boulevard	Private Pedicab Providers	Pre-event planning and clearly marked staging areas for private pedicab drivers.
Enhanced post-event BART service on event days	BART	Communication about event schedules so that BART can augment service by providing additional train cars post-event.
On-street special event pricing	SFMTA , Port	Provide event schedule to SFMTA Parking group and the Port for implementation of special event pricing at on-street parking meters during events, pending Port approval.
Emergency response and emergency vehicle routing	SFPD, SFFD, SDMTA	Real-time emergency response and PCO support as needed to ensure emergency vehicle access to and around the project site.

Source: Fehr & Peers 2014.

1.5 DOCUMENT ORGANIZATION

Chapter 2 summarizes the Event Center Development project and outlines the event scenarios. Chapter 3 describes the existing transportation system in the project vicinity, including the street network, transit, bicycle and pedestrian infrastructure, and regional traffic access. Chapter 4 describes the travel demand management program that will be implemented to increase the level of access to the project by transit, bicycling and walking. Chapter 5 describes the anticipated characteristics of Event Center attendees and visitors to the mixed-use development, including the key assumptions on which the TMP recommendations are based. Chapter 6 describes the proposed controls and is organized by event scenario, ranging from a no-event day to smaller convention events to the most complex event (Event Center event concurrent with event in AT&T Park). Chapter 6 also includes a discussion of the project's Transit Service Plan. Chapter 7 describes freight loading for the Event Center Development. Emergency vehicle access for the site is described in Chapter 8. Finally, Chapter 9 discusses communication strategies designed to complement the controls listed in Chapter 6, and includes wayfinding and outreach. Chapter 10 describes how the TMP will be monitored and refined over time, while outlining performance standards for evaluating the plan's effectiveness.

CHAPTER 2. PROJECT DESCRIPTION AND EVENT SCENARIOS

2.1 PROJECT DESCRIPTION

2.1.1 General

The proposed site is comprised of land referred to as Blocks 29, 30, 31 and 32, located in the Mission Bay South area of San Francisco. The 11-acre project consists of a new approximately 18,000-seat multi-purpose event center and mixed-use development including multiple office buildings, retail, restaurants, structured parking, plaza areas, and other amenities. The event center would host the Golden State Warriors basketball team during the National Basketball Association (NBA) season, as well as provide a year-round venue for a variety of other uses, including concerts, family shows, other sporting events, cultural events, conferences and conventions.

The proposed program for the Mission Bay South project site at Blocks 29-32 includes the following:

- Event Center Basketball seating capacity: 18,064
- Event Center supporting uses include a practice facility and Bayfront Terrace
- 750,000 square foot Event Center
- 25,000 square feet of GSW office space
- 580,000 square feet of office buildings
- 125,000 square feet of visitor-serving retail and restaurant uses
- 950 parking stalls in on-site parking structure
- 13 underground truck docks
- 132 stalls in existing structured garage at 450 South Street
- Access points for trucks and automobiles on 16th Street at Illinois Street
- Access points for small delivery vehicles and automobiles on South Street at Bridgeview Way

The public realm zones and uses for the Event Center Development are shown on the site plan in **Figure 1-2**. There will be five pedestrian entries to the site, one midblock on South Street, one on the 3rd Street frontage, one midblock on 16th Street, one at the corner of 16th Street and Terry François Boulevard via the southeast Plaza, and one midblock on Terry François Boulevard. Large open plaza areas will be located on the west side of the multi-purpose event center and in the southeastern portion of the site. The plazas will provide access to the retail and office uses on site and would be connected by a ramp wrapping around the exterior along the north and eastern-sides of the multi-purpose event center. An atrium connecting 16th Street and the western plaza area serves as a secondary connection between open spaces on-site.

2.1.2 Proposed Street Cross-Sections

As part of the Event Center Development, the existing or planned cross-sections for several adjacent streets are proposed to be modified to better meet the needs of the Event Center and surrounding mix of uses. The conceptual striping plan for the project site is shown on **Figure 2-1**.

The project proposes to revise the planned cross-section for 16th Street from 3rd Street to Terry François Boulevard. The revised street cross-section would include 6 foot bike lanes with a 4 foot buffer on both sides, -9 foot parking lanes on both sides (for the segment from Illinois Street to Terry François Boulevard), one 11 foot through lane in each direction, and an 11 foot center lane that would serve as left turn pockets at 3rd Street, Illinois Street, and Terry François Boulevard. The on-street parking provided along 16th Street will be metered for general daytime use on non-event days, but restricted during limited hours for a variety of event-related needs including shuttle bus loading, media trucks, and charter bus loading when events are scheduled. One on-street space on the north side of 16th Street, between 3rd Street and Illinois Street, will be designated for on-street metered commercial loading for all hours until event-related curb regulations go into effect.

The project also proposes to restripe South Street within the boundaries of the project. The proposed cross-section would include a 9-foot parking lane on the south side of the street and a parking lane on the north side of the street measuring just less than 12 feet. Parking would be prohibited on the north side of the street between the 450 South Street parking garage entrance and 3rd Street, and the curbside lane would be used for an exclusive westbound right turn lane at the 3rd Street intersection. The proposed cross section would also include an 11 to 12-foot through lane in each direction. A bus stop for the Mission Bay TMA shuttle will be provided on the south side of South Street, from the 3rd Street intersection east a distance of 60 feet. A taxi loading area will be provided on the south side of South Street, from the Event Center garage access (opposite Bridgeview Way) east a distance of 100 feet. The remainder of the curbside frontage along South Street will be metered for general daytime use on non-event days. Eight on-street spaces on the south side of South Street will be designated for on-street metered commercial loading for all hours until event-related curb regulations go into effect. During events as needed, all on-street parking on the south side of South Street between 3rd Street and Terry François Boulevard will be prohibited so this space may be used for bus and taxi loading areas. Parking on the north side of South Street may be prohibited during peak events to allow use of the westbound parking lane for vehicle access and egress to the Event Center garage and the 450 South Street garage.

The planned Blue Greenway project will add a two-way bikeway along the east side of Terry François Boulevard with a 4-foot buffer. The reconstructed portion of Terry François Boulevard along the project frontage will also provide four travel lanes and on-street parking lanes on both sides. A Paratransit stop, 75 feet in length, which will accommodate up to three vans, will be provided on the west side of Terry François Boulevard near the southeast entrance to the Event Center and elevators to the Pedestrian Path. The remainder of the curbside frontage along Terry François Boulevard will be metered for general daytime use on non-event days. Eight on-street spaces on the west side of Terry François Boulevard will be designated for on-street metered commercial loading for all hours until event-related curb regulations go into effect. During events as needed, all on-street parking on the west side of Terry François Boulevard will be prohibited. During these conditions, the frontage will be designated for taxi use, Paratransit vehicle use, and TNC or private vehicle passenger drop-off/pick-up. At the intersection of Terry François Boulevard and 16th Street, two-stage bike boxes or equivalent measures will be provided to facilitate safe turns for cyclists traveling between 16th Street and the Blue Greenway bikeway on the east side of Terry François Boulevard.

In addition to the changes in cross sections, the following intersection controls would be implemented as part of the proposed project:

- The intersection of Terry A. Francois Boulevard/South Street is currently stop-controlled at the eastbound approach to the intersection, and would be signalized.
- The intersection of Bridgeview Way/South Street is currently uncontrolled, and would be made a side-street stop-controlled intersection with southbound vehicles on Bridgeview Way required to stop.
- The new intersection of Terry A. Francois Boulevard/16th Street would be signalized.
- The intersection of Illinois Street/16th Street is currently uncontrolled, and would be made an all-way stop-controlled intersection. Conditions at this intersection would be monitored, and if determined by the SFMTA that a traffic signal is warranted, the intersection would be signalized.
- The intersection of Terry A. Francois Boulevard/Illinois Street/Mariposa Street is currently stop-controlled, and would be signalized.

Lane Shift in Intersection

- Bicycle
- Vehicle
- Turn Lane

Not to Scale

2.1.3 Mission Bay TMA Shuttle Program Expansion

The Mission Bay Transportation Management Association (TMA) strives to reduce single-occupant vehicle trips by encouraging alternative modes of transportation for residents, employees and visitors to the Mission Bay development area. The Mission Bay TMA currently provides two free shuttle bus route services (east and west) between Mission Bay and the Powell Street BART Station and the 4th/King Caltrain Station.

The Warriors will join the Mission Bay TMA and the organization's required contributions to the association will enable expanded service, which may include additional evening or midday shuttles and/or weekend service. Additional routes to locations including the 16th Street BART Station and/or Transbay Terminal may also be feasible. This service will enable office employees and retail visitors to access the site from key transit locations. All standard shuttle service funded in part by the Warriors development will be an integrated part of the TMA network and will continue to be free of charge for all residents and employees in Mission Bay, regardless of origin or destination. If the Warriors choose to fund incremental event-only shuttle service in partnership with the TMA, such service would be supported exclusively by the Warriors and limited to event attendees.

The site's design includes an additional TMA shuttle stop, located on the south side of South Street just east of 3rd Street, located by the lobby of one of the project's office/lab buildings. This stop may also serve developments on the UCSF campus to the west, the Gap (existing) and Uber (planned) office buildings on the north side of South Street, and the Bayfront Park nearby.

2.1.4 Bicycle Parking

Bicycle parking will be provided in an enclosed 300+ bicycle valet facility located on the 16th Street frontage just west of the southeast Event Center entrance. Valet doors will face east to direct departing cyclists towards the signalized intersection at Terry Francois Boulevard and 16th Street, where they can safely mount their vehicles. The bike valet facility will be available for self-park to arena and GSW employees for all-day use but will not be staffed during non-peak event times; it is assumed that the valet partner and the SFMTA will provide guidance on the most efficient secure storage system under these conditions. The bike valet is proposed to be staffed by a partner such as the San Francisco Bicycle Coalition (SFBC) for evening use by ticketholders during peak events such as NBA games and concerts. The valet parking facility will be attended from two hours before the start of peak events to approximately one hour after the event ends. Additional valet service will be provided by partners at temporary, staffed bike corrals of 50-100 bikes on plaza level in the southeast and west portions of the site for events where bike use is projected to exceed the supply provided by the permanent 300+ space bike valet facility. This additional bike corral will be positioned to be accessible to bicyclists, but not to interfere with pedestrian pathways or ADA access points. Additional bicycle parking will be located throughout the development for daily users, including a secure bike parking room for each office building for office and retail employees and bike racks at ground level on South Street, Terry François Boulevard, and 16th Street for all users. Bike rack design will be determined in consultation with SFMTA staff. Total proposed bike parking is in excess of 500 spaces (including temporary corrals).

In addition to the bicycle parking program, the Event Center Development program will include sponsorship for a Bay Area Bike Share station on or near the site, likely along Terry Francois Boulevard or South Street, and support in principle for additional stations in the project vicinity. Precise location of the Bay Area Bike Share station(s) will be determined through coordination between the Port of SF, the SFMTA, and the bike share operator.

2.1.5 Vehicle Parking

The current Event Center Development program includes an approximately 950-space parking structure with below-grade parking and an at-grade level located under the plaza podium, all concealed from the public's view. Access to the garage will be provided via two controlled driveway entrances, one on South Street at Bridgeview Way and the other on 16th Street across from Illinois Street.

The 16th Street driveway will serve as the primary access point for arena patrons, who will be required to show pre-purchased parking passes to Event Center staff located on the street prior to entering the driveway. Any parking passes can be scanned at the interior end of the driveway to allow more cars to queue upon arrival. Office workers will also use the 16th Street Driveway, where, Automatic Vehicle Identification System (AVI) or fob controls will enable access at an entry point at the interior end of the driveway. AVIs may also be used for select season ticket holders for Event Center uses. The South Street driveway will provide access to retail patrons on-site and will include a valet drop-off area within the garage able to serve up to 280 vehicles. Self-parking visitors to office or retail during daytime hours will utilize a more traditional system using ticket-issuing machines and pay-on-foot ticket kiosks located throughout the garage. Each driveway will feature one in-bound lane during event hours and two egress lanes during the post-event period.

There will also be 13 truck docks located below grade, with access via distinct driveway lanes at the 16th street entry. The truck dock is physically separated from the primary vehicle parking areas.

In addition, the Golden State Warriors organization has purchased the right to use 132 additional stalls located in the structured parking garage at 450 South Street, directly across the street from the site's northern boundary. These spaces will be used by daily office employees and/or Golden State Warrior employees, not by event attendees. The Warriors are open to working with additional third parties to accommodate excess parking demand if the need arises.

Event attendees who purchase reserved parking on-site will receive instructions for entering and exiting the Event Center garage with their ticket confirmation. They will also receive a dated parking pass to hang on their rear view mirror. Signage will be provided at both Event Center garage access points indicating event center parking is available for those attendees with pre-purchased tickets only. The parking operation on event days will consist of attendants checking entering vehicles for valid parking access to a space in the garage. The parking pass checks will be done by attendants stationed curbside at garage driveways along 16th Street and South Street so that vehicles without proper credentials will not be able to enter the parking garage driveway. If queues extend from the 16th Street garage driveway back onto 16th Street, this access will be temporarily closed and inbound event attendees will be directed to the South Street garage access. Vehicles without reserved parking passes will be directed to the north or to the west of the site to other nearby parking facilities off-site.

Parking for retail and restaurant customers will be available at the 950-space garage on no-event days, during daytime events, and on non-peak event evenings. Garage operation for these customers will consist of attended valet parking. The valet parking drop-off and pick-up area will be located within the garage via the South Street driveway where the majority of the retail uses are located. When parking in the garage is not available, and during peak events, valet attendants will park retail customers' vehicles at off-site locations, including public lots in the vicinity.

Retail and office employees with reserved parking will use the 16th Street entry to the parking garage across from Illinois Street. The garage operation at this location will be an automated electronic system (no attendants) to facilitate efficient entry/exit for these daily users.

As part of the proposed street restriping, on-street metered parking is planned to surround the site on three sides – South Street, Terry François Boulevard, and 16th Street. This on-street parking will be used for various parking and loading designations on event days. During no-event times, the on-street space may be used for general parking, as summarized in **Table 2-1** and **Figure 2-2**. Pending Port approval, on-street spaces on blocks adjacent to the Event Center Development are likely to be marked with Special Event parking signs, similar to those found in the vicinity of AT&T Park, and carefully monitored for compliance.

TABLE 2-1: NO-EVENT ON-STREET PARKING³					
Street Segment		From	To	Length (ft.)	On-Street Parking Available^{1,2}
South Street	North Side	3rd Street	450 South Street Garage Driveway	225	--
		450 South Street Garage Driveway	Bridgeview Way	140	5
		Bridgeview Way	Terry François Boulevard	315	14
	South Side	3rd Street	Bridgeview Way	410	15
Bridgeview Way		Terry François Boulevard	305	--	
Terry François Boulevard	East Side	South Street	16th Street	610	29
	West Side	South Street	16th Street	610	15
16 th Street	North Side	3rd Street	Parking Garage Driveway	185	7
		Parking Garage Driveway	Terry François Boulevard	515	24
	South Side	3rd Street	Illinois Street	170	7
		Illinois Street	Terry François Boulevard	505	23

Notes:

1. On-street parking space = 15' for end stall; 20' for regular stall; 25' for loading stall
2. Red zone at each corner = 20'
3. Excludes TMA shuttle stop and no-event taxi zone, both also located on the south side of South Street, and select metered commercial loading zones on South Street and Terry François Boulevard. .

Not to Scale

2.2 EVENT SCENARIOS

The event scenarios and time periods analyzed in the TMP are designed to provide a range of typical scenarios, including several of those being studied for transportation impacts in the project SEIR. In full, this range of scenarios will offer a menu of options to event operators and City personnel to fit most event conditions. Transportation control measures for events not specifically described will be derived based on reviewing the plans for events with comparable attendance levels and time periods included in the TMP and making adjustments as needed.

The primary event scenarios that are addressed in this TMP are as follows:

- Typical No-Event Day
- Convention – weekday event with 9,000 attendees
- Arena Concert – an evening event with 14,000 attendees
- NBA Game – an evening Warriors game with 18,064 attendees
- Dual Event – NBA game or arena concert coinciding with an AT&T Park event (with 41,500 attendees)

2.2.1 Typical No-Event Day

The retail, restaurant, and office uses located adjacent to the Event Center will be open 365 days a year. Project sponsors anticipate daily activity from these users in addition to passive recreation or seasonal festivals in the open plaza areas and in Bayfront Park located across the street.

2.2.2 Small Event

Small events (3,000 to 9,000 attendees) may consist of conventions, small “arena theater” concerts, family shows, non-NBA sporting events, and other types of events to be decided. For the purpose of the TMP, a small event is defined as a daytime convention with an attendance of 9,000 people.

2.2.3 Arena Concert Event

Arena concert events are defined in this TMP as events with 14,000 attendees. The estimated 30 annual arena concerts (typically occurring on Friday and Saturday evenings within a 7:30 PM to 10:30 PM window) at the event center would vary in attendance levels, depending on the artist and stage configuration. The estimated average attendance level would be approximately 12,500 patrons. The event center design would allow for an end-stage concert configuration to accommodate a maximum of 14,000 patrons.

Occasionally, arena concerts would occur in a full 360-degree center-stage configuration which would allow for a maximum attendance above the seated capacity of 18,064 – up to 18,500 patrons. This would account for less than 10 percent of the total annual arena concerts (no more than four per year). Logistics for these larger arena concerts are considered as part of the peak event scenario.

2.2.4 Peak Event

Peak events are defined in this TMP as events where more than 90 percent of the seating capacity of the Event Center will be occupied (i.e. more than 16,200 attendees). These include all GSW pre-season, regular season,

and post-season games as well as sold-out center stage concerts. The peak event analyzed in detail in the TMP is a sold out basketball game that fills the Event Center to capacity (18,064 attendees).

The NBA regular season consists of 41 home games.

The majority of games take place in the evening (7:30 PM tipoff). In the 2012-2013 season, there was one daytime game (1:00 PM tipoff) during the regular season and it took place on a holiday (Martin Luther King Day, 01/21/13). Since most concerts typically take place in the evening, most of the egress from the Event Center will occur at night, during off-peak traffic conditions. Some games and concerts, though, will have ingress activity during the weekday evening commute period. Most inbound pre-event traffic on weekdays will be traveling in the opposite direction of evening commute traffic that is exiting the area.

2.2.5 Peak Event Concurrent with Event at AT&T Park

The dual event scenario occurs when a high-attendance event at the Event Center (a sold-out NBA game or concert) and a baseball game or sold-out concert at AT&T Park occur at the same time. This combination of events, in which up to 18,064 persons would be at the Event Center and up to 41,500 persons at AT&T Park, would most likely occur on a weekend evening. Since the 2004 seasons, there have been 19 days in which both the Giants and Warriors have had overlapping regular season home games, for an average of approximately 2 such days per year. The transportation control strategies for a dual event scenario also apply when a baseball game or sold out concert at AT&T Park occurs at the same time as a 14,000 person concert at the Event Center.

2.3 TYPICAL ANNUAL EVENT DISTRIBUTION

It is anticipated that the Event Center will have a total of approximately 200-220 events each year, distributed as follows:

- **43-60 GSW home games** (2-3 pre-season + 41 regular season + a maximum possible of 16 home playoff games), all taking place from 7:30 PM to around 9:40 PM.
- **45 Concerts**, consisting of approximately 30 large arena concerts and 15 small “arena theater” concerts. These events will occur mostly on Friday and Saturday nights from 7:30 PM to 10:30 PM, concentrated during late fall, winter, and early spring.
- **55 Family Shows**. Tours typically perform 10 shows in the building over 5 days (Wed-Sun) as described in Table 2-2.
- **31 Conventions/Corporate Events**, distributed throughout the year as the building schedule permits.
- Approximately **30 other sporting events** distributed throughout the year as the building schedule permits.

Table 2-2 summarizes the annual event distribution.

TABLE 2-2: TYPICAL ANNUAL EVENT CENTER EVENT DISTRIBUTION

Event Description	Quantity	Event Times	Daytime or Evening
Warriors Events	43-60		
Pre-season	2-3	7:30 PM – 9:40 PM	Evening
Season	41	7:30 PM – 9:40 PM	Evening
Post-season	0-16	7:30 PM – 9:40 PM	Evening
Non-Warriors Events	161		
Concerts	45		
"Arena Theater" Concerts (3,000 attendees)	15	Fri-Sat 7:30 PM – 10:30 PM	Evening
Arena Concerts (14,000 attendees)	30	Fri-Sat 7:30 PM – 10:30 PM	Evening
Family Shows	55	Typically 10 shows over 5 days (Wed. to Sun.): Wed. (1): 7:30 - 9:00 PM Thur. (1): 7:30 - 9:00 PM Fri. (2): 10:30 AM - Noon; 7:30 - 9:00 PM Sat. (3): 11 AM-12:30 PM, 3:00 PM - 4:30 PM; 7:00 PM -8:30 PM Sun. (3): 11 AM - 12:30 PM, 3:00 PM - 4:30 PM; 7:00 PM-8:30 PM	Both
Conventions/ Corporate Events	31	Variable	Both
Other Sporting Events	30	Variable	Both

Notes:

1. Of the peak events, it is anticipated that fewer than 10 will overlap with events at AT&T Park.

Source: Golden State Warriors.

CHAPTER 3. EXISTING CONDITIONS

Chapter 3 describes existing transportation systems serving the Event Center Development site, including the street network, freeways, transit hubs, bicycle facilities, and truck routes. Select commitments to make near-term significant changes in conditions that are certain and fully-funded are noted as many of these investments and changes in capacity and service will be completed by 2020 and will be key to assumptions about the operation and functionality of the transportation networks serving the Event Center Development. This Chapter is included in the TMP for contextual and informational purposes only. A full environment document will be prepared that includes a more complete and quantitative analysis of the existing conditions as they pertain to transportation.

3.1 PEDESTRIAN FACILITIES

Major pedestrian routes to the Event Center Development include 16th Street for east-west travel as well as 3rd Street and Terry François Boulevard/Bay Trail for north-south travel.

Within the project site area, sidewalks generally exist on both sides of the street, and are generally 12 to 15 feet wide. There is currently no sidewalk along the frontage of the project site except on 3rd Street; however sidewalks will be completed along 16th Street, South Street, and Terry François Boulevard adjacent to the site as part of the project. There are gaps in the sidewalk along nearby roadways that are currently under construction, including the south side of 16th Street between 7th and 3rd streets and the west side of 3rd Street between 16th and Mariposa streets. These sidewalk gaps will be closed upon completion of the adjacent buildings. All intersections surrounding the site have standard painted crosswalks and directional curb ramps. All signalized intersections include pedestrian signals with count down timers.

The **Bay Trail** is a planned 500-mile recreational shoreline corridor that, when complete, will encircle San Francisco and San Pablo Bays with a continuous network of bicycling and hiking trails. In the project vicinity, the Bay Trail will run along the east side of Terry François Boulevard, and is designated as a multi-use trail shared by pedestrians and bicycles. As a major mostly uninterrupted pedestrian facility, this path will carry a significant proportion of pedestrian flow to and from the Event Center and between the Event Center and major regional transit hubs and bike share stations, and certain segments along congested areas, such as the Embarcadero, are being designed to provide separate paths for bicyclists and pedestrians to improve safety.

3.2 TRANSIT NETWORK

This section discusses both regional and local transit provision to the proposed Event Center Development site. The site is well-served by both local and regional public transit. Local service is provided by Muni Bus, light rail lines, and the Mission Bay TMA shuttles. Regional service is provided by BART, Caltrain, AC Transit, Golden Gate Transit, SamTrans, and various ferry providers. Riders from these regional transit services would either walk or transfer to Muni or privately operated shuttles to access the Event Center Development. This section is organized in order of proximity to the site, starting with the transit hub that is furthest away (BART Stations) and ending with the one that is closest (Muni light rail platforms). Existing rail transit is shown in **Figure 3-1** and existing bus transit is shown in **Figure 3-2**.

3.2.1 Bay Area Rapid Transit (BART, Regional)

BART provides regional commuter rail service in the Bay Area. San Francisco's Financial District is centrally located within the system, which provides service to the East Bay (Pittsburg/Bay Point, Richmond,

Dublin/Pleasanton and Fremont) and to San Mateo County (San Francisco International Airport and Millbrae) with operating hours between 4:00 AM and midnight daily. In the Financial District, BART operates underground below Market Street. The Event Center Development can be most directly accessed from four BART stations including the Embarcadero (2.1 miles), Montgomery Street (1.8 miles), Powell Street (1.7 miles), and 16th Street Mission (1.7 miles) stations. When the Muni Central Subway opens in 2019, its connection to the BART Powell Street Station will likely make this a primary transfer station to the Event Center. During the weekday PM peak period, when many event-goers are expected to arrive, headways are generally 5 to 15 minutes for each line. Off-peak headways are generally 20 minutes for each line. BART trains range from 3 to 10 cars depending on time of day and demand. BART will extend its service to Warm Springs in 2015 and to San Jose in 2018 and to east Contra Costa County via eBART in 2016. BART is also proposing early phases of its “BART Metro” project (that increases Transbay Tube/SF frequency) and to introduce higher-capacity train cars within the next 5-10 years. BART is also performing a study to recommend measures to increase platform and station circulation capacity, particularly at Embarcadero and Montgomery Stations. The BART system map is illustrated below.

3.2.2 Ferry Building

WETA, Blue & Gold, and Golden Gate operate regular ferry service between the San Francisco Ferry Building (2 miles from the project site) and Vallejo, Larkspur, Sausalito, Tiburon, Oakland, Alameda and South San Francisco. Golden Gate and WETA also provide event-level service to AT&T Park, 2/3 mile from the project site. The Ferry Building is also a terminal / hub for Muni and Amtrak/Amtrak Capital Corridor service.

A Mission Bay ferry terminal near 16th Street has been identified in Water Emergency Transportation Authority (WETA) and MTC’s 2040 Regional Transportation Plan “One Bay Area” planning documents as a potential future infrastructure investment, but there has not yet been an environmental assessment or full-funding strategy identified for the project. WETA plans to continue developing this concept.

3.2.3 Caltrain (Regional)

Caltrain provides passenger rail service on the Peninsula between San Francisco and Downtown San Jose with several stops in San Mateo and Santa Clara Counties. Limited service is available south of San Jose. Within San Francisco, Caltrain terminates at a station located on 4th Street between King and Townsend Streets, approximately 2/3 mile from the proposed Event Center Development site. The 4th/King station is served by local, limited, and “Baby Bullet” trains. The 22nd Street Station is also nearby, located directly underneath I-280, approximately one mile from the Event Center Development site, and is served by local, limited, and a few of the currently scheduled “Baby Bullet” trains.

Caltrain service headways in the northbound direction during the PM peak, which will serve Event Center weekday events, are variable depending on the specific service provided by the train (bullet or limited); however, there are typically 5 arrivals in one hour. Southbound headways after the PM peak are once per hour. Electrification of Caltrain by 2021 will allow implementation of increased train frequencies. On weekends, headways are once per hour, so most Event Center attendees will likely arrive in a single train. However some guests may come on an earlier train for weekend events to visit the city or the retail and restaurant uses on site. Finally, Caltrain currently provides special post-game train service following Giants games.

3.2.4 San Francisco Muni (Local)

Muni operates bus, cable cars, streetcars, and light rail lines within San Francisco. The line that most directly serves the proposed Event Center Development site is the T 3rd Street light rail line, which operates in a dedicated right-of-way in the center of 3rd Street. A couple of Muni bus lines, the 22 Fillmore and 10 Townsend, as well as the N Judah light rail line stop within 1 mile of the project site. **Figure 3-1** shows rail lines and **Figure 3-2** shows bus lines that provide service in the immediate project vicinity.

T 3rd Street – The T 3rd Street light rail route connects Visitacion Valley to Mission Bay via Bayview and Dogpatch. It also connects Balboa Park BART Station to Mission Bay through Downtown San Francisco as the K Ingleside route via St Francis Wood, West Portal, and the Castro. It operates weekdays and weekends from approximately 4:00 AM to 1:00 AM, mostly with one-car trains using platforms that are typically long enough for two car-trains in the vicinity of the Event Center. This line will be diverted to the Central Subway in 2019, will regularly be served by 2-car trains at a higher frequency than current scheduling north of Mariposa Street, and its UCSF Mission Bay station is located at the northwest corner of the project site.

The T 3rd Street line stops at side-running raised platforms located along 3rd Street at the following locations:

- Inbound/Outbound far-side curbside stops at South Street (at the northwest corner of the site)
- Inbound/Outbound far-side curbside stops at Mariposa Street (1/4-mile south of the site)
- Inbound/Outbound far-side curbside stops at 20th Street (1/2 mile south of the site)
- Inbound/Outbound far-side curbside stops at Mission Rock Street (1/3-mile north of the site)

In addition, all other Muni light rail lines and several east-west Muni bus lines overlap the T 3rd line at the Downtown stations, including the Embarcadero BART/Muni Station and other Market Street Muni bus/rail hubs that are within 2 miles away. Event-goers coming from other parts of San Francisco can transfer to the T 3rd line. Within five years, Muni expects to operate enhanced transit service described in the TEP, which could include the T 3rd and the 22 Fillmore trolley bus rerouted to run along 16th Street east of I-280 to Terry François Boulevard, with a more near-term plan to operate a Muni 55 motor coach line between the 16th Street BART and the Event Center until the trolley bus extension can be completed. The Muni 33 line may be extended to

serve the segment in Potrero Hill currently served by the 22. Two new Muni Bus Rapid Transit corridors (Van Ness and Geary) will have at least one of the programmed lines terminate within 2/3 mile of the project site within the next 5-8 years. Lastly, many major Muni bus lines have current terminus stations at the Temporary Transbay Terminal, Caltrain Terminal and Ferry Building (see below).

3.2.5 Mission Bay TMA Shuttles

The Mission Bay Transportation Management Association (TMA) strives to reduce single-occupant vehicle trips by encouraging alternative modes of transportation for residents, employees and visitors to the Mission Bay development area. Mission Bay TMA currently provides two shuttle bus route services (east and west) between Mission Bay and the Powell Street BART Station and the 4th/King Caltrain Station. They are free of charge and open to all employees, residents, and visitors to the Mission Bay Area and the China Basin building at 185 Berry Street. The west route serves 16th and Illinois streets, while the east route serves 4th Street and Mission Bay Boulevard; both operate at 15-minute intervals from 7:00 to 10:00 AM and 3:45 to 8:15 PM. Figure 3-2 shows TMA Shuttle routes and existing stops.

The Golden State Warriors will join the Mission Bay TMA and the shuttles will be made available for employees and visitors. According to the Mission Bay TMA, the evening service is currently at or near capacity. After joining the TMA, shuttle routes, stops, and schedules may be reconfigured to better serve the site and Mission Bay. A new stop to serve the site is suggested on the south side of South Street near the intersection with 3rd Street.

If the Warriors choose to fund incremental event-only shuttle service in partnership with the TMA, such service would be supported exclusively by the Warriors and limited to event attendees.

3.2.6 UCSF Campus-to-Campus Shuttles

UCSF provides shuttles for university personnel, including faculty, staff, technicians, and students, to travel between the university's campuses in San Francisco. These shuttles relieve capacity constraints for both the Mission Bay TMA shuttles and the road network via a reduction in single-occupant vehicle trips. Non-university affiliated personnel in the neighborhood are not permitted to ride UCSF shuttles.

3.2.7 Temporary Transbay Terminal

The Temporary Transbay Terminal provides temporary bus terminal facilities during construction of the new multi-modal Transbay Transit Center, which is scheduled for completion in 2017. The Temporary Terminal is located in the area bounded by Main, Folsom, Beale and Howard Streets, approximately 1.75 miles north of the project site. It currently serves AC Transit, WestCAT Lynx, Muni, Golden Gate Transit, and SamTrans passengers.

The new Transbay Transit Center will be located in an area bounded by Beale Street, 2nd Street, Minna Street, and Natoma Street and will serve the same transit providers as the Temporary Terminal plus capacity to accommodate Caltrain expansion and California High Speed Rail. Phase I of the project is expected to be completed by 2017.

3.3 BICYCLE FACILITIES

Bicyclists may use all roadways in the city, not just designated bicycle routes; however, the City of San Francisco has an extensive bicycle network. The three classes of bicycle facilities are described below.

Class I (Multi-use paths) are paved multi-use facilities separated from roadways. The City of San Francisco has Class I facilities in large parks (e.g., Golden Gate Park or the Panhandle) and in areas where bicycling on the street would be challenging (e.g., US 101/Cesar Chavez Interchange).

Class I facilities are generally shared with pedestrians and may be adjacent to an existing roadway, or may be entirely independent of existing vehicular facilities.

Class II (Bicycle Lanes) are striped lanes on roadways designated for use by bicycles through striping, pavement legends, and signs.

Class III (Bicycle Routes) are designated roadways for shared bicycle/vehicle use indicated by signs only; may or may not include additional pavement width for cyclists. The majority of San Francisco's bicycle facilities are Class III facilities. In San Francisco, Class III Bicycle Routes are routinely striped with the shared-lane arrow, or "sharrow," reminding drivers and cyclists to share the roadway.

Current on-street bicycle facilities in the vicinity of the project are shown in **Figure 3-3** and described below. The majority of the study area is flat, with limited changes in grade, facilitating bicycling within and through the area. However, dedicated bicycle lanes are not provided on all routes. For a description of planned bicycle projects which will add key links to the existing network including the Blue Greenway on Terry François Boulevard, refer to section 1.3.2.

The Bay Trail, described above, connects China Basin to Mission Bay across the Channel and runs along bicycle route #5. Additionally, the Embarcadero Enhancement project, now underway proposes to develop a conceptual design and cost estimate for a bikeway - a bicycle facility that is physically separated from moving or parked vehicles and pedestrians - along The Embarcadero from 3rd Street in South Beach to Powell and Jefferson Streets in the Fisherman's Wharf area. A bikeway is a bicycle facility that is physically separated from moving or parked vehicles and pedestrians. The SFMTA proposes to study a bicycle connection across the Lefty O'Doul Bridge that would connect the two waterfront bicycle facilities.

Route #5 runs north to south along Terry François Boulevard and Illinois Street as a Class II bike lane. This route connects China Basin to the north with the project site and Route #7 to the south.

Route #536 is a two-block section of northbound sharrows on 3rd Street between Terry François Boulevard and Townsend Street.

4th Street is a north-south bike route that extends from Berry Street to the north to 16th Street. 4th Street is designated as a Class III bicycle facility as it crosses Mission Creek until Channel Street, south of which it has Class II bike lanes.

Route #7 is primarily a north-south bike route that runs along Indiana Street as a Class III facility. At Mariposa St to the north, it merges with Route #23 and runs to the east to Illinois Street, where it continues north to the Event Center site. This route connects to Route #23 to the west as well as Route #5 and the Bay Trail to the east.

Route #23 is primarily a north-south bike route that extends along 7th Street from Brannan Street to 16th Street and down Mississippi Street to Mariposa Street with Class II bike lanes. At Mississippi Street and Mariposa, it runs east along Mariposa Street as a Class III facility and merges with Route #7.

Route #123 is a short north-south bike route that runs along Henry Adams/Kansas Street between Division Street and 16th Street as a Class III bicycle facility. It connects Routes #36 and #40.

Route #36 is an east-west bike route that runs along Townsend Street between The Embarcadero and 8th Street as a Class II bike lane. It connects the Caltrain Station at 4th and King Streets with Routes #23 and #123 to the west.

Route #40 is an east-west bike route that runs along 16th Street from Kansas Street to 3rd Street as a Class II bike lane. It continues for less than a block as a Class III bike facility from 3rd Street to the project site at Illinois Street. This route connects Route #25 and #123 to the west with Routes #23, 4th Street, and the project site to the east. Route #40 is planned to be moved to 17th Street between Kansas and Mississippi Streets before returning to 16th Street, where it will continue to Terry François Boulevard.

There is currently a **Bay Area Bike Share** (BABS) pod at the Caltrain Station and on Townsend Street between 7th and 8th streets, and at least one planned in the Mission Bay neighborhood near the UCSF residences. The Warriors are exploring locations for a new bike share station at or immediately adjacent to the Event Center or Bayfront Park.

3.4 STREET NETWORK

Since the Event Center Development site is located at the eastern edge of the Mission Bay neighborhood, the street network serving it extends to the north, west, and south only. The project proposes to restripe the roads adjacent to the Event Center Development frontage, as discussed in more detail previously in Chapter 2.

3.4.1 Local Access

This section describes the existing streets that are most relevant for access to the immediate vicinity of the site and discusses their relevance for particular modes as appropriate.

16th Street is a four-lane east-west Secondary Arterial roadway with left turn pockets that extends to Castro Street to the west and currently terminates at Illinois Street in the east. Upon build out, 16th Street will continue along the south border of the project site to Terry François Boulevard. East of Illinois Street and along the majority of the corridor within the study area, on-street parking is prohibited on both sides of the street. On-street parking is currently allowed on both sides of the street between 3rd Street and Illinois Street. Muni line 22 currently runs along the length of 16th Street west of Kansas Street. Interim Muni line 55 is proposed to run along 16th Street to 3rd Street. Bicycle Route 40 is a Class II route that runs along 16th Street between 3rd and Kansas streets. Future plans will extend the route east along 17th to Mississippi where it will return to 16th Street. Sidewalks are generally provided on at least one side of the road within the study area (on the south side of the road to the east of 3rd Street and on the north side of the road west of 3rd Street). On-street bike lanes are planned along 16th Street between 3rd Street and Terry François Boulevard.

South Street borders the project to the north and runs for one block from Terry François Boulevard to 3rd Street. It is a four-lane road that transitions to a pedestrian plaza, Gene Friend Way, to the west of 3rd Street. Parking is prohibited on both sides of the street and wide sidewalks are provided on the north side. No bicycle facilities are provided on South Street.

3rd Street is a four-lane north-south roadway that extends from Market Street to Bayshore Boulevard. It is designated as a Primary Transit Important roadway in San Francisco's General Plan. Near the Event Center site, on-street parking is prohibited on both sides of the street. 3rd Street is designated as a Class III bike route with sharrows between King Street and Terry François Boulevard in the northbound direction only. The T 3rd Street light rail line operates along 3rd Street between Channel Street and Bayshore Boulevard along a physically separated median in the roadway. During peak events at AT&T Park, vehicle capacity across the 3rd Street Bridge is reduced to one lane in each direction to accommodate surges in pedestrian activity around the park.

Terry François Boulevard is primarily a four-lane road that runs north-south from Mission Rock Street to 3rd Street and borders the project site to the east. The road transitions to a two-lane road north of Mission Rock Street, where it curves to the west to its terminus at 3rd Street. Terry François Boulevard is part of the Bay Trail and Bicycle Route 5 (Class II in both directions). On-street parking is generally permitted on both sides of the street, except along the frontage of Pier 48 and Pier 50. During events at AT&T Park, Terry François Boulevard is closed to vehicle traffic from 3rd Street to Pier 48. The proposed Blue Greenway project will add a two-way bikeway along the east side of the street with a 4-foot buffer. As part of the Blue Greenway project, Terry François Boulevard will be realigned to create a regular block shape for Blocks 30 and 32 and to maximize the size of the Bayfront Park. The four travel lanes and on-street parking lanes on both sides will be maintained.

Bridgeview Way is a privately managed, narrow two-lane road that runs from South Street directly across from the north parking entrance for the Event Center Development, to China Basin Street. Parking is prohibited on

both sides of the street and sidewalks are provided on both sides along the entire stretch. This road provides internal access and circulation for the residential and office uses along the corridor.

Illinois Street is a two-lane road that runs north-south from Cargo Way to 16th Street at the south parking entrance to the Event Center Development. Through the project area, parking is permitted on both sides of the street and the majority of the road. Parking is prohibited on the west side of Illinois between Mariposa and 18th streets during the post-event period when there are events at AT&T Park. Illinois Street also serves as Bicycle Route 5, with Class II facilities in both directions. Parking is prohibited on the west side of Illinois between Mariposa and 18th streets during the post-event period when there are events at AT&T Park.

4th Street is a two-lane north-south Primary Transit Important roadway that extends from Market Street to 16th Street. On-street parking is provided on both sides of the street. 4th Street is designated as a Class III bike route as it crosses Mission Creek, after which it transitions into Class II bike facilities (bike lanes) between Channel Street and 16th Street. The T 3rd Street light rail line operates on 4th Street between King Street and Channel Street. The 4th Street Bridge is closed to northbound traffic except transit, taxis and bikes during the post-event period for AT&T Park events. As part of the Mission Bay Redevelopment Plan, 4th Street will extend south of 16th Street to access a new UCSF hospital facility, but will not connect through to Mariposa Street.

7th Street is a two-lane north-south Secondary Arterial roadway that extends from Market Street to 16th Street. On-street parking is provided on both sides of the street between Irwin Street and 16th Street. 7th Street has Class II bike facilities between Brannan and 16th streets.

Mission Bay Boulevard North and South are a one-lane one-way east-west couplet Local Street that extends from Terry François Boulevard to 4th Street; right-turn only lanes are provided at intersections. It is located at the northern edge of the Mission Bay campus site and will be eventually extended to connect to the Mission Bay Circle in the future, located approximately 1,300 feet to the west, as part of the Mission Bay Redevelopment Plan. On-street parking is provided on the north side of the Mission Bay Boulevard North.

King Street is a five to six-lane Primary Transit Important east-west roadway that connects to the terminus of I-280 approximately 2/3 mile north of the project. The Muni line T 3rd Street operates in the median along King Street between The Embarcadero and 4th Street, where it continues down 4th Street to the Event Center site. AT&T Park, home of the San Francisco Giants, is located on King Street between 2nd and 3rd Streets. Caltrain has its terminus station on 4th Street between King and Townsend Streets. Although King Street is not directly adjacent to the Event Center Development project site, it plays a major role in providing access to and from the site. King Street is closed in eastbound direction between 3rd and 2nd streets during post-event period for AT&T Park events.

Berry Street is a two-lane east-west Local Street that extends from 3rd Street to Owens Street. Berry Street operates as an eastbound one-way street between 3rd and 4th Streets. On-street parking is provided primarily on the south side, though there are some areas that have on-street parking on both sides of the street.

Channel Street is a four-lane east-west Local Street that currently extends from west of 4th Street to 3rd Street. On-street parking is prohibited on both sides of the street between 3rd and 4th Streets, and permitted west of 4th Street. The T 3rd Street rail line operates on Channel Street between 3rd and 4th streets within a physically separated median in the roadway. Channel Street will be extended to the Mission Bay Circle in the future, as part of the Mission Bay Redevelopment Plan.

Mission Rock Street is a two-lane east-west Local Street that extends from Terry François Boulevard to 4th Street. On-street parking is provided on both sides of the street for most of the length, but is not available east of 3rd Street.

Mariposa Street is a two-lane east-west Local Street that extends from Illinois Street to Harrison Street. During special events, parking is prohibited to provide four travel lanes. The I-280 on- and off-ramps (southbound and northbound, respectively) are located immediately east of the intersection of Pennsylvania and Mariposa streets. The intersection of Mariposa Street and Fourth Street serves as a major access point to the UCSF hospital facilities currently under construction. Both sides of the street provide on-street parking. In addition, Mariposa Street is a designated Class III bike route with sharrows between Illinois Street and Mississippi Street. Mariposa Street will be widened to five lanes between 3rd Street and I-280 prior to opening of the Event Center.

Owens Street is a north-south roadway that runs from 16th Street north to a future roundabout, where it continues to the west until it runs into Mission Bay Drive. It operates as a two-way street with one travel lane in each direction. There are no Muni routes or bicycle designations on Owens Street. Owens Street sidewalk widths within the study area are generally adequate. Owens Street will be extended south to Mariposa Street and will connect with the I-280 off-ramp at Mariposa.

3.4.2 Truck Access

Major truck routes in Mission Bay are along I-280, King Street, Mariposa Street, 16th Street, and 3rd Street. These routes are illustrated in **Figure 3-4**. Primary truck access to the project site will be along Mariposa Street to Illinois Street, where direct access to the parking garage will be provided at the Illinois Street / 16th Street intersection. Secondary truck access to the site will be along Cesar Chavez Street to Illinois Street. Truck access to and circulation throughout the Event Center Development site is explained in further detail in Chapter 7.

-  No Thru Truck Traffic

Not to Scale

3.5 REGIONAL TRAFFIC

Interstate 80 (I-80): I-80 provides the primary regional access by car from the East Bay to the project area. It connects to the East Bay and other major freeways (I-580 and I-880) via the San Francisco-Oakland Bay Bridge. Within San Francisco, I-80 generally has eight lanes (four lanes in each direction). On- and off-ramps serving the site are located as follows:

- Off-ramps:
 - Westbound: Harrison Street at 5th Street; 8th Street at Harrison Street
 - Eastbound: 4th and Bryant, 7th and Bryant
- On-ramps:
 - Eastbound: Bryant Street between 1st and 2nd Streets; Essex Street at Harrison Street; , 1st Street at Harrison Street, 8th Street
 - Westbound: 7th Street and Harrison, 4th and Harrison

Interstate 280 (I-280): I-280 provides the primary regional access by car from the South Bay and the Peninsula to the project site and is generally a six-lane freeway. There is a freeway interchange between I-280 and **Highway 101** (US 101) approximately 2.5 miles south of the site. US 101 also provides access to Cesar Chavez Street south of the site and Vermont Street west of the site. I-280 has a terminus (both on- and off-ramps) at 4th and King Streets, adjacent to the Caltrain Station, which results in the need to ensure safe pedestrian circulation at that intersection. The closest on- and off-ramp serving the site for southbound and northbound I-280 traffic is at Mariposa Street. Drivers will be encouraged to also use the ramp at Cesar Chavez St/Pennsylvania Avenue to reduce the impacts on the ramps before and after a peak event and distribute traffic more efficiently. On- and off-ramps serving the site are located as follows:

- Off-ramps:
 - Northbound: Cesar Chavez Street; Mariposa Street; 5th Street / King Street (terminus)
 - Southbound: 18th Street / Pennsylvania Avenue; Cesar Chavez Street / 25th Street
- On-ramps:
 - Northbound: 25th Street; 18th Street;
 - Southbound: 5th Street / King Street (terminus); Mariposa Street; Cesar Chavez Street

Regional auto traffic will seek parking in locations close to the Event Center. A total of 8,290 parking spaces exist in the area between the Event Center and I-280/King Street to the west and north. This includes 4,690 spaces in parking structures and 3,590 spaces in surface lots. Major parking facilities in the area include Lot A (2,300 space surface lot), the 1,400 space structure at 450 South Street, the 730 space UCSF garage at 3rd Street and Campus Lane, a 500 space structure at 499 Illinois Street, and an 800 space structure located behind 1650 Owens Street.

CHAPTER 4. TRAVEL DEMAND MANAGEMENT

The purpose of the strategies described in this chapter is to increase the level of access to the project by transit, bicycling and walking while discouraging the use of private automobiles, particularly by solo drivers. The strategies identified in this chapter will be reviewed and refined both during the Event Center's first year of the project's completion and as new transportation facilities are developed in the project vicinity.

4.1 GENERAL TRANSPORTATION MANAGEMENT STRATEGIES

Measures that will be implemented to support all public transit, bicycle, and automobile reduction strategies include:

1. Designate a TMP coordinator to: develop and implement marketing/communications/incentives programs, and coordinate with facility and tenants on policies and capital needs to support sustainable trip making by employees and event center visitors.
2. Develop means of in-building, on-site, and/or neighborhood communication (radio, TV, smart phone app, etc.) that give Event Center, office, or retail users multiple, real-time advisories about the status of the transportation system and event schedule to facilitate convenient transportation choices. Information provided may include availability of public transit and shuttle bus service, location and capacity of bike parking facilities, best walking paths, location of taxi stops, and limited extent of – or high price for – available parking.
3. Develop a crowd-sourced app that puts information on all transportation modes in the hands of event attendees with smart communication devices. This real-time information on travel conditions and travel times by mode will lead to a transportation system that will become increasingly more user optimized. The app may also be equipped to send notifications about event times and traffic conditions. The app will be free and available to anyone who wishes to download it, and will be useful for anyone working, living, or visiting the Mission Bay Area.
4. Provide extensive use of real-time transit info in public assembly areas that reflect the range of transit services in the area.
5. Install a machine to add value to Clipper Cards on-site.
6. Establish an annual TDM budget for all components of the TDM program applying to GSW employees and event center visitors.

4.2 EMPLOYEE TDM

The strategies described below are designed to reduce employee auto mode share.

4.2.1 Employee Public Transit Strategies

1. Participate in and promote pre-tax commuter benefits, a federal program that allows employees to reduce their commuting costs by up to 40 percent using tax-free dollars to pay for their commuting expenses.
2. Contribute to the Mission Bay TMA shuttle program; designate priority curbside areas on-site for TMA shuttles.

3. Promote use of Mission Bay TMA shuttles to employees; notify them that they are eligible to ride the Mission Bay TMA shuttles, and provide information about routes, stop locations, and schedule.

4.2.2 Employee Bicycle Strategies

1. Provide indoor secure bicycle parking facilities for employees.
2. Provide shower and locker facilities for employee use.
3. Promote use of the indoor bicycle valet facility (approximately 300 bike spaces) (available to Event Center and GSW employees only during non-event hours and days).
4. Sponsor a Bay Area Bike Share station in the project vicinity.
5. Encourage all employees and visitors to participate in public events that promote bicycling such as the annual "Bike to Work" day.

4.2.3 Employee Automobile Reduction Strategies

Measures that will be implemented to reduce the effects of employee vehicular traffic include:

1. Enroll in free-to-employees ride-matching program through www.511.org.
2. Enroll in free-to-employers Emergency Ride Home program through the City of San Francisco (www.sferh.org).
3. Designate parking spaces for carpool/vanpool participants.
4. If applicable, comply with California's parking cash-out program.
5. Organize and publicize community efforts, such as Spare the Air days (as declared for the Bay Area region) or a Rideshare Week.
6. Encourage tenants to allow certain employees to work flexible schedules and telecommute, to the extent reasonable.

4.2.4 Additional Strategies

1. Identify potential tenants who may provide on-site amenities (such as fitness and exercise centers, food and beverage options, and/or automated banking resources) to encourage employees to stay on-site during the work day.

4.3 EVENT CENTER PATRON TDM

The strategies described below are designed to limit event patron auto mode split for peak-event travel (6:00 PM – 8:00 PM) to no more than 53 percent (weekday) or 59 percent (weekend). They should also reduce auto mode split for retail, restaurant, and other site visitors where applicable.

4.3.1 Patron Public Transit Strategies

Measures that will be implemented to increase the use of public transit among guests include:

1. Work with the City to identify arena event patrons arriving via transit and reward those patrons with promotional incentives that may include discounted food or beverage, team or venue merchandise, raffle entry, access to a “fast-track” security line or one or more other options. Market these incentives with a robust communications strategy prior to an event day so that guests can make choices accordingly.
2. Distribute GSW-branded Clipper Cards to encourage patrons to associate event attendance with transit usage during attendee’s trip planning process.
3. Work with the SFMTA to determine the market feasibility and benefits of bundling the cost of a roundtrip Muni fare into the cost of all ticketed events.
4. Encourage customers at point of ticket purchase to use sustainable modes via communications on the internet and through the ticket vendor.
5. Work with the SFMTA to brand transit stops/stations near the project site, covering any costs associated with re-branding. Utilize TVs and other screens inside the Event Center building to display real time transit information and prominent comparisons between transportation choices available to fans, employees, and visitors to the Event Center Development. Emphasize transit’s lower-cost, higher sustainability, and other beneficial factors as compared with private autos.
6. Play recorded announcements during halftime (for games) or between opening and main acts (for concerts), and as Event Center attendees exit the building, to notify guests of non-auto travel options home, including real time transit and shuttle departure times.
7. Provide additional communication of transit options and wayfinding during playoff games for non-season pass holders who may be coming from out of town by providing information to, and coordinating displays within, hotels and local businesses in the Event Center vicinity

4.3.2 Patron Bicycle Strategies

Measures that will be implemented to increase the frequency and convenience of biking among Event Center patrons include:

1. Promote use of the indoor bicycle valet facility (approximately 300 bike spaces) on 16th Street. Identify and reward patrons of the bike valet with promotional incentives that may include discounted food or beverage, team or venue merchandise, raffle entry, access to a “fast-track” security line or one or more other options. Market these incentives with a robust communications strategy prior to an event day so that guests can make choices accordingly.
2. If and when peak event bicycle storage demand exceeds the 300-space enclosed valet facility and on-site bike rack capacity, provide additional temporary outdoor bike valet parking areas.
3. Provide outdoor bicycle storage/racks for Event Center and office, retail, or restaurant visitors.
4. Sponsor a Bay Area Bike Share station in the project vicinity.
5. Encourage all guests to participate in public events that promote bicycling such as the annual “Bike to Work” day

6. Provide a bicycle map, showing routes to the Event Center development site, on the Event Center web site, mobile applications, and in event literature and advertisements, when appropriate.

4.3.3 Patron Automobile Reduction Strategies

Measures that will be implemented to reduce the effects of visitor vehicular traffic include:

1. If parking is not bundled with ticket purchases for arena events (i.e., select event days and types), charge market-rate fees for on-site parking in connection with such arena events. Encourage off-site parking partners to charge market-rate parking fees for all arena events.
2. Designate priority curb areas on-site for taxis, charter buses, and rideshare vehicles. Explore partnership options with rideshare/carpool/TNC companies to offer discounts to event attendees and other visitors and/or employees.

4.3.4 Patron Communication Strategies

1. Design a “Getting There” page for the venue website that lists multi-modal options and comparisons before showing preferred driving routes or available parking.
2. Promote transit access to project by providing: interactive trip-planning tools, transit maps, with recommended stops/stations for accessing site and best routes to the Event Center; and walking directions from transit stations/stops. Promote transit information on Event Center web site, mobile apps, on websites of events taking place at the site (to be required as a standard part of event contract), and in event literature and advertisements, when appropriate.
3. Provide real-time transit information, including train or bus arrivals and departures, in key Event Center locations (exit areas, gathering areas, etc.), inside the building (on TVs and other screens), and/or via mobile applications.
4. Make available additional communication of transit options and wayfinding during playoff games for non-season pass holders who may be coming from out of town by providing information to, and encouraging displays within, hotels and local businesses in the event center vicinity.
5. Create schedules of upcoming events for display on electronic message boards, to discourage auto use and parking in the Event Center vicinity.

4.3.5 Additional Strategies

1. Identify potential tenants who may provide on-site amenities (such as food and beverage options, and/or automated banking resources) to encourage Event Center patrons to stay on-site for longer post-event periods.

4.4 SPECIAL EVENT TRANSIT SERVICE PLAN

This section summarizes a preliminary Transit Service Plan (TSP) for the Warriors Event Center and Mixed Use Development as outlined by the SFMTA in a presentation on October 1, 2014.

4.4.1 Service Plan Objectives

The key objective for the TSP is as follows:

- Provide high quality service to event goers, without affecting service reliability for other Muni customers
- Accommodate a 35 percent transit mode share for peak event trips
- Develop a service plan that maximizes existing infrastructure and prioritizes operations efficiencies
- Develop a service plan adequate for peak event ridership volumes that is also scalable for small and medium events

4.4.2 Service Plan for Peak Event

The majority of regional transit riders will use Muni as a last-mile connection to the Event Center Development. Most Muni passengers will travel on the T 3rd southbound pre-event, and northbound post-event. The T 3rd service pre-event is expected to have excess capacity, while post-event excessive capacity will not be allocated from regular service, but rather will be served from additional trains and supplemental routes. The T 3rd service will be supplemented with bus service to respond to distributed customer demand, to minimize transfers made, and to minimize rail car demand. **Inset 4-1** shows proposed routes for each of the supplemental shuttles. Supplemental bus routes include:

- T 3rd Supplemental Service
- Metro Shuttle via The Embarcadero
- 16th Street BART Station Shuttle
- Van Ness Avenue Shuttle
- Ferry Building / Transbay Terminal Shuttle

Inset 4-1 Supplemental Shuttle Routes

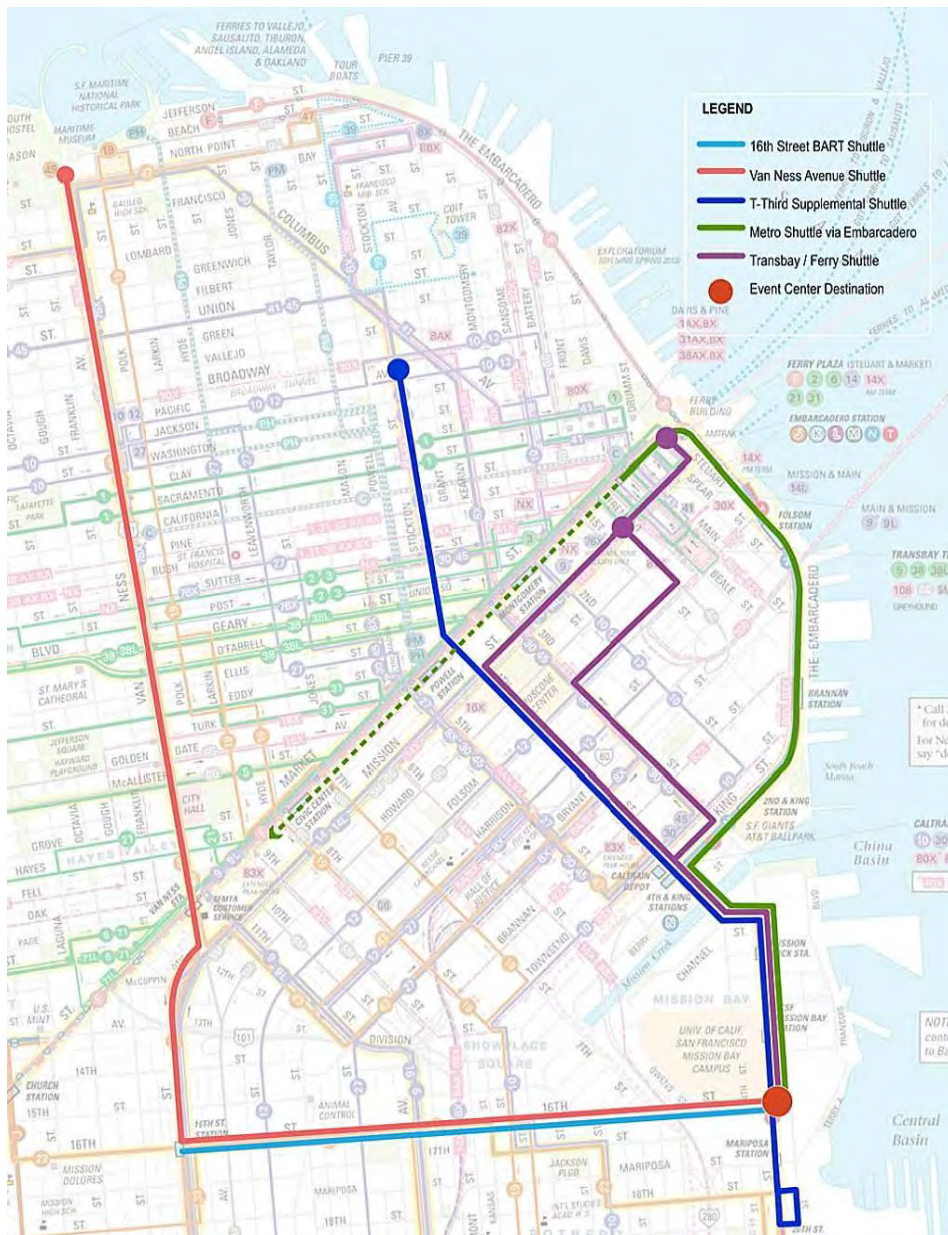

Table 4-1 summarizes the fleet of shuttle buses and light rail vehicles necessary for pre- and post-event scenarios.

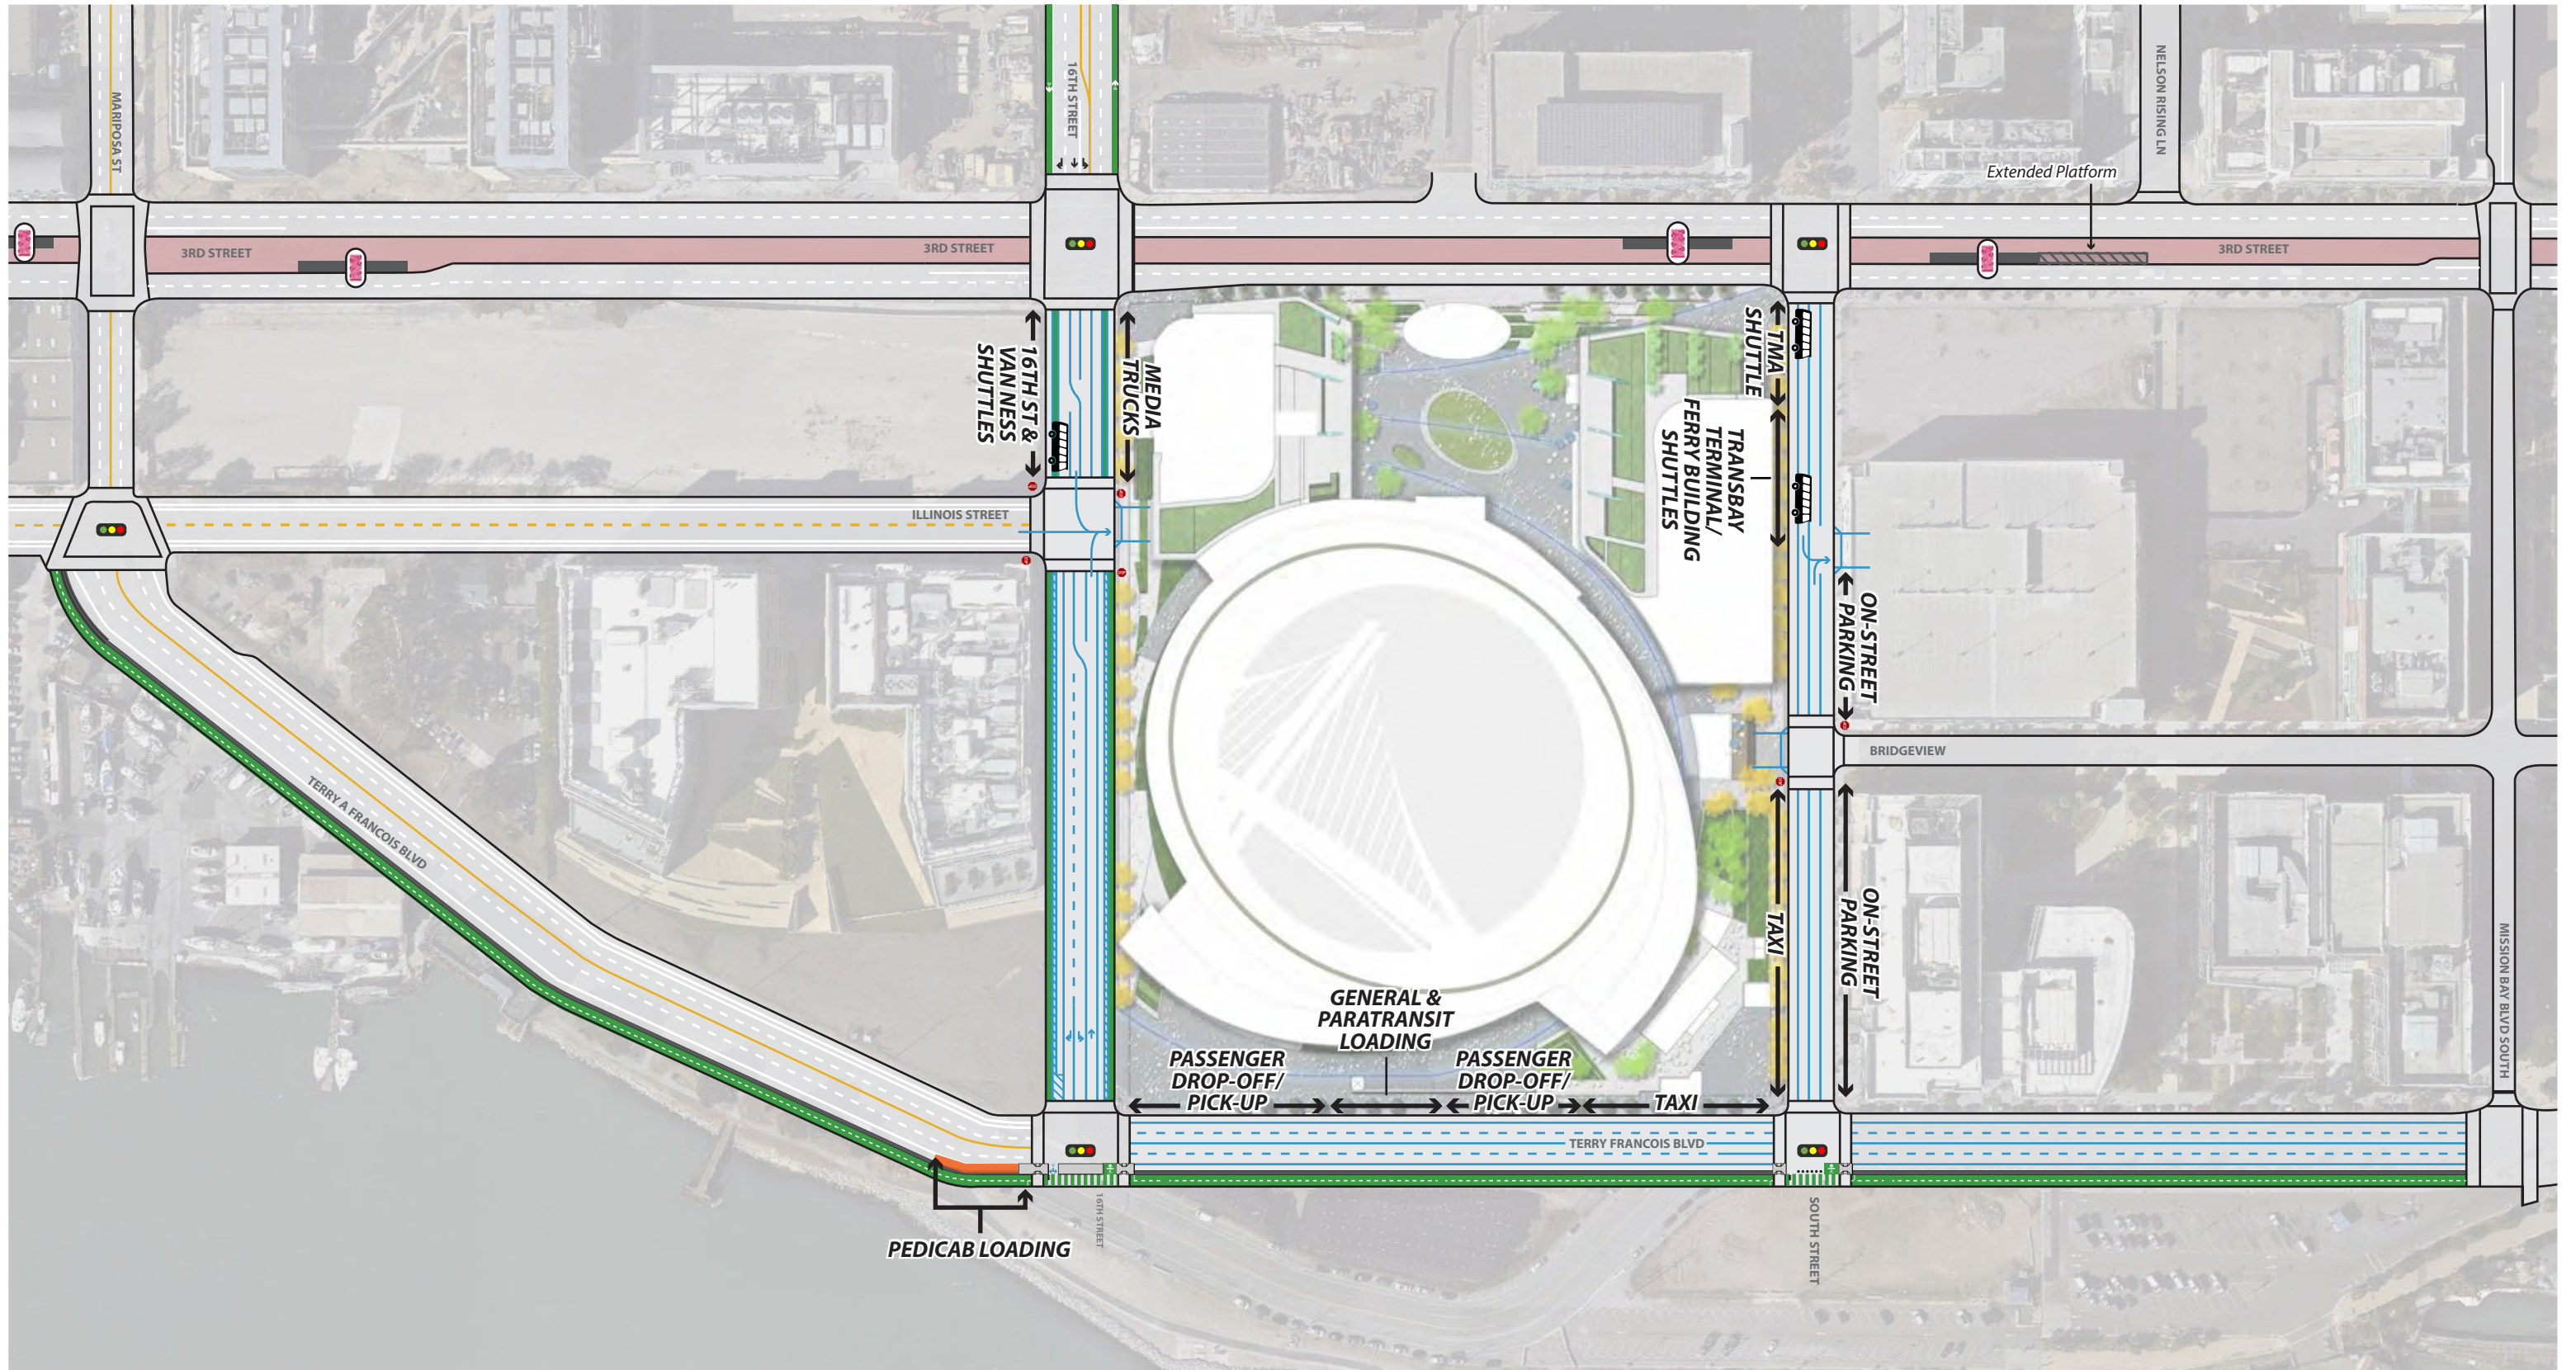

Figure 4-1 shows the pre-event shuttle plan, including stop locations at the site. Figure 4-2 shows the post-event shuttle plan; including shuttle stop locations, staging areas, and temporary lane closers, which are discussed in more detail in Chapter 6.

TABLE 4-1: PRELIMINARY TRANSIT SERVICE PLAN FOR PEAK EVENT²

SERVICE	FLEET NECESSARY	
	Pre-Event	Post-Event
T 3 rd Supplemental Service	4 two car trains between Chinatown and Mission Bay Loop combined with 4 minute scheduled subway service	10 two car trains staged to clear event
Metro Shuttle via The Embarcadero	None – limited car availability	2 three car trains staged to clear event
16 th Street BART Station Shuttle	4 articulated motor coaches operating between 16 th Street BART and the arena every 7-8 minutes	4 articulated motor coaches + 1 standard motor coaches operating between 16 th Street BART and the arena staged to clear event with half of vehicles returning for a second trip
Van Ness Avenue Shuttle	5 standard motor coaches operating every 12 minutes along the Van Ness corridor to arena via 16 th Street	4 standard motor coaches operating to the Van Ness corridor via 16 th Street staged to clear event
Ferry Building / Transbay Terminal Shuttle	6 standard motor coaches operating every 10 minutes via Ferry Plaza and the Transbay Terminal to the arena	6 standard motor coaches operating to Transbay Terminal and Ferry Building Plaza staged to clear event

² The Transit Service Plan can also be modified and implemented to serve varying attendance size for small and medium events.

Not to Scale

CHAPTER 5. TRAVEL CHARACTERISTICS OF EVENT CENTER ATTENDEES AND SITE USERS

This chapter describes the travel characteristics of current Oracle Arena attendees and the assumptions for the new Event Center based on the analysis prepared by the SEIR Team (as of December 2014), focusing on travel patterns typical of game days. For typical sequences of events on game and concert days, please see **Appendix A**. This Chapter is included in the TMP for contextual and informational purposes only. A full environment document will be prepared that includes a more complete and quantitative analysis of travel characteristics (i.e., projected mode split, intersection performance, parking demand, and traffic routing) as they pertain to transportation.

5.1 NBA EVENT ATTENDANCE LEVELS

The NBA regular Season consists of 82 games total with half of them played at the home Arena. Home games over the year would typically consist of the following:

- 2-3 pre-season home games;
- 41 regular season home games;
- 0-16 post-season home games (should the Warriors reach the playoffs, the minimum number of home games is 2 and the maximum is 16)

The monthly distribution of home games tends to be evenly spread at about 7 games/month over 6 months (November-April), with a typical month having 1-3 games on Fridays, 1-3 games on Saturdays, 0-1 game on Sundays, and 2-6 games on Mondays through Thursdays.

The capacity of the existing Oakland Arena is 19,596. Average attendance levels at home games over the last 10 years are summarized in **Table 5-1**.

TABLE 5-1: WARRIORS' HISTORIC GAME ATTENDANCE LEVELS BY YEAR

Season	Average Attendance	Occupancy
2012-13	16,831	86%
2011-12	16,749	86%
2010-11	16,399	84%
2009-10	14,884	76%
2008-09	17,573	90%
2007-08	18,120	93%
2006-07	16,024	82%
2005-06	16,173	83%
2004-05	14,471	74%
2003-04	14,370	73%

Source: GSW Attendance and Employment Memo (Feb. 7, 2014).

Based on the information above, games in many years have, on average, almost filled the Arena to capacity. As a result, the discussion and controls in the following sections are based on 18,064 attendees.

5.2 EVENT CENTER PATRON ARRIVALS

5.2.1 Trip Origins and Arrival Distribution

Table 5-2 summarizes the known origins of attendees who currently attend games at Oracle Arena and estimated origins of future attendees. As shown, it is anticipated that at the proposed new Event Center site, the breakdown of trip origins will shift considerably. It is anticipated that fewer attendees will come from the East Bay (33 percent vs. 53 percent) and that more attendees will come from San Francisco, the South Bay, and the North Bay.

TABLE 5-2: ORIGINS OF NBA EVENT ATTENDEES		
Origin	Origins for Current Oakland Arena Location ¹	Weekday Inbound Forecast Origins for San Francisco Location ¹
San Francisco	16%	29.3%
Super District 1	N/A	14.8%
Super District 2	N/A	4.6%
Super District 3	N/A	5.5%
Super District 4	N/A	4.4%
North Bay	7%	8.9%
East Bay	53%	31.1%
South Bay	24%	26.7%
Out of Region	N/A	4%

Notes:

1. Source: *Technical Memorandum – Travel, Parking and Loading Demand Estimates for the Proposed Event Center & Mixed-Use Development at Mission Bay Blocks 29-32*, March 2015.

Assuming the pattern is similar for the proposed Event Center site, it can be expected that patron arrivals at the Event Center will begin approximately 2½ hours prior to event start, peak during the ½ hour prior to event start, and continue after the event is under way. Approximately 70 to 80 percent of attendees are assumed to depart in the hour immediately after the event ends.

For other events at the Event Center (e.g. family shows, theatre events) the arrival and departure distributions times are different compared to the peak NBA game event. Although the attendance levels will be lower for such events, due to the nature of the event and the audience it attracts, it is much more likely that all guests will arrive prior to the start time and will stay until the end.

5.2.2 Pedestrian Arrivals

Most attendees will take transit or drive and park at nearby garages and lots, and then walk to the Event Center. Transit and auto trips to games make up approximately 90 percent of all trips. Regardless of their primary mode of travel, most guests will walk the final leg of their trip. Figure 5-1 illustrates the projected routes that

pedestrians will likely take as they walk from nearby transit stops/stations and the walking times associated with each route.

The main pedestrian entry points to the Event Center include the main plaza on the west side of the site with direct access from 3rd Street sidewalks, and the southeastern corner of the site with access from Terry François Boulevard, 16th Street, and the Bayfront Park. The majority of pedestrian traffic is expected to come from north of the site along The Embarcadero and the 3rd Street corridor, with its direct links to Market Street and major transit hubs. Some pedestrians walking from the Embarcadero may use Terry François Boulevard instead of 3rd Street. Upon completion of the Blue Greenway, Terry François Boulevard will become a much more attractive walking route to pedestrians coming to the site from the north or the south. The majority of pedestrians coming from the south and west are likely coming from nearby BART and Caltrain stations and will walk along 16th Street, 3rd Street, or Terry François Boulevard to the Event Center Development.

5.2.3 Transit Arrivals

Arrivals from Caltrain

Most attendees who choose to take Caltrain to the Event Center are expected to get off at the 4th & King Station (0.7 mile walk) during the peak pre-game hour, while a very few may choose to get off at the 22nd Street Station. On weekends, train headways are typically one per hour; thus, most attendees using Caltrain will likely arrive in a single train. However some guests may come on an earlier train for weekend events to visit the city or the shop at the retail and restaurant uses on site. On weekdays, 6-7 trains arrive between 6:00 and 7:00 PM. With future electrification, Caltrain anticipates an additional train per hour.

From 4th & King most pedestrians will cross King Street, walk along 4th Street, across the 4th Street Bridge to Channel Street, and finally along 3rd Street or Terry François Boulevard to the Event Center. Muni assumes that about half of Caltrain riders will get on the T 3rd at Caltrain and ride to the Event Center. Key intersections along pedestrian routes from Caltrain should be monitored to determine if additional traffic control is necessary.

Arrivals from UCSF Mission Bay Muni Platforms

Many event attendees coming from downtown San Francisco or BART or AC Transit or Golden Gate Transit will likely take Muni Metro (T 3rd Street Line) to the Event Center. Most Muni passengers are predicted to be coming from the north and will likely get off at the UCSF Mission Bay stop, located on 3rd Street south of South Street, approximately 500 feet away from the Event Center entry. Muni passengers coming from the south will either get off at the Mariposa Street stop and walk the remaining quarter mile to the arena, or will get off at the UCSF Mission Bay stop on 3rd Street north of South Street. To deter pedestrian crossings mid-block between South Street and 3rd Street, decorative fencing will be placed along the Muni transit right-of-way.

Because the UCSF Mission Bay platform will need to accommodate high volumes of pedestrians during the pre- and post-event period, the project will require the extension of the platforms at 3rd Street and South Street to provide longer, larger, and safer landing spaces for crowds. PCOs will also be positioned at key intersections and crossings to assist with safe pedestrian crossing and vehicle operations in the vicinity of the platforms during peak events. To deter pedestrian crossings mid-block between South Street and 3rd Street, decorative fencing will be placed along the Muni transit right-of-way.

Arrivals from Special Event Shuttles

Event attendees arriving from the Mission and 16th Street BART station or Van Ness shuttles will be dropped off along the south side of 16th Street, just west of Illinois Street. Pedestrian access to the Event Center will be provided at PCO-assisted crossings at either 3rd Street or Illinois Street. Transbay Terminal and Ferry Building shuttles will drop off patrons on the south side of South Street, just east of 3rd Street.

5.2.4 Bicycle Arrivals

Valet bicycle parking will be provided for peak events near the southeast corner of the site. A total of more than 300 attended, free, indoor valet bicycle parking spaces will be provided. Up to 200 additional bicycles (or more if demand exceeds this number) will be accommodated on game days through a combination of permanent independently accessible outdoor bike racks installed near on-site destinations and entries, and temporary staffed outdoor bike valet facilities. In addition, secure bike rooms located at grade in each office building will provide up to 80 total bicycle spaces for office users. The nearest bike share station is currently located at the 4th & King Caltrain Station, approximately 2/3 mile away, or a 15 minute walk. The project will sponsor a bike share station in the immediate vicinity of the Arena, likely along Terry Francois Boulevard.

Based on the mode splits for different events, the most bicycle traffic is expected during Saturday peak event days, resulting in approximately 250 bicycle trips, of which approximately half will arrive in the hour preceding game start. If all bicyclists choose to use the bicycle valet, then the bicycle valet will be nearly filled to capacity during most events.

Most bicyclists traveling north or south to the arena are expected to use the Terry François Blue Greenway when it is complete. Bicyclists traveling west to the arena are expected to use 16th Street. All bicyclists will be expected to walk their bikes across 16th Street or Terry Francois Boulevard at designated crosswalks to access the bike valet. Signage to direct this movement will be clearly displayed to ensure organized, safe movements of bicycles and to reduce conflicts with vehicles and pedestrians. Location and design of the bike valet and nearby landscaping will also direct the safe movement of pedestrians and cyclists.

Pedicabs, will be accommodated near the site, especially during peak events. Most pedicabs are expected to travel north/south to the site and are expected to use the Terry François Blue Greenway when it is complete. A pedicab staging area is proposed for the east side of Terry François Boulevard just south of 16th Street. This is consistent with the bicycle focus in the southeast corner of the site.

POTENTIAL PEDESTRIAN PATHS OF TRAVEL FROM REGIONAL TRANSIT

5.2.5 Taxis and Charter Buses

An evening NBA game is not forecast to attract more than 2-3 large charter buses on average³; however they may become more relevant or necessary to help meet auto mode share goals in the future. A charter bus zone will be located along the north side of 16th Street close to Terry François Boulevard for drop-off/pick-up activity during small events. A total of 500 feet of curb space (accommodating 6-8 buses at a time) will be available on the north side of the street between Illinois Street and Terry François Boulevard. No additional off-site staging for the buses is necessary or anticipated at this time.

While conventions are expected to draw a much smaller number of visitors, nearly half of all trips are forecast to be taken by shuttle bus or taxi.

A staffed taxi zone will be designated along the west side of Terry François Boulevard and along the south side of South Street for all events to ensure taxi maneuverability from the Event Center in all directions, especially post event, and to increase the attractiveness of taxi options for patrons exiting daily retail and restaurant uses on-site. Access for passenger drop-off/pick-up activity during concerts and peak events will occur in a separately designated curb space on the west side of Terry François Blvd. This zone will be managed to avoid vehicle conflicts with surrounding traffic. Drop-offs will be located on the west side of the street and will minimize conflicts with cyclists on Terry François Boulevard. During non-peak events, taxis would load along the Terry François Boulevard frontage.

5.2.6 Vehicle Arrivals at Event Center

The Event Center parking garage will have approximately 950 parking spaces. 500 spaces will be available for pre-purchase by designated ticketholders, and others may be shared-use spaces for daytime office employees and evening Event Center patrons. Based on the arrival pattern of Event Center attendees, most vehicles will arrive at the garage in the hour preceding game tipoff. Parking pass-holders will self-park in the garage after having their credentials checked. Garage management procedures are described in Section 2.1.3 and Chapter 6.

The main garage access will be located on 16th Street, creating a 4-way stop controlled intersection at Illinois Street. Pre-event vehicle access to the garage will be distributed to a northbound through movement from Illinois Street, an eastbound left-turn movement from 16th Street, and a westbound right-turn movement from 16th Street. The Illinois Street intersection with the garage entrance/exit will be controlled by an all-way-stop, except for before and after large events, where it will be controlled by Parking Control Officers (PCOs). Operations will be monitored at this and other locations, and additional controls (e.g. signalization) may be added if deemed necessary to minimize conflicts between pedestrians and bicycles on the sidewalk/multi-use path and the vehicles entering the garage or exiting the site vicinity.

The suggested pre-event driving routes are shown on **Figure 5-2**. These routes will be provided to attendees prior to an event (via website, email, app, etc.) to encourage effective distribution of arrival traffic. In order to maintain clear access to the UCSF Campus and UCSF hospital center, guests traveling from south of the project site will not be encouraged to use Owens St. en route to the Event Center. Likewise, guests traveling from the west or north of the site will be encouraged to use alternatives to 16th Street to reduce congestion during UCSF shift changes (primarily the night shift nurse arrival period from 6:30 PM to 7:00 PM). The pre-event routes shown are subject to revision based on monitoring during the first four years of operations.

³ Golden State Warriors.

Parking facilities shown on **Figure 5-2** are solely representative and do not pre-suppose third party agreements. The Warriors are exploring options for shared-use agreements to provide additional parking resources to guests and additional revenue to copious public and private lots in the vicinity. If parking demand is not met by supply in Mission Bay, the Warriors will secure agreements for satellite parking lots with transit or shuttle connections to the Event Center.

5.3 EVENT CENTER PATRON DEPARTURES

5.3.1 Trip Departure Distribution

For a weekend peak event, the distribution of event attendees to post-game destinations is forecast to be the same as the pre-game trip origin distribution, as summarized in **Table 5-2**.

The existing pattern of departures at the Oakland Event Center varies depending on game circumstances. In general, 30-40 percent of fans depart prior to the final buzzer while 60-70 percent stays through the end of the game. Periodically, there are also post-event activities that encourage some attendees to stay longer. The presence of retail uses on the San Francisco site provides incentives, which are not available in Oakland, for patrons to remain on site for a period of time after events. When this is the case, departure times are more spread out. Overall, the majority of departures occur over a shorter period of time than the 2-1/2 hour window of pre-event arrivals.

For the purpose of analyzing departures, the busiest post-game hour is the hour including the end of the game, when up to 80 percent of attendees will depart. This time period will require the highest level of traffic control given the concentration of pedestrian activity exiting the Event Center.

5.3.2 Pedestrian Departures

The main pedestrian exit points from the Event Center include the main plaza on the west side of the site with direct access to 3rd Street sidewalks and the southeastern corner of the site with access to 16th Street and Terry François Boulevard. Similar to pre-game conditions, pedestrians leaving the Event Center are expected to walk primarily along 3rd Street or Terry François Boulevard after the game, as illustrated in **Figure 5-1**. Event attendees will be directed to walk towards different exits depending on their mode of departure. Due to post-game distribution patterns, the volume of pedestrians leaving the Event Center post-game will be higher in the hour following a game than the volume arriving in the hour pre-game; following the first hour, the volume of pedestrians will drop significantly.

5.3.3 Transit Departures

Departures towards Caltrain

Attendees who will take Caltrain following game's end will most likely walk or take Muni to board at the 4th & King Station, and a small share of Caltrain riders are expected to board at the 22nd Street Station. It is likely that all attendees will board the same late service train, which may be provided by Caltrain specifically on event nights. SFMTA Parking Control Officers will be stationed at key intersections along pedestrian routes towards Caltrain to monitor these intersections and adjust controls as needed to ensure safe and efficient flow of all modes.

Departures towards UCSF Mission Bay Muni Platforms

Many event attendees departing towards downtown San Francisco, Caltrain, or BART will likely take Muni Metro (T 3rd Street Line) from the Event Center. Most Muni passengers are predicted to be leaving towards the north and will likely get on at the UCSF Mission Bay stop, located on 3rd Street at South Street, approximately 500 feet away from the Event Center Main Plaza. Muni passengers departing towards the south will likely get on at the Mariposa Street stop to avoid crowds at the closer UCSF Mission Bay stop. It is also predicted that some northbound passengers will walk south to the Mariposa Street stop to travel north in an attempt to avoid the

large crowds at the UCSF Mission Bay stop. To deter pedestrian crossings mid-block between South Street and 3rd Street, decorative fencing will be placed along the Muni transit right-of-way.

Because the UCSF Mission Bay platform will need to accommodate high volumes of pedestrians during the pre- and post-event period, the project will require the extension of the platforms at 3rd Street and South Street to provide longer, larger, and safer landing spaces for crowds. Departures will be more concentrated than pre-game arrivals, so Parking Control Officers (PCOs) will be stationed at all nearby Muni platforms. Both northbound lanes on 3rd Street will be closed between 16th Street and Mission Bay Boulevard South to accommodate the pedestrian flow exiting the Event Center. A portion of South Street will also be closed to prevent vehicle conflict with pedestrians at the intersection with 3rd Street.

Departures towards Special Event Shuttles

Event attendees departing towards the Mission and 16th Street BART station will be directed to the Muni staging area along Illinois Street. Event attendees departing towards Van Ness will be directed towards the shuttle stop located on the north side of 16th Street east of the garage driveway. Northbound Illinois Street will be closed post-event to through traffic to allow unimpeded access for Muni. All traffic associated with adjacent office, clinic, or parking uses will be allowed full access at all times. Pedestrian access from the Event Center to the temporary Muni stop on Illinois will be directed either east or west along the north side of 16th Street to a pedestrian crossing located at the Illinois Street/parking garage driveway. The 16th Street north sidewalk will be designed with a minimum 15-foot clearance from the curb to provide adequate circulation and queuing space for pedestrians. Transbay Terminal and Ferry Building-bound attendees will be directed towards the shuttle stops located on the east side of 3rd Street north of South Street. Both northbound lanes on 3rd Street and all lanes on South Street west of 450 South St. will be closed to vehicle traffic to allow for safe and effective pedestrian access to special event shuttles.

5.3.4 Bicycle Departures

For those cyclists using the indoor bicycle valet, departures will be metered by the process of retrieving bicycles. It is forecast that approximately 300 bicycles will depart from the indoor valet bicycle parking facility over approximately 30 minutes with three staff retrieving a bike every 15-20 seconds. Some cyclists may utilize the planned bike share station after a game. Bicycles will also depart from nearby public bike racks and from the temporary outdoor bike valet area, when available.

Most bicyclists are expected to use the bikeway on Terry François Boulevard to travel north or south from the Event Center. Most cyclists traveling westbound will likely use the routes on 16th and 17th Streets. During peak event conditions, temporary lane closures will be in place on 16th Street and the westbound curb-side bike lane will be closed to accommodate shuttle bus loading. PCOs will use cones or other physical barriers to designate an alternate route for westbound cyclists through a closed vehicular lane from Terry François Boulevard to Illinois Street during post-event conditions. PCOs will facilitate safe access for cyclists along this segment of 16th Street.

Pedicabs, will be accommodated near the site, especially during peak events. Most pedicabs are expected to travel north/south to the site and are expected to use the Terry François Blue Greenway when it is complete. A pedicab staging area is proposed for the east side of Terry François Boulevard just south of 16th Street. This is consistent with the concentration of bicycle and cyclist-serving facilities in the southeast corner of the site.

5.3.5 Taxis and Charter Buses

During peak events, most taxi trips will occur immediately following the end of the event. On convention days, several hundred taxi trips will occur as attendees travel between the Event Center and nearby hotels and the Moscone Convention Center. Unlike game patron departures for an NBA event, which are heavily concentrated in the first hour following the end of a game, convention attendee departures will be more spread out.

A charter bus zone will be located along 16th Street for pick-off activity during both small events. A total of 500 feet of curb space (accommodating 6-8 buses) will be available on the north side of the street between Illinois St. and Terry François Boulevard.

Taxi zones will be designated for all events on the south side of South Street, east of Bridgeview Way and along the west side of Terry François Boulevard south of South Street. Terry François Boulevard will also include access for additional non-taxi pick-off activity at all times. This zone will be managed by PCOs and Event Center staff to avoid vehicle conflicts with surrounding traffic. This zone will be located on the west side of the street and will minimize conflicts with bicycles on Terry François Boulevard.

During a post-peak event scenario, when temporary lane closures are in place, taxis will have preferential treatment to access the designated taxi zones adjacent to the Event Center. PCOs will be able to assist taxis arriving and departing the site to ensure safe, efficient, and convenient pick-up/drop-off operations.

5.3.6 Vehicle Departures from Event Center Garage

The intersection of 16th Street and Illinois Street at the garage driveway will be controlled by PCOs during the peak post-event period. Vehicles exiting from 16th Street will be forced to turn right (west – toward 3rd Street) or continue through to southbound Illinois Street. If this intersection becomes congested after events, Event Center staff may choose to direct some departing vehicles to the South Street garage access using signage inside the garage. Vehicle egress from both driveways is anticipated to take approximately twenty minutes in total.⁴

16th Street between 3rd Street and Terry François Boulevard will have restricted access, and will be used predominantly as a post-event shuttle staging area. Northbound lanes on Illinois Street (north of Mariposa Street) will be restricted to local traffic only and will also be used as a post-event shuttle staging area.

South Street, between 3rd Street and the 450 South Street Garage, will be closed post-event, and cars exiting the garages or coming from Bridgeview will be directed to travel east to Terry François Boulevard.

Vehicles with destinations along southbound I-280 will be suggested to travel either from 16th Street to the Owens Street extension, from Terry François Boulevard to Mariposa Street, or from 3rd Street to Cesar Chavez Street.

The suggested post-event driving routes are shown on **Figure 5-3**. These routes will be provided to attendees prior to an event to encourage effective distribution of departure traffic. All south-bound guests will be encouraged to use Mariposa Street, Illinois Street, or Third Street, not 16th Street and Owens Street, to access I-280 on-ramps. West-bound guests will not be encouraged to use Mission Bay Boulevard North, which is located close to several residential buildings. North-bound guests will be encouraged to leave the neighborhood

⁴ Source: Parking garage schematic design studies, Walter P. Moore, 2014.

efficiently and quickly by utilizing all available connections out of Mission Bay, including Third Street and Seventh Street. The post-event routes shown are subject to revision based on monitoring during the first four years of operations and may be modified to reflect new or updated neighborhood parking agreements.

Parking facilities shown on **Figure 5-2** are solely representative and do not pre-suppose third party agreements.

5.4 DAILY NON-EVENT ARRIVALS AND DEPARTURES

The project will provide a total of approximately 950 on-site parking spaces and 132 reserved spaces in the 450 South parking garage. Most of these spaces will be dedicated to office users (537), and arena use (283), with a limited number of valet parking spaces for retail users (130). The 132 reserved spaces in the 450 South Street parking garage will be dedicated to daily office and/or GSW employees only.

Office users are forecast to travel to the site primarily by auto and transit modes, with the balance walking and taking other modes. Retail users are forecast to have a slightly lower auto and transit share, with a higher share of patrons arriving by walking or other modes. As described above, TDM programs are proposed to increase above the forecasted proportion of office users who bicycle, walk or take transit to the site, and reduce the proportion who drive and park.

CHAPTER 6. CONTROLS BY EVENT SCENARIO

This chapter describes controls to be implemented around the Event Center Development given the range of scenarios previously described, starting with a typical, no-event day; and ending with a day when an Event Center event coincides with an event at AT&T Park. The primary goals of these controls are to ensure safety through reduction of conflicts between modes, manage all modes of traffic to ensure orderly access and egress reflecting transportation mode priority, and reduce nuisance and inconvenience to surrounding residents and businesses. The level of controls needed increases with the intensity of the scenario; thus, as events get larger, all controls listed for the smaller events are required, and additional controls are added.

The purpose of the transportation controls described in this chapter is to outline the necessary processes in order to meet the primary goals as described above.

The planned traffic control type (signalized or stop-controlled) for each intersection discussed in this section will be the following:

Traffic Signal

- 3rd Street / 16th Street (existing)
- 3rd Street / South Street (existing)
- 3rd Street / Mariposa Street (existing)
- Terry François Boulevard / South Street (current side-street stop control)
- Terry François Boulevard / 16th Street
- Terry François Boulevard / Illinois Street / Mariposa Street (current stop control)

All-way Stop Control

- 16th Street / Illinois Street / Event Center Development Garage Entrance (current side-street stop control)

While the initial traffic control for the 16th Street / Illinois Street / Event Center Development Garage Entrance intersection will be an all-way stop, conditions at the intersection will be monitored during various event and no-event days, and the GSW will install a traffic signal if needed.

Side-Street Stop Control

- South Street / Bridgeview Way / Event Center Development Garage Entrance

The Event Center Transportation Coordinator (ECTC), designated by the GSW for the project site, will communicate regularly with SFMTA to provide information on events and identify those events that require traffic control. A summary of the traffic control strategies identified in this chapter for the various event scenarios is provided in **Table 6-1**.

TABLE 6-1: SUMMARY OF TRAFFIC CONTROL STRATEGIES BY EVENT TYPE

TRAFFIC CONTROL STRATEGY	EVENT SCENARIOS				
	No Event	Convention/ Small Event (Weekday Daytime) ¹	Arena Concert (Evening) ²	Peak Event/ NBA Game (Evening)	Dual Event With AT&T Event

1. The 55 family shows held each year, with an average of about 5,000 attendees, are expected to require similar controls to the small event.
2. Arena Concert is assumed for events of average 12,500 attendees.

Source: Fehr & Peers, 2014.

6.1 CONTROL RECOMMENDATIONS FOR NO-EVENT DAY SCENARIO

The number of trips generated by the Event Center office, retail and restaurants on a typical no-event day does not warrant special traffic controls. The Event Center Development garage will be staffed on a typical day to monitor access for delivery vehicles. Signage will be posted to direct traffic to the parking garage entrances as well as to a valet parking stand located inside the parking garage, which will be staffed during a typical day.

Curb designations on the Event Center Development frontage will be as follows:

- Metered On-Street Parking on north side of South Street: north side of South Street from 450 South Street garage entrance to Terry François Boulevard. On-street parking may be prohibited along this stretch shortly before, during, and after events to allow the option for a second travel lane.
- TMA Shuttle Stop on South Street: south side of South Street, east of 3rd Street (all days/hours).
- Metered On-Street Parking on south side of South Street: from TMA shuttle stop to Bridgeview Way.
- Commercial Loading Zones: south side of South Street, just east of TMA Shuttle Stop (one designated space) and between Taxi Zone and Terry François Boulevard (seven designated spaces).
- Commercial Loading Zone on Terry François Boulevard: on west side of Terry François Boulevard, just south of South Street (eight designated spaces).
- Commercial Loading Zone on 16th Street: on north side of 16th Street, between 3rd Street and Illinois Street (one designated space).
- Taxi Zone on South Street: on the south side of South Street between the Event Center garage access (opposite Bridgeview Way) and the commercial loading zone.
- Metered On-Street Parking on Terry François Boulevard: on portions of the west side from South Street to 16th Street, with the exception of the centrally located paratransit vehicle stop area. On-street parking will be prohibited along this stretch after 5:00 PM to allow event pick-up/drop-off.
- Paratransit Bus Stop on Terry François Boulevard: west side of Terry François Boulevard, north of 16th Street (all days/hours, serving up to three paratransit vans).
- Metered On-Street Parking on 16th Street: north and south sides of 16th Street from Illinois Street east to Terry François Blvd., and the north side of 16th Street from 3rd Street to Illinois Street. On-street parking will be prohibited along this stretch after 5:00 PM on event days. The segment between Illinois Street and Terry François Boulevard on the north side of this segment will be reserved for post-event shuttles and charter buses during events.

- Media Trucks on 16th Street: the north side of 16th Street between 3rd Street and Illinois Street will be reserved for media trucks for NBA events.

Valet parking will be provided for the retail visitors along the South Street frontage, just inside the Event Center parking garage entry opposite Bridgeview Way.

Accessible passenger loading zones will be provided consistent with the requirements as outlined in the Draft Pedestrian Right of Way Accessibility Guidelines (PROWAG).

On-street parking is not currently permitted on the east side of 3rd Street adjacent to the site, and will continue to be prohibited. Signage will be placed along the east side of 3rd Street that prohibits stopping at all times, including passenger loading or unloading, under no-event and all event scenarios. Enforcement will be provided to prohibit any drop-off or pick-up activity.

Figure 2-2 summarizes on-street parking restrictions and availability for no-event conditions.

6.2 CONTROLS FOR CONVENTION SCENARIO

For the purposes of this TMP, a small event scenario is a 9,000 person convention. Conventions will be staffed by up to 6 Parking Control Officers (PCOs). The Event Center Development garage access and valet parking stand will be staffed as described above for a typical day.

6.2.1 General

PCO Supervisor

A PCO Supervisor will be stationed in the Transportation Management Center starting at least one hour prior to the convention start time and until pedestrian and vehicle volumes on-street have returned to typical no-event conditions following event's end. The PCO Supervisor will deploy up to 6 PCOs and assign transportation control tasks pre-event; monitor traffic conditions before, during, and after the event; and deploy PCOs and assign transportation control tasks post-event, as needed.

The PCO Supervisor will have radio contact with the Field Supervisor and all PCOs on the street and phone contact with relevant city agencies and departments (Muni, SFMTA Signal Shop, SFPD, SFFD), transit operators (Muni, BART, Caltrans) and Event Center staff (security, valet attendants, etc.). The PCO supervisor will also have authority and discretion in how PCOs are deployed, and may adjust the controls described below as conditions warrant.

6.2.2 Pre- and Post-Event Controls

Figures 6-1 and 6-2 show the location of temporary charter bus drop-off/pick-up locations for convention events. Convention events are expected to generate a large number of charter bus and taxi trips. Taxi trips will be served on the designated curb zone located on the south side of South Street and the west side of Terry François Boulevard.

All curbside parking and loading areas described for no-event conditions will convert to the event curb zones described below at 5:00 PM (before an evening event beginning 7:00 PM or later), or two hours before an event (starting at all other times). Event curb zone designations will revert back to no-event parking and loading conditions ninety minutes following an event's end.

Charter Bus Stop Zone

To serve the demand for increased charter bus service, a bus stop zone will be designated along a portion of westbound 16th Street. This curbside zone will be 500 feet (accommodating 6-8 buses at a time) in length and will be designated for charter bus pick-up/drop-off activity during a convention.

PCO Locations

PCOs' primary task will be to direct shuttle and taxi traffic that will be bringing attendees from area hotels and the Moscone Convention Center. Up to six PCOs will be stationed at the following locations:

- 3rd Street and South Street
- South Street and Terry François Boulevard
- 3rd Street and 16th Street
- 16th Street and Illinois Street
- 16th Street and Terry François Boulevard

The PCO locations listed in this document are solely representative and will remain flexible to respond to changing traffic conditions once the Event Center Development is complete. The number of PCOs per suggested location will be determined in consultation with the SFMTA and refined based on monitoring during the first four years of operations.

6.3 CONTROLS FOR ARENA CONCERT SCENARIO

This section addresses controls for a 14,000 person arena concert.

6.3.1 General

PCO Supervisor

A PCO Supervisor will be stationed in the Transportation Management Center (TMC) starting at least two hours prior to the concert start time and until pedestrian, bicycle, and vehicle volumes on-street have returned to typical no-event conditions following event's end. The TMC will be housed within the security center in the Event Center, though the TMC's final design will be developed through coordination with SFMTA Enforcement. The PCO Supervisor/Field Supervisor will deploy up to 17 PCOs to locations and assign transportation control tasks pre-event; monitor traffic conditions before, during, and after the event; and deploy PCOs and assign transportation control tasks post-event. The number of PCOs estimated for deployment are based on information available at this time and may be adjusted both prior to and during venue operations as more detailed information and observations allow.

The PCO Supervisor will have radio contact with the Field Supervisor and with all PCOs on the street, and phone contact with relevant city agencies and departments (Muni, SFMTA Signal Shop, SFPD, SFFD), transit operators (Muni, BART, Caltrans) and Event Center staff (security, valet attendants, etc.). The PCO supervisor will also have authority and discretion in how PCOs are deployed, and may adjust the controls described below as conditions warrant.

Transit loading may also be monitored by Transit Fare Inspectors (TFIs) and SFMTA Passenger Assistance Program staff (MTAPs) stationed at Muni platforms. The appropriate number of staff stationed in these roles will be determined in consultation with the SFMTA prior to the project opening.

6.3.2 Curb Management

All curbside parking and loading areas described for no-event conditions will convert to the event curb zones described below at 5:00 PM (before an evening event beginning 7:00 PM or later), or two hours before an event (starting at all other times). Event curb zone designations will revert back to no-event parking and loading conditions ninety minutes following an event's end.

Pre-event and post-event curb management for the concert scenario is shown in **Figures 6-3** and **6-5**. In order to manage the increased volume of attendees using regional transit, the concert scenario will also include designated curb space for a Muni bus that will travel back and forth to the 16th Street BART station exclusively. This pre-event bus stop will be 150 feet in length along the south side of 16th Street for BART passenger drop-off before concert events. These buses will then continue south on Illinois Street to Mariposa Street to return to the BART station. Post-event curb management will include a bus layover zone on northbound Illinois Street, where buses will layover to pick up passengers after a concert event. Post-event bus staging and passenger loading will be along the eastern side of Illinois Street and the north side of 16th Street east of Illinois St.

A concert event will also include increased drop-off/pick-up activity as attendees are shuttled to and from the event in passenger vehicles. To accommodate this, the 550 feet of "flex space" on Terry François Boulevard will include passenger drop-off/pick-up activity to be shared with taxis along the west side of the street. During concerts, as during Peak events, a taxi zone will also be located on the south side of South Street.

To provide a safe location for the high volumes of pedestrians to queue that are destined for the Muni station in the median of 3rd Street, and in consultation with the SFMTA, temporary lane closures will be implemented on northbound 3rd Street between 16th Street and Mission Bay Boulevard South, on westbound and eastbound on South Street from 3rd Street to the 450 South Street garage. Traffic exiting the 450 South Street garage, the north exit of the Event Center garage or Bridgeview Way will be directed east to Terry François Blvd. It is anticipated that the temporary lane closures will be in place for approximately 30-45 minutes during the peak post-event period, until most event attendees are able to board Muni trains on 3rd Street and most shuttle riders have boarded shuttles. It is anticipated that the no-event traffic volumes on the streets adjacent to the Event Center Development will be light after a typical concert event, so impacts to the existing traffic as a result of the temporary closure of northbound 3rd Street will be low. Traffic on Bridgeview Way will be monitored by PCOs and will be signed to encourage access for local traffic only to the uses within that block, including the 450 South Street Garage. Variable Message Signs (VMS) and detour signs that will be programed and/or placed well in advance of the temporary closures to notify drivers of alternate routes, including those depicted in **Figure 6-10**. Proposed locations for permanent Variable Message Signs are listed below:

- Northbound 3rd Street – South of Mariposa (existing VMS)
- Westbound 16th Street – East of I-280 (proposed new VMS)
- Southbound 3rd Street – South of Lefty O'Doul Bridge (proposed new VMS)
- Eastbound Mariposa Street – East of I-280 (proposed new VMS)

Based on operating conditions for AT&T Park, it is assumed that SFMTA staff will set up and store barricades to mark and enforce temporary lane closures. Barricade equipment may be temporary stored in a truck at the southern end of Illinois St., just north of Mariposa, and/or in a storage facility located on-site.

The UCSF Women's Cancer & Children's Hospital, scheduled to open on February 1, 2015, is located on the west side of 3rd Street between 16th Street and Mariposa Street. Access to the hospital will be provided from, both 16th Street and Mariposa Street via an extension of 4th Street. Emergency vehicles traveling to the hospital will not be affected by the post-game partial street closures on northbound 3rd Street (north of 16th Street) described above, as multiple other routes to the hospital's major access points will main open. Emergency vehicles exiting the hospital may need to travel northbound on 3rd Street, north of 16th Street, where the temporary closures are planned. In those situations, PCOs may remove temporary barriers and allow emergency vehicles to use northbound 3rd Street, or emergency vehicles may use the southbound lanes of 3rd Street to travel northbound. The Event Center Transportation Coordinator will provide the hospital with a list of dates and times during which partial street closures are anticipated. Post-event traffic will be directed to use both 16th Street and Mariposa Street to access I-280 ramps to enable fast and efficient departures from the site. Northbound traffic will be directed to westbound 16th Street and north on 7th Street, east on Bryant Street to the I-80 ramp at 5th Street.

6.3.3 Pre-Event Controls

Pre-event controls are detailed here and illustrated on **Figures 6-3** and **6-4**.

PCO Locations

Up to 17 PCOs will be stationed at key locations, as determined by the PCO Supervisor before, during, and after events, such as those listed below. Their primary task will be to manage pedestrian and vehicle traffic.

- 3rd Street and South Street
- South Street and Bridgeview Way
- South Street and Terry François Boulevard
- 3rd Street and 16th Street
- 16th Street and Illinois Street
- 16th Street and Terry François Boulevard
- Mariposa Street and I-280 northbound ramps/Owens Street
- Mariposa Street and 3rd Street
- Mariposa Street and 4th Street
- Mariposa Street and Illinois Street
- Channel Street and 3rd Street
- Channel Street and 4th Street
- Mission Bay Boulevard North and Terry Francois Boulevard
- Mission Bay Boulevard South and Third Street
- One roving PCO (or more if necessary) to monitor general parking issues and respond to complaints called in throughout the neighborhood

The PCO locations listed in this document are solely representative and will remain flexible to respond to changing traffic conditions once the Event Center Development is complete. The number of PCOs per suggested location will be determined in consultation with the SFMTA and refined based on monitoring during the first four years of operations.

UCSF Mission Bay Muni Platform

PCOs will be stationed at the intersection of South Street and 3rd Street to facilitate pedestrian crossings to/from the Muni platforms and minimize conflicts with vehicles and light rail cars.

Event Center Garage Driveway on 16th Street

Concert attendees with pre-sold parking passes for the Event Center garage will enter via the left turn lane on eastbound 16th Street leading to the garage driveway or from northbound Illinois Street to self-park. Event Center staff will check parking passes before vehicles enter the garage.

PCOs will be stationed at the Event Center garage driveway to facilitate vehicle egress (office employees leaving on weekday evenings) and ingress (event attendees entering the garage), minimize conflicts with pedestrians and bicycles on 16th Street, and coordinate with PCOs located at the adjacent 3rd Street / 16th Street intersection. A key goal of the PCOs located at the adjacent intersections on 16th Street will be to give priority to the eastbound left turn movements from 16th Street into the garage to ensure that this inbound event traffic

entering the Event Center garage does not queue back to the 16th Street / 3rd Street intersection. PCOs will also work in conjunction with Event Center staff that will be checking attendees' tickets for valid access to the garage on the day of the concert. Drivers who enter the eastbound left-turn pocket or are stationed to enter the garage on Illinois Street without a valid parking pass will be redirected to drive east on 16th Street to Terry François Boulevard towards other nearby garages or parking lots.

3rd Street / 16th Street Intersection

PCOs will be stationed at the intersection of 3rd Street and 16th Street to maintain the flow of Muni trains on 3rd Street, provide for the safe movement of pedestrians and bicyclists, and facilitate the flow of vehicles to eastbound 16th Street to access the Event Center parking garage. PCOs will work to ensure that the intersection does not become blocked with vehicles. As noted above, the PCO stationed at 3rd Street/16th Street will work in conjunction with the PCO at the Event Center garage entrance to coordinate the flow of traffic into the garage.

Drop-Off on Southbound Terry François Boulevard

Event Center ticket holders may be dropped off on the west side of Terry François Boulevard between South Street and 16th Street as shown on **Figure 6-3**. This curbside area will be shared with taxis.

6.3.4 Post-Event Controls

Many of the post-event controls are similar to the pre-event controls but are repeated here for ease of understanding, and the post-event curb and lane configurations are illustrated on **Figures 6-5** and **6-6**.

PCO Locations

PCOs will be stationed at all of the same locations as identified previously for the pre-event scenario, with one exception. The PCO(s) located at the intersection of Mariposa Street and I-280 northbound ramps/Owens Street during the pre-event period will relocate to the intersection of 16th Street/ Owens Street during the post-event period.

UCSF Mission Bay Muni Platform

Muni tickets will be sold at the Event Center box office before, during, and after events.

PCOs will be stationed at the intersection of 3rd Street and South Street to manage pedestrian flow to/from the Muni platforms and minimize conflicts with vehicles and light rail cars. Temporary lane closures will also be in effect for enhanced pedestrian safety on northbound 3rd Street north of 16th Street and on South Street west of the 450 South St. garage exit. Muni staff will also be stationed to check transit tickets and manage the boarding process.

Event Center Garage Driveway on 16th Street

During no-event conditions, traffic at the 16th Street / Illinois Street intersection will be managed by an all-way stop control. During events, the PCOs will be able to direct traffic at the intersection during event conditions to allow continuous flow on individual movements as needed. PCOs at the garage driveway located at the intersection will have the following objectives:

- Managing alternating flows of vehicle traffic exiting the garage with pedestrian-bicycle flows along 16th Street

- Managing alternating flows of vehicle traffic exiting the garage with shuttle traffic and occasional westbound traffic flow on 16th Street to accommodate safe and efficient shuttle loading and departure.
- Coordinating with PCOs located along 16th Street so that they stop pedestrian crossings of 16th Street during the same windows of time that vehicles are released from the Event Center garage onto east- and westbound 16th Street
- Maintaining vehicle access to garages for the 409 and 499 Illinois Street buildings, as well as future UCSF buildings on Blocks 33 and 34, from 16th Street and Illinois Street.

Post-events, southbound traffic exiting the Event Center garage will be advised to travel west on 16th Street to southbound Owens Street to access I-280. Any traffic heading to the north from the parking garage will be advised to travel west on 16th Street to northbound 7th Street due to the temporary northbound closure on 3rd Street.

3rd Street / 16th Street

PCOs will be stationed at the intersection of 3rd Street and 16th Street to facilitate the flow of vehicles from westbound 16th Street from the parking garages, along with Muni trains, bicyclists, and pedestrians while preventing event traffic from going north on 3rd Street. They will work in conjunction with the PCO at the garage entrance to stop pedestrians crossing 16th Street during the same window that vehicles are exiting the garage on 16th Street, and prohibit northbound traffic from accessing 3rd Street north of 16th Street due to the temporary lane closures and direct traffic to northbound Terry François Boulevard.

Temporary Lane Closures

Up to 17 PCOs will be stationed at key locations to redirect traffic due to the temporary lane closures. The PCO station located on South Street east of 3rd Street will manage the South Street partial closure as well as Bridgeview Way. The PCOs will direct all traffic exiting the 450 South Street and Event Center garages to Terry François Boulevard via eastbound South Street, and restrict northbound traffic from using Bridgeview Way except for neighborhood traffic. The PCOs will also direct any southbound traffic on Bridgeview Way left onto eastbound South Street

PCOs will also be stationed at the Terry François Boulevard / South Street intersection to manage traffic exiting the garages on South Street. They will direct traffic either north or south on Terry François Boulevard, and restrict vehicle access onto westbound South Street. They will also manage alternating flows of pedestrian crossings of South Street and vehicles turning onto Terry François Boulevard.

PCOs will be stationed on 3rd Street at Mariposa Street to direct no-event northbound traffic to alternative routes in advance of the temporary closure on northbound 3rd Street, to reduce congestion at the intersection of 3rd Street / 16th Street. Northbound traffic will be redirected east along Mariposa Street to northbound Terry François Boulevard. Variable message signs will also direct no-event through traffic to Terry François Boulevard in advance of the intersection of 3rd Street / Mariposa Street. All PCOs stationed at locations along 3rd Street will also assist emergency vehicles and autos needing emergency access to the UCSF Medical Center to navigate congested conditions and utilize closed travel lanes as needed. New permanent Variable Message Signs (VMS) will be added at three locations, and existing VMSs will operate to provide traffic alerts, messages, and alternative driving routes for neighborhood residents at the following locations:

- Northbound 3rd Street – South of Mariposa (existing VMS)

- Westbound 16th Street – East of I-280 (proposed new VMS)
- Southbound 3rd Street – South of Lefty O’Doul Bridge (proposed new VMS)
- Eastbound Mariposa Street – East of I-280 (proposed new VMS)

Based on operating conditions for AT&T Park, it is assumed that SFMTA staff will set up and store barricades to mark and enforce temporary lane closures.

Temporary Turn Restrictions

Temporary turn restrictions will be in place post-event to discourage vehicles traveling westbound on 16th Street from turning left onto 3rd Street, Owens Street or Mississippi Street. PCOs will be responsible for coning off left turn pockets at these three intersections and enforcing left-turn restrictions. Signage will be provided inside event garages to direct vehicles destined for I-280 to use Terry François Boulevard to Mariposa Street as the primary access.

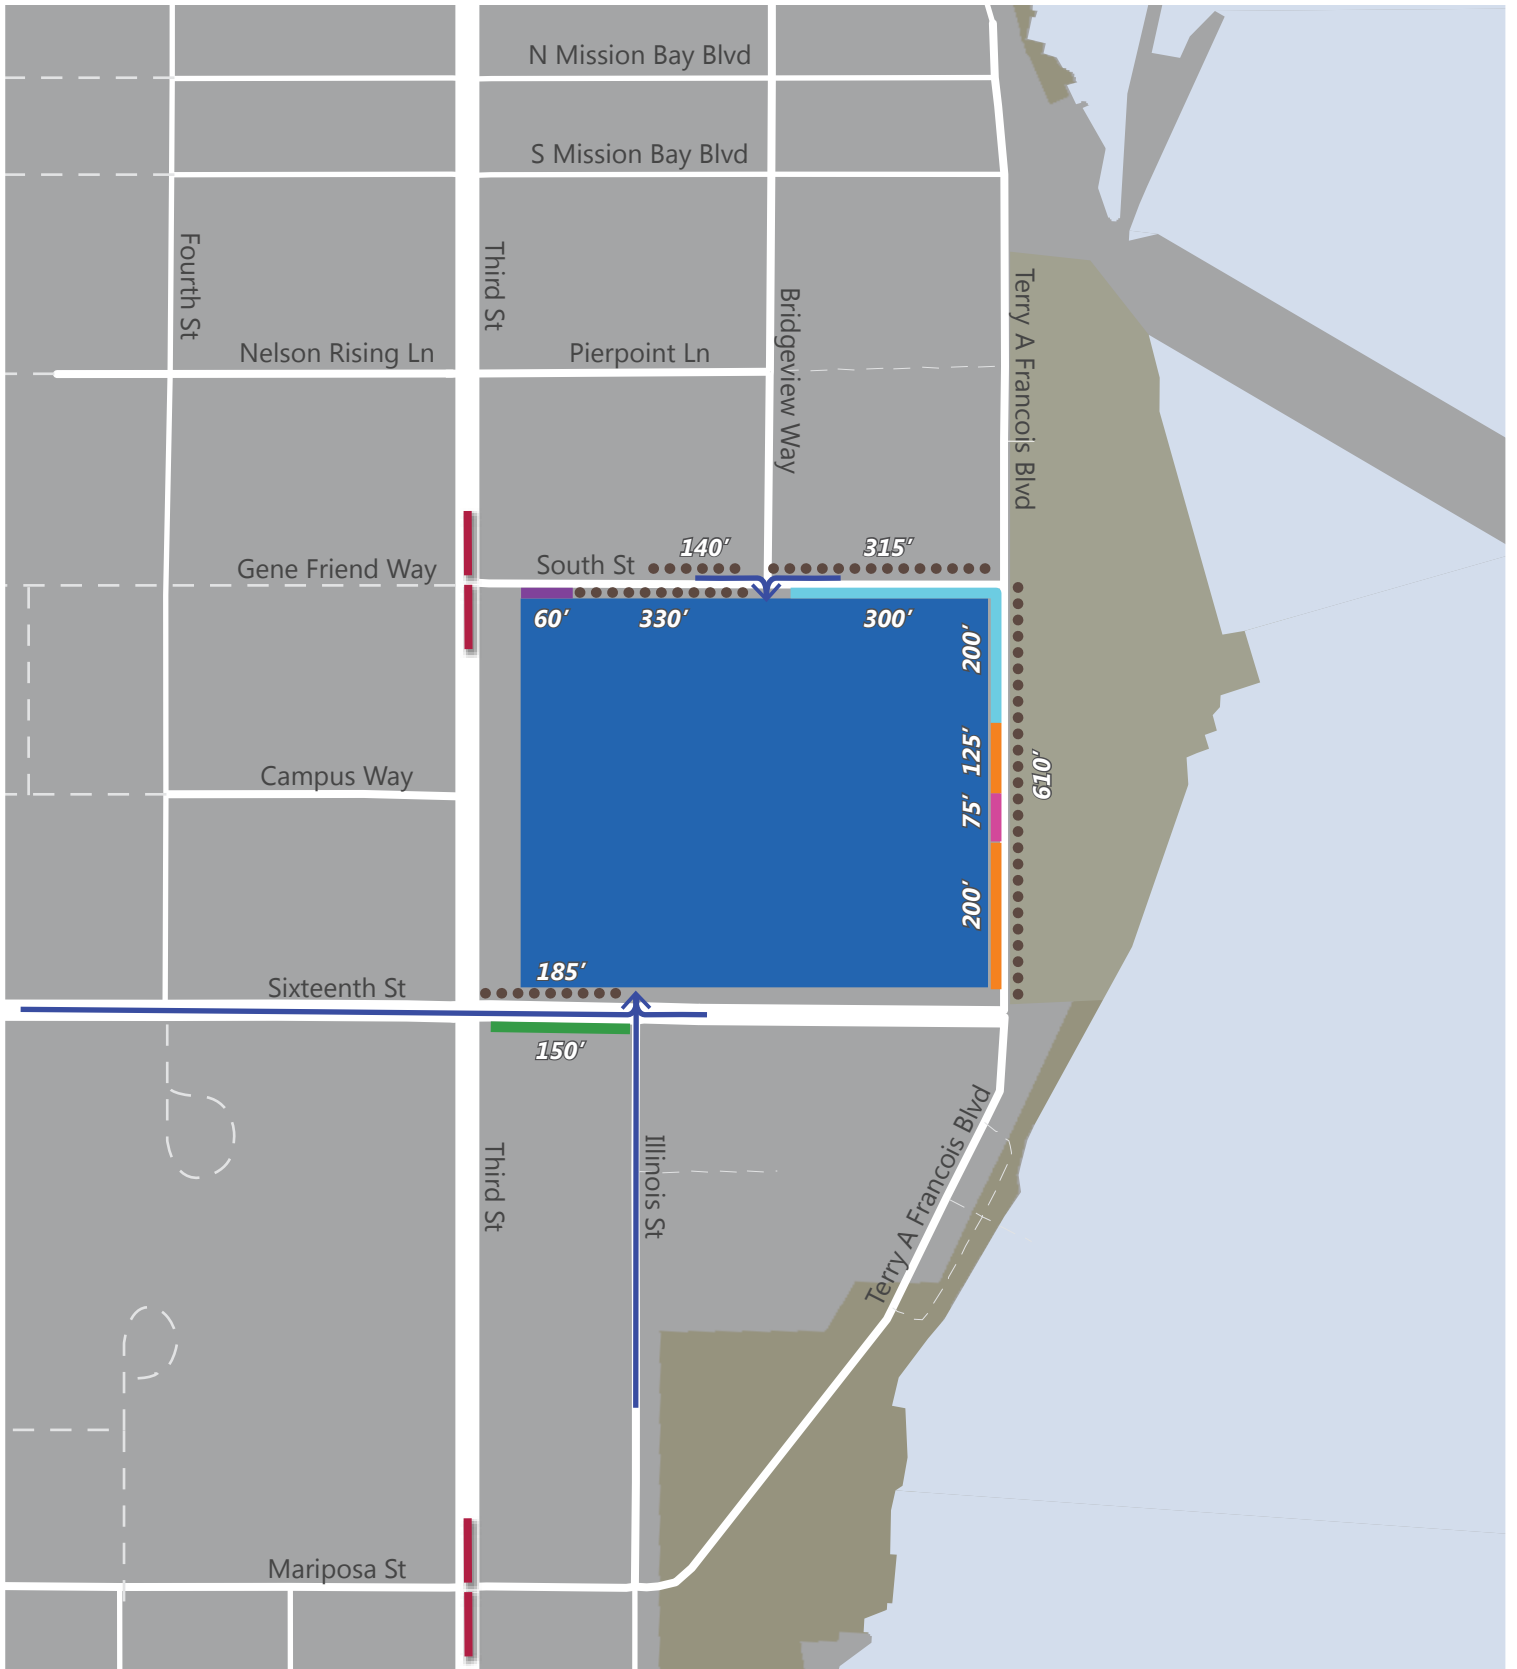

Passenger Pick-Up on Terry François Boulevard

The passenger pick-up location will be the same as the pre-event drop-off location – on the west side of Terry François Boulevard. This location will also include Paratransit loading, however each space will be designated and separated.

Terry François and 16th Intersection

PCOs will be stationed at the intersection of Terry François Boulevard and 16th Street following a concert to manage bicycle and pedestrian flows, detour traffic from the temporary lane closures on South Street and 3rd Street, as well as event traffic from nearby parking facilities. Traffic will be directed mostly north and south on Terry François Boulevard to avoid adding to the congestion on 16th Street and to avoid conflicts with shuttle buses. Post-event PCO controls are proposed to be the same and are illustrated on **Figure 6-6**.

6.4 CONTROLS FOR PEAK EVENT SCENARIO

6.4.1 General

PCO Supervisor

As with a concert event, a PCO Supervisor will be stationed in the Transportation Management Center and/or in the field starting at least two hours prior to the event's start time and until pedestrian, bicycle, and vehicle volumes on-street have returned to typical no-event conditions following event's end. The PCO Supervisor will deploy up to 18 PCOs to locations and assign transportation control tasks pre-event monitor traffic conditions before, during, and after the event; and deploy PCOs and assign transportation control tasks post-event.

Transit loading may also be monitored by Transit Fare Inspectors (TFIs) and SFMTA Passenger Assistance Program staff (MTAPs) stationed at Muni platforms.

6.4.2 Curb Management

All curbside parking and loading areas described for no-event conditions will convert to the event curb zones described below at 5:00 PM (before an evening event beginning 7:00 PM or later), or two hours before an event (starting at all other times). Event curb zone designations will revert back to no-event parking and loading conditions ninety minutes following an event's end.

Pre-event curb management will be the same as that shown for the concert scenario with one addition. GSW games will require media coverage and designated curbside parking for media satellite trucks. The total curb length required will be up to 200 feet during regular season games, which includes parking for 2 uplink trucks and 4 ENG trucks. This will be provided on the north side of 16th Street starting just east of 3rd Street. A curb distance of 150 feet will be designated for media trucks, as shown in **Figure 6-7**.

Post-event curb management will be the same as that shown for the concert scenario with the exception of 16th Street. The media satellite truck parking detailed above in the pre-event curb management for the peak event will also be implemented in the post-event curb management. All other post-event curb designations for a peak event are the same as the post-event concert scenario, including the temporary lane closures on South, 3rd, and Illinois Streets, the special event shuttle stops, and the additional passenger pick-up zone on Terry François Boulevard. These are shown on **Figure 6-9**.

To increase safety for the high volumes of pedestrians walking to the Muni Station on 3rd Street, temporary lane closures will be implemented on northbound 3rd Street between 16th Street and Mission Bay Boulevard South, on westbound and eastbound South Street west of the parking garages. It is anticipated that the background traffic volumes will be light after a game, so impacts to the existing traffic patterns will be low. Variable message and detour signs will be placed well in advance of the temporary closures to notify drivers of alternate routes. Proposed locations for permanent variable message signs are listed below:

- Northbound 3rd Street – South of Mariposa (existing VMS)
- Westbound 16th Street – East of I-280 (proposed VMS)
- Southbound 3rd Street – South of Lefty O'Doul Bridge (proposed VMS)
- Eastbound Mariposa Street – East of I-280 (proposed VMS)

Emergency vehicles exiting the UCSF hospital west of 3rd Street between 16th Street and Mariposa Street will be granted access to northbound 3rd Street during the post-event street closure described above. PCOs may remove temporary barriers and allow emergency vehicle access to northbound 3rd Street in those situations, or emergency vehicles may drive in the southbound lanes to travel northbound. GSW staff will provide the hospital with a list of dates and times of post-event street closures.

6.4.3 Pre-Event Controls

Pre-event controls will be the same as the concert scenario, but are repeated here and illustrated on **Figure 6-8**.

PCO Locations

Up to 17 PCOs will be stationed at key locations, as determined by the PCO Supervisor before, during, and after events, such as those listed below. Their primary task will be to manage pedestrian and vehicle traffic.

- 3rd Street and South Street
- South Street and Bridgeview Way
- South Street and Terry François Boulevard
- 3rd Street and 16th Street
- 16th Street and Illinois Street
- 16th Street and Terry François Boulevard
- Mariposa Street and I-280 northbound ramps/Owens Street
- Mariposa Street and 3rd Street
- Mariposa Street and 4th Street
- Mariposa Street and Illinois Street
- Channel Street and 3rd Street
- Channel Street and 4th Street
- Mission Bay Boulevard North and Terry Francois Boulevard
- Mission Bay Boulevard South and Third Street
- One roving PCO (or more if necessary) to monitor general parking issues and respond to complaints called in throughout the neighborhood

The PCO locations listed in this document are solely representative and will remain flexible to respond to changing traffic conditions once the Event Center Development is complete. The number of PCOs per suggested location will be determined in consultation with the SFMTA and refined based on monitoring during the first four years of operations.

UCSF Mission Bay Muni Platform

PCOs will be stationed at the intersection of South Street and 3rd Street to facilitate pedestrian crossings to/from the Muni platforms and minimize conflicts with vehicles and Muni trains.

Event Center Garage Driveway on 16th Street

Game attendees with pre-sold parking passes for the Event Center garage would enter via the left turn lane on eastbound 16th Street leading to the garage driveway or from northbound Illinois Street to self-park. GSW staff will check parking passes before vehicles enter the garage.

PCOs will be stationed at the Event Center garage driveway to facilitate vehicle egress (office employees leaving on weekday evenings) and ingress (event attendees entering the garage), minimize conflicts with pedestrians and bicyclists on 16th Street, and coordinate with PCOs located at the adjacent 3rd Street / 16th Street intersection. A key goal of the PCOs located at the adjacent intersections on 16th Street will be to ensure safety to all modes by minimizing conflicts between modes while ensuring the flow of vehicles into the garage does not result in queues that back up into adjacent intersections. They will also work in conjunction with Event Center staff that will be checking attendees' tickets for valid access to the garage on game day. Drivers who enter the eastbound left-turn pocket or are stationed to enter the garage on Illinois Street without a valid parking pass will be redirected to drive east on 16th Street to Terry François Boulevard towards other nearby garages or parking lots.

3rd Street / 16th Street Intersection

PCOs will be stationed at the intersection of 3rd Street and 16th Street to maintain the flow of Muni trains on 3rd Street, and provide for the safe movement of pedestrians, bicyclists, and vehicles. PCOs will work to ensure that the intersection does not become blocked with vehicles. As noted above, the PCO stationed at 3rd Street/16th Street will work in conjunction with the PCO at the Event Center garage entrance.

Drop-Off on Southbound Terry François Boulevard

Event Center ticket holders may be dropped off on the west side of Terry François Boulevard between South Street and 16th Street as shown on **Figure 6-7**. This curbside area will be separately designated, but shared.

6.4.4 Post-Event Controls

All of the post-event controls are generally the same as the post-event controls for a concert scenario but are repeated here for ease of understanding when reviewing all controls for the peak event exclusively. The post-event curb and lane configurations are illustrated on **Figures 6-9** and **6-10**.

Muni tickets will be sold at the Event Center box office before, during, and after events.

PCOs will be stationed at the intersection of 3rd Street and South Street to manage pedestrian flow to/from the Muni platforms and minimize conflicts with vehicles and Muni trains. Temporary lane closures will also be in effect for enhanced pedestrian safety on northbound 3rd Street north of 16th Street and on South Street east of 3rd Street. Muni staff will also be stationed to check tickets and manage the boarding process.

PCO Locations

PCOs will be stationed at locations determined by the PCO Supervisor, which may include those identified previously for the pre-event scenario, with two exceptions. At least one PCO will be located at the intersection of 16th Street/Owens Street to facilitate heavy left turn flows from westbound 16th Street onto southbound Owens Street and access to I-280. One PCO will also be located at the intersection of Fifth Street/Bryant Street/I-80 eastbound ramps.

Event Center Garage Driveway on 16th

PCOs at the Event Center garage driveway at the intersection of 16th Street / Illinois Street will have the following objectives:

- Managing alternating flows of vehicle traffic exiting the garage with pedestrian-bicycle flows along 16th Street
- Managing alternating flows of vehicle traffic exiting the garage with shuttle traffic and occasional westbound traffic flow on 16th Street to accommodate safe and efficient shuttle loading and departure.
- Coordinating with PCOs located along 16th Street so that they stop pedestrian crossings of 16th Street during the same windows of time that vehicles are released from the Event Center garage onto east- and westbound 16th Street
- Maintaining vehicle access to garages for the 409 and 499 Illinois Street buildings, as well as future UCSF buildings on Blocks 33 and 34, from 16th Street and Illinois Street.

To extend the effective length of the westbound left turn pocket at the 16th Street / 3rd Street intersection, temporary cones will be placed to close the eastbound left turn lane on 16th Street into the Event Center garage entrance after a game, if necessary, extending the turn pocket to 160 feet. The extended turn pocket will be used for westbound vehicles making a left turn onto southbound 3rd Street. Motorists wishing to enter the Event Center garage from eastbound 16th Street will be able to make a left turn from the eastbound through lane.

Southbound traffic exiting the Event Center garage will be advised to travel west on 16th Street to southbound Owens Street to access I-280. Any traffic heading to the north from the parking garage will be advised to travel west on 16th Street to northbound 7th Street due to the temporary northbound closure on 3rd Street.

3rd Street / 16th Street

PCOs will be stationed at the intersection of 3rd Street and 16th Street to facilitate the flow of vehicles from westbound 16th Street from the parking garages, along with Muni trains, bicyclists, and pedestrians while preventing event traffic from going north on 3rd Street. They will work in conjunction with the PCO at the garage entrance to stop pedestrians crossing 16th Street during the same window that vehicles are exiting the garage on 16th Street, and prohibit northbound traffic from accessing 3rd Street north of 16th Street due to the temporary lane closures and direct traffic to northbound Terry François Boulevard.

Temporary Lane Closures

Up to 17 PCOs will be stationed at key locations to redirect traffic due to the temporary lane closures. The PCO station located on South Street east of 3rd Street will manage the temporary South Street lane closure as well as Bridgeview Way. The PCOs will direct all traffic exiting the 450 South Street (office and retail employees) and Event Center (event attendees) garages to Terry François Boulevard via eastbound South Street, and restrict

northbound traffic from using Bridgeview Way, except for neighborhood traffic. These PCOs will also direct any southbound traffic on Bridgeview Way left onto eastbound South Street.

PCOs will also be stationed at the Terry François Boulevard / South Street intersection to manage traffic exiting the garages on South Street. They will direct traffic either north or south on Terry François Boulevard, and restrict vehicle access onto westbound South Street. They will also manage alternating flows of pedestrian crossings of South Street and vehicles turning onto Terry François Boulevard. PCOs will also allow for local traffic to access garages on 16th Street and Illinois Street.

PCOs will be stationed on 3rd Street at Mariposa Street to direct no-event northbound traffic to alternate routes in advance of the temporary closure on northbound 3rd Street to reduce congestion at the intersection of 3rd Street / 16th Street. Northbound traffic will be redirected east along Mariposa Street to northbound Terry François Boulevard. Variable message signs (VMSs) will also direct traffic to Terry François Boulevard in advance of the intersection of 3rd Street / Mariposa Street. VMSs and detour signs will be programmed and/or placed well in advance of the temporary closures to notify drivers of alternate routes, including those depicted in **Figure 6-10**. Permanent Variable Message Signs will be placed at the following locations to notify drivers of detours in advance:

- Northbound 3rd Street – South of Mariposa (existing VMS)
- Westbound 16th Street – East of I-280 (proposed VMS)
- Southbound 3rd Street – South of Lefty O’Doul Bridge (proposed VMS)
- Eastbound Mariposa Street – East of I-280 (proposed VMS)

All PCOs stationed at locations along 3rd Street will also assist emergency vehicles and autos needing emergency access to the UCSF Medical Center to navigate congested conditions and utilize closed travel lanes as needed.

Temporary Turn Restrictions

Temporary turn restrictions will be in place post-event to discourage vehicles traveling westbound on 16th Street from turning left onto 3rd Street, Owens Street or Mississippi Street. PCOs will be responsible for coning off left turn pockets at these three intersections and enforcing left-turn restrictions. Signage will be provided inside event garages to direct vehicles destined for I-280 to use Terry François Boulevard to Mariposa Street as the primary access.

Passenger Pick-Up on Terry François Boulevard

The passenger pick-up location will be the same as the pre-event drop-off location – on the west side of Terry François Boulevard. This location will also include Paratransit loading.

Terry François and 16th Intersection

PCOs will be stationed at the intersection of Terry François Boulevard and 16th Street following a game’s end to manage bicycle and pedestrian flows, detour traffic from the temporary lane closures on South Street and 3rd Street, as well as event traffic from nearby parking facilities. Traffic will be directed mostly north and south on Terry François Boulevard to avoid adding to the congestion on 16th Street and to avoid conflicts with shuttle buses.

PEAK EVENT: POST-EVENT CONTROLS

6.5 CONTROLS FOR PEAK EVENT COINCIDING WITH AT&T PARK EVENT SCENARIO

See Section 2.2 for a description of the scenario in which a peak Event Center event coincides with an AT&T Park event.

6.5.1 General

On days where Event Center events coincide with AT&T Park events, pedestrian, bicycle, and vehicle volumes along Terry François Boulevard and 3rd Street will be greater. Controls implemented as part of the Event Center TMP will not change, but should be coordinated with controls implemented as part of the AT&T Park standard TMP so that:

- Efforts are not duplicated; and
- Controls are complementary rather than contradictory.

The Warriors support the formation of a working group, comprised of the Warriors, Giants, SFMTA, Mission Bay CAC, UCSF, MBBTCC, and other stakeholders, to regularly discuss potential overlaps and the resulting traffic and transit conditions, and to propose solutions on an individual event basis. For example, if the AT&T Park TMP includes PCO control at any PCO intersections listed in this document and events' start or end times coincide, no additional PCOs will be necessary at that location. **Figures 6-11** and **6-12** show where PCOs would be stationed pre- and post-event during a dual event scenario, including a new post-event dual event location for a PCO at Mariposa Street and Fourth Street.

Transit loading may also be monitored by Transit Fare Inspectors (TFIs) and SFMTA Passenger Assistance Program staff (MTAPs) stationed at Muni platforms.

CHAPTER 7. FREIGHT LOADING

7.1 FREIGHT ACCESS FOR EVENT CENTER DEVELOPMENT (BLOCKS 29-32)

Freight access to the Event Center Development site located on Blocks 29-32 will be provided as described below and as shown on **Figure 7-1**.

- Event Center Loading Docks – A formal truck loading area will be located on the lower level of the parking structure. Trucks will enter and exit the loading dock via access-controlled truck-only lanes in the parking structure’s driveway on 16th Street at Illinois Street. All trucks that service events at the Event Center, including semi-trailer trucks, single unit trucks, and trash trucks, will use the loading dock area. The loading area will provide a “hammerhead” turnaround area so that trucks can easily maneuver into and out of the loading slips. Truck access will be limited to the extent feasible during pre- and post-event times to minimize potential conflicts with vehicles arriving or departing the garage.
- Retail Truck Loading Docks – Smaller loading docks for single unit trucks will be located on the Lower Level of the parking structure. This area will be available for use by the visitor-serving retail uses. Trucks will enter and exit the loading area via the access-controlled truck-only lanes in the driveway on 16th Street at Illinois Street.
- Office Truck Loading Docks – Loading docks for the office towers will be located on the Lower Level of the parking structure in two areas. Three loading docks for the South Street office tower will be provided in the northwest corner of the loading area and one loading dock for the 16th Street office tower will be located in the southwest corner of the loading area, just to the left of the first garage ramp. Both loading areas will also include trash compactors for the office towers. Trucks will enter and exit the loading area via the access-controlled truck-only lanes in the driveway on 16th Street at Illinois Street.
- South Street and Terry François Boulevard Commercial Curbside Loading – Parking along portions of the Event Center Development frontage will be designated for commercial truck deliveries for retail uses. On-street commercial loading zones will be designated as active loading zones all hours.
- Market Hall Loading – There will also be a small separate loading area, exclusive to the Market Hall uses, for which small delivery vehicles will enter via the South Street garage entrance.

-  Trash Compactors
-  Loading Slips

Garage Access from Above

Not to Scale

CHAPTER 8. EMERGENCY VEHICLE ACCESS

The Event Center Development is served by the San Francisco Fire Department (SFFD) and the San Francisco Police Department (SFPD). A new SFFD fire house and SFPD headquarters building is being constructed at Block 8 in the Mission Bay South area on China Basin Street east of 3rd Street.

The Event Center Development project also anticipates installing on-site generators capable of providing up to three megawatts (MW) of emergency, standby and optional power in the case of temporary loss of normal utility power. The on-site generators would provide power to the Transportation Management Center (TMC) during such an emergency to facilitate efficient communication between TMC staff and emergency service personnel.

8.1 EMERGENCY VEHICLE ACCESS FOR EVENT CENTER

Emergency vehicle access to the Event Center Development site will be provided as described below and shown on **Figure 8-1**.

- SFFD vehicles from the new fire house on China Basin Street would access the Event Center Development via southbound 3rd Street or Terry François Boulevard. Direct access to the Event Center Arena will be provided via the southeast corner plaza on the corner of Terry François Boulevard and 16th Street. Fire Department vehicles traveling south on 3rd Street would make a left at 16th Street. Fire Department vehicles traveling south on Terry François Boulevard would make a right turn onto 16th Street. Emergency vehicles servicing office buildings will use either 16th Street or South Street. SFPD vehicles or supplemental SFFD vehicles from other fire houses would access the western plaza via 3rd Street either from 16th Street (for vehicles traveling from the west via 16th Street) or from 3rd Street (for vehicles traveling from the north or from the south via 3rd Street). Exclusive transit rights-of-way along 3rd Street and 16th Street will accommodate emergency vehicles when traffic congestion might otherwise impair access, and emergency vehicles will be permitted on closed-streets as needed.

Staff in the TMC will also closely coordinate with emergency service personnel to facilitate access as needed.

8.2 EMERGENCY VEHICLE ACCESS FOR UCSF HOSPITAL

The UCSF Women's Cancer & Children's Hospital, scheduled to open on February 1, 2015, is located on the west side of 3rd Street between 16th Street and Mariposa Street. Access to the hospital will be provided from both 16th Street and Mariposa Street via extensions of 4th Street. Pre- and Post-event curb management and controls as related to the UCSF Hospital access for patients and staff are described in Chapter 6.

-  New Fire/Police Station
-  Emergency Vehicle Route to Project Site
-  Project Site

Not to Scale

CHAPTER 9. COMMUNICATION

9.1 OUTREACH

Outreach can provide useful trip planning information to guests and employees, in order to minimize confusion and risk of conflicts by providing advanced information on transportation choices for accessing the Event Center; and by alerting attendees to the location and purpose of temporary controls and measures. The following is an outreach strategy to accompany Event Center events. Outreach about transportation will promote use of non-auto modes to the Event Center.

Ticket purchase confirmation will include the following information:

- In addition to the option to pre-purchase parking at the Event Center, all attendees will receive a statement explaining that parking will be extremely limited on site and may not be available, an explanation of transit and bicycle resources, and detailed information about options for getting to the Event Center, including:
 - List of transit options available, including links to trip planning tools, schedules, fare information, and forms of payment (i.e. Clipper card brochure)
 - Location of real time transit information displays on the Event Center site
 - Reminder that Muni fares will be checked on the street, prior to walking up the Muni platform; that Muni tickets must be purchased ahead of time, and that they may be purchased at the Event Center box office
 - Links to web-based trip planning tools and resources (by transit, walking, bicycling, and driving)
 - Information on how to use transit (fare and payment information), best stops and stations for accessing the Event Center, walking routes to the Event Center from transit hubs
 - Recommended walking paths to the Event Center from transit hubs and other origins
 - Information on bicycle routes (i.e. link to San Francisco's Bicycle and Walking Map) and free bicycle valet services
 - Directions to general pick-up/drop-off location along Terry François Boulevard
 - Information on TMA shuttles (routes, times, stop locations)
 - Information on parking availability and pricing, and ability to pre-purchase parking at event center [this should be last on our list, as it will be last on our customers']
- For attendees who do purchase parking in the garage with their ticket:
 - Directions to the Event Center from different origins and instructions describing the best path to access the Event Center garage
 - Information on controls that will be in place following game's end and how to most effectively exit the Event Center garage towards desired destinations

9.2 WAYFINDING

Wayfinding can support easy, safe walking and bicycling trips, and reduce the risk of conflicts for all modes by directing people away from potential conflict points. The following is a wayfinding strategy to accompany Event Center events.

9.2.1 Pre-Event Wayfinding

- Signage, in accordance with San Francisco standards, directing visitors to arena, transit, taxi stands, identifying bikeways, locations of bicycle parking, bike share pods, etc. within ¼ mile of arena
- Build a base of permanent, intuitive wayfinding network that highlights local transit hubs and major destinations, and includes estimates of walking times along the most comfortable pedestrian corridors.
- Wayfinding efforts will be increased or emphasized during playoff NBA games due to these events attracting out of town attendees who will presumably be unfamiliar with the transportation network and transit options. These efforts may include additional temporary signage in the Event Center vicinity.
- Signage at all corners of the site directing walk-up attendees to Event Center entrances along routes that minimize pedestrian crossings of the Event Center garage driveway.
- Signage directing bicyclists to the indoor bicycle valet parking or temporary bicycle corrals. Signage will be placed at the following locations:
 - Northbound Illinois Street before the entry to the garage
 - Northbound and Southbound Terry François Boulevard just before the site
 - Eastbound 16th Street just before the site
- Signage directing eastbound bicyclists along 16th Street to walk up the sidewalk on the east side of 3rd Street to access bicycle rack parking located in the west plaza.
- Signage that directs vehicles towards the event center garage or other nearby garages/lots, including wayfinding signage on I-280 to direct vehicles to the best exit to access the site.

9.2.2 Post-Event Wayfinding

- Signage at Event Center exits that directs pedestrians leaving the site away from the Event Center garage driveway and towards key destinations such as BART (west and north), Caltrain (north), 22 Fillmore bus route (west) and Muni South Street stop (northwest corner).
- Signage outside bicycle valet parking directing bicyclists to use the Blue Greenway along Terry François Boulevard.
- Signage that directs vehicles towards the suggested post-event route, including garage exit wayfinding.

CHAPTER 10. MONITORING, REFINEMENT, AND PERFORMANCE STANDARDS

The Golden State Warriors will monitor and refine the TMP in conjunction with the City of San Francisco and the various transit providers throughout the life of the project through monitoring during the project's first four years of operations and an annual surveying and reporting program thereafter. The TDM plan will be continually refined by improving existing measures and introducing new strategies.

10.1 PURPOSE

The monitoring and refinement of the TMP will be conducted to accomplish the following objectives.

1. Weekday Event Auto Mode Share: Targeted average auto mode share should be no greater than 53 percent for weekday peak event arrivals (6:00 PM – 8:00PM).
2. Weekend Event auto Mode Share: Targeted average auto mode share should be no greater than 59 percent for weekend peak event arrivals (6:00 PM – 8:00PM).
3. Vehicle Queuing on City Streets: Traffic entering the parking garage from eastbound 16th Street does not spill back to 16th Street or into the Third Street intersection due to garage ingress.
4. Vehicle Queueing on City Streets: Event traffic does not block access to the UCSF emergency room entrance for emergency vehicles or patients on Mariposa Street between I-280 and Third Street.
5. Pedestrian Flows: Pedestrians do not spill out of sidewalks onto streets with moving vehicles, or out of crosswalks when crossing the street.
6. Bicycle Parking: Signage is clearly visible to direct bicyclists to event valet and other bicycle parking, and ensure that adequate bicycle parking supply is provided to accommodate a typical peak event.
7. Transit Mode Share: All Muni light rail and special event shuttle passengers are able to board their transit vehicle within 45 minutes following an event.
8. Good Neighbor: Mission Bay TMA shuttles continue to run and maintain capacity for simultaneous neighborhood use.

10.2 MONITORING METHODS

The following methods will be employed to monitor TMP strategies.

1. Quarterly Coordination Meetings – the on-site Transportation Coordinator and key Event Center staff will meet quarterly with the City's designated representative, SFMTA TDM Manager, other key City staff, and other transportation service providers to evaluate the TMP strategies throughout the life of the project.
2. Inaugural Event Monitoring – a designated team of Event Center and City staff will monitor pre-event and post-event transportation conditions at several of the first Warriors' games and concerts held at the Event Center, per Performance Standards described in Section 10.4 and relevant adopted City standards.

3. Subsequent Event Monitoring - a designated team of Event Center and City staff will monitor pre-event and post-event transportation conditions intermittently during the first four years of operation at the Event Center, per Performance Standards described in Section 10.4 and relevant adopted City standards.
4. Curb Pick-Up and Drop-Off Operations – the on-site Transportation Coordinator will regularly monitor curb operations during the first year of operation.
5. Event Attendee Surveys – annual travel surveys of at least 600 attendees⁵ will be conducted at five weekday evening games and at one of each other event type (including a dual-event scenario, if one occurs) at the Event Center. The surveys will identify such data as pre-event origin and post-event destination, arrival and departure times, arrival and departure modes, transit provider, parking location, number of vehicle occupants (auto mode), etc.
6. Event Center Development Employee Surveys – annual travel surveys of permanent and temporary employees will be conducted to identify the same travel information for Warrior employees as well as to determine their awareness of alternative modes and travel demand management programs that are available to them. Warriors will commit to a minimum of 60 percent survey completion rate.
7. Mission Bay Neighbor Surveys – travel surveys will be conducted during the initial year at the Event Center to identify the same travel information for local residents and employers, who will be contacted via the Mission Bay Citizens Advisory Committee (CAC) distribution list. The results of these surveys will be shared and discussed with the CAC as requested.
8. UCSF Surveys –travel surveys will be conducted during the initial year at the Event Center to identify the adequacy of access for emergency vehicles and personal to the UCSF hospital center and children’s emergency room. Surveys will include UCSF campus staff and emergency personnel.
9. Parking Strategies – data will be collected on parking utilization rates, and effectiveness of on-site and off-site remote parking strategies, for all event and no-event types.

10.3 MONITORING DOCUMENTATION

The results of the monitoring process will be documented as follows.

1. TMP Travel Survey Memo – a memorandum will be prepared within three months of the inaugural events (NBA game, concert, and convention) that documents the results of the travel surveys as well as ongoing event monitoring.
2. TMP Monitoring Report – a report will be developed and submitted to OCII annually, beginning at the end of the first year of operation of the Event Center Development, that addresses how effectively the TMP is meeting the monitoring objectives described above, while also proposing changes, adjustments, and improvements to the TMP and TDM as needed. The survey will be developed in coordination with SFMTA and OCII.

⁵ Comparable to surveys conducted at other new, urban multi-purpose venues (including Barclays Center in Brooklyn, NY).

10.4 PERFORMANCE STANDARDS

The TMP includes various performance measures once the project is in operation and initial monitoring results are available, the results will be measured against these criteria. If not achieved, the Warriors will be required to work with the appropriate agency or stakeholder group to ensure that the standards are met. The following performance standards have been developed:

1. Weekday Auto Mode Share: Targeted average auto mode share should be no greater than 53 percent for weekday peak event arrivals (6:00 PM – 8:00PM).
2. Weekend Auto Mode Share: Targeted average auto mode share should be no greater than 59 percent for weekend peak event arrivals (6:00 PM – 8:00PM).
3. Vehicle Queuing on City Streets: Traffic entering the parking garage from eastbound 16th Street does not spill back to 16th Street or back to the 3rd Street intersection due to garage ingress.
4. Vehicle Queuing on City Streets: Event traffic will not block access to the UCSF Emergency Room entrance for emergency vehicles or patients on Mariposa Street between I-280 and 3rd Street.
5. Pedestrian Flows: Pedestrians do not spill out of sidewalks onto streets with moving vehicles, or out of crosswalks when crossing the street.
6. Bicycle Parking: Signage is clearly visible to direct bicyclists to event valet and other bicycle parking, which has an adequate supply to accommodate a typical peak event.
7. Transit Mode Share: All Muni Metro and additional shuttle passengers are able to board their transit vehicle within 45 minutes following an event.⁶
8. Good Neighbor Policy: Mission Bay TMA shuttles continue to run and maintain capacity for simultaneous neighborhood use.

In the event that ongoing monitoring shows at any time that the performance standards outlined above are not being met, the Warriors will explore additional travel demand strategies, operational efforts, or minor redesigns to meet the goals of this TMP. Revisions to policy will be brought before the Mission Bay CAC, which includes representatives from UCSF, as requested by that body for public comment prior to implementation. A representative list of possible strategies is as follows:

1. Increase Warriors contribution to the Mission Bay TMA to directly fund incremental, event-only service, which may include additional shuttle bus purchases and/or expanded hours of operation.

⁶ 45 minutes has been deemed an appropriate period of time given the anticipated time patrons will spend egressing from the building, crossing the 3.2 acre plaza, locating the appropriate transit stop for their final destination, and queuing accordingly. It reflects anticipated delay by some patrons who may remain in the Event Center following an event's end to take advantage of promotions, watch post-game interviews, etc., and by other guests who may patronize the retail businesses located on-site following an event but prior to leaving Mission Bay.

2. Establish a partnership with a private shuttle provider for incremental, event-only service to and from satellite parking locations (if designated) or transit centers.
3. Facilitate charter bus/private shuttle program purchases for group ticket sales and/or suite purchases for events. Reduce the project parking demand through a variety of mechanisms, including pricing.
4. Explore partnerships with car-sharing services (e.g., Zipcar, City CarShare) for spaces on-site to reduce car ownership amongst employees.
5. Expand media campaigns, including in social media, which promote walking and/or bicycling to the event center.
6. Conduct cross-marketing strategies with event center businesses (e.g., 10 percent off merchandise/food if patrons arrive by transit and/or bike or on foot).
7. Carry out public education campaigns.
8. Offer special event ferry service to the closest ferry station to the project site (similar to the existing service provided between AT&T Park and Alameda, Marin and Solano Counties by Golden Gate Transit, Alameda/Oakland and Vallejo ferry service).
9. Provide transit fare subsidies to event ticket holders.
10. In consultation with the SFMTA, remove any street furniture or landscaping obstructing pedestrian paths of travel or Muni staging areas.
11. Cooperate with future City efforts for active interventions to effectively manage and price the parking supply in the project vicinity to reduce traffic congestion.

**APPENDIX A:
EVENT ACTIVITY SEQUENCES**

Typical Warriors Game Sequence (7:30 pm tip off)

Day Prior 2 to 4 pm	If the game is nationally televised (5-7 games per year), 1-2 TV trucks for the national broadcaster(s) will typically arrive the day before the game. Trucks are parked in the loading dock and technicians will begin to setup for game broadcast.
Game Day 7 am to noon	Game day food service deliveries at loading dock (scheduled around TV broadcast and team arrival and departures). Average Time of delivery is scheduled to avoid peak commute hours and other factors that may influence efficiency and impact. Average individual deliveries required per Warriors game is six. Most if not all are scheduled to occur the day prior.
9 am	<p>Food service prep team arrives. Typically 25 to 35 game day personnel plus approximately 30 baseline staff. Staff will arrive on foot and be encouraged to use public transit.</p> <p>Home and visiting team TV trucks (<i>2 trucks</i>) arrive and deploy in the loading dock. If trucks are in market and the dock is available, they may arrive the day before the event. Typical call is morning on game day. The trucks can arrive as late as early afternoon.</p>
10 am	<p>TV broadcasting crew arrives one hour following TV truck arrival and begins to prepare for the game broadcast. Typically 40 personnel total. The crew arrives via the loading dock.</p> <p>Pre-game shoot around. Visiting teams will in some cases use an off-site venue for shootaround. Specific times vary. The window is typically 10 am to 1 pm. Typically 25 personnel per team. Visiting team arrives in two buses. Home team arrives individually. After pre-game shoot around, visiting players and coaches and home team players will typically leave the building. The visiting team arrives and departs via the loading dock. The home team will either use the loading dock or segregated parking in the Event Center garage.</p>
1 pm	Building pre-cleaning crew arrives. This practice varies from building to building and is more common for outdoor venues. Personnel vary based on event type and general building practice. Likely 15 to 20 total. In some cases, there is no pre-clean. In others, the pre-clean happens early in the morning on game day. The crew will arrive at the staff entrance on foot and be encouraged to use public transit.
5 to 5:30 pm	Teams return for the game. The visiting team will arrive in two buses via the loading dock. The home team will either use the loading dock or segregated parking in the Event Center garage.
5 to 6 pm	Game day building staff arrives. Includes guest service and food service personnel. Typically 500 to 600 total. Staff will arrive at the staff entrance on foot and be encouraged to use public transit.
5:30 to 6 pm	Police, building security, and guest services personnel deploy to manage guest ingress approximately 30 minutes prior to doors.

6 to 6:30 pm	Doors open 60 to 90 minutes prior to tip off. Guests begin to arrive. We anticipate that approximately 80% of guests will access the building via the entrance at the main plaza. Arrival distribution varies slightly based on day of week and market dynamics. 80% to 90% of guests are in the building by tip off. Final guests typically enter by the end of the first quarter.
7:30	Tip off.
9:30 pm	Police, building security, and guest services personnel deploy to manage guest egress approximately 30 minutes prior to anticipated game end.
10 pm	Game ends. Broadcast technicians immediately begin load-out. Cleaning crew arrives and immediately begins post-show clean. Typically 25 to 50 personnel. The crew will arrive at the staff entrance on foot and be encouraged to use public transit. Change over crew arrives and immediately begins change over. Typically 20 personnel. The crew will arrive at the staff entrance on foot and be encouraged to use public transit.
11 to 11:30 pm	Venue clear of guests and all event staff.
Day After Game	
11:30 pm to 12 am	TV trucks leave the venue.
2 to 3 am	Post-game clean complete, cleaning crew leaves the building.
4 am	Change over complete. Crew leaves the building.

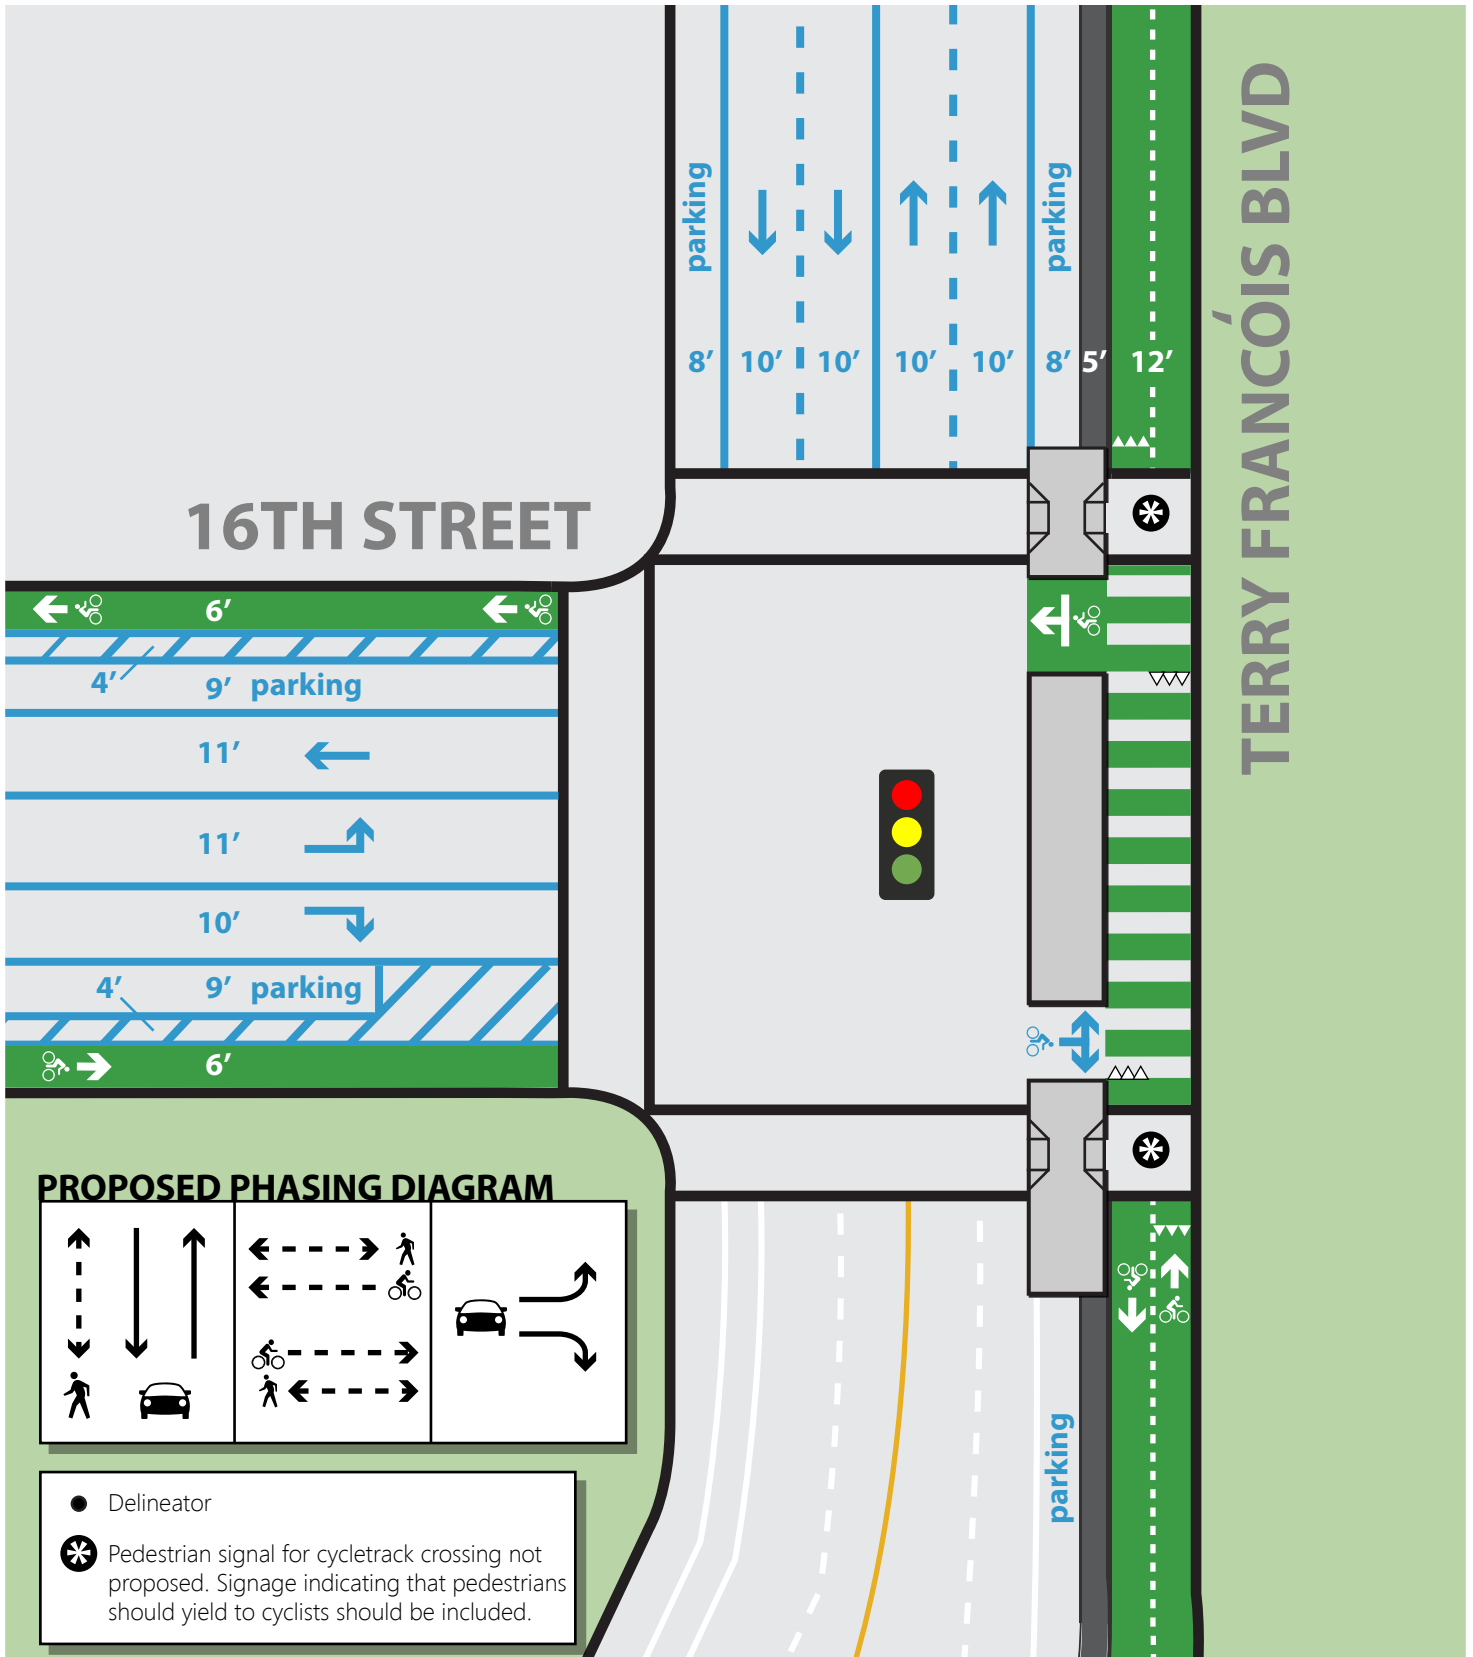

Typical Concert Sequence (7:30 pm Show Time)

Event Day 4 to 8 am	Show trucks (which carry all show components including the stage, sound equipment and controls, video equipment and controls, props) arrive in market. They will typically stage somewhere off site but close to the venue. The number of trucks varies based on the size and complexity of the show. An A list show will usually require approximately 20 trucks. Once trucks have been unloaded, they are driven off site and will not return until the show is complete and the load-out process begins.
6 to 8 am	The production team (15 to 30 personnel for A list shows) arrives at the venue as does the local stagehand crew. Initial production trucks access the loading dock and show load-in commences. The production team will arrive in tour buses and access the building via the loading dock. The stagehand crew will arrive on foot and be encouraged to use public transit. The show trucks enter and exit the venue as the show components are unloaded. Load-in typically occurs over approximately four to six hours.
7 am to noon	Event day food service deliveries at loading dock (scheduled around other event related arrivals and departures). Average individual deliveries required are six. Most if not all are scheduled to occur the day prior.
9 am	Food service prep team arrives. Typically 25 to 35 event day personnel plus approximately 30 baseline staff. Staff will arrive on foot and be encouraged to use public transit.
1 pm	Building pre-cleaning crew arrives. This practice varies from building to building and is more common for outdoor venues. Personnel vary based on event type and general building practice. Likely 15 to 20 total. In some cases, there is no pre-clean. In others, the pre-clean happens early in the morning on event day. The crew will arrive at the staff entrance on foot and be encouraged to use public transit.
2 to 4 pm	Performer(s) arrive(s) for sound check. Sound check typically lasts 30 to 60 minutes. The performer(s) will arrive in tour buses via the loading dock.
5 to 6 pm	Event day building staff arrives. Includes guest service and food service personnel. Typically 500 to 600 total and varies based on show type and expected attendance. Staff will arrive at the staff entrance on foot and be encouraged to use public transit.
5:30 to 6 pm	Police, building security, and guest services personnel deploy to manage guest ingress approximately 30 minutes prior to doors.
6 to 6:30 pm	Doors open 60 to 90 minutes prior to show time. Guests begin to arrive. We anticipate that approximately 80% of guests will access the building via the main entrance for Event Center shows, and 80% will access the building via the main theatre entrance for theatre shows. Arrival distribution varies slightly based on day of week and market dynamics. 90%+ of guests are in the building by show time. Final guests typically enter within another 30 minutes following show time.
7:30 pm	Show time.

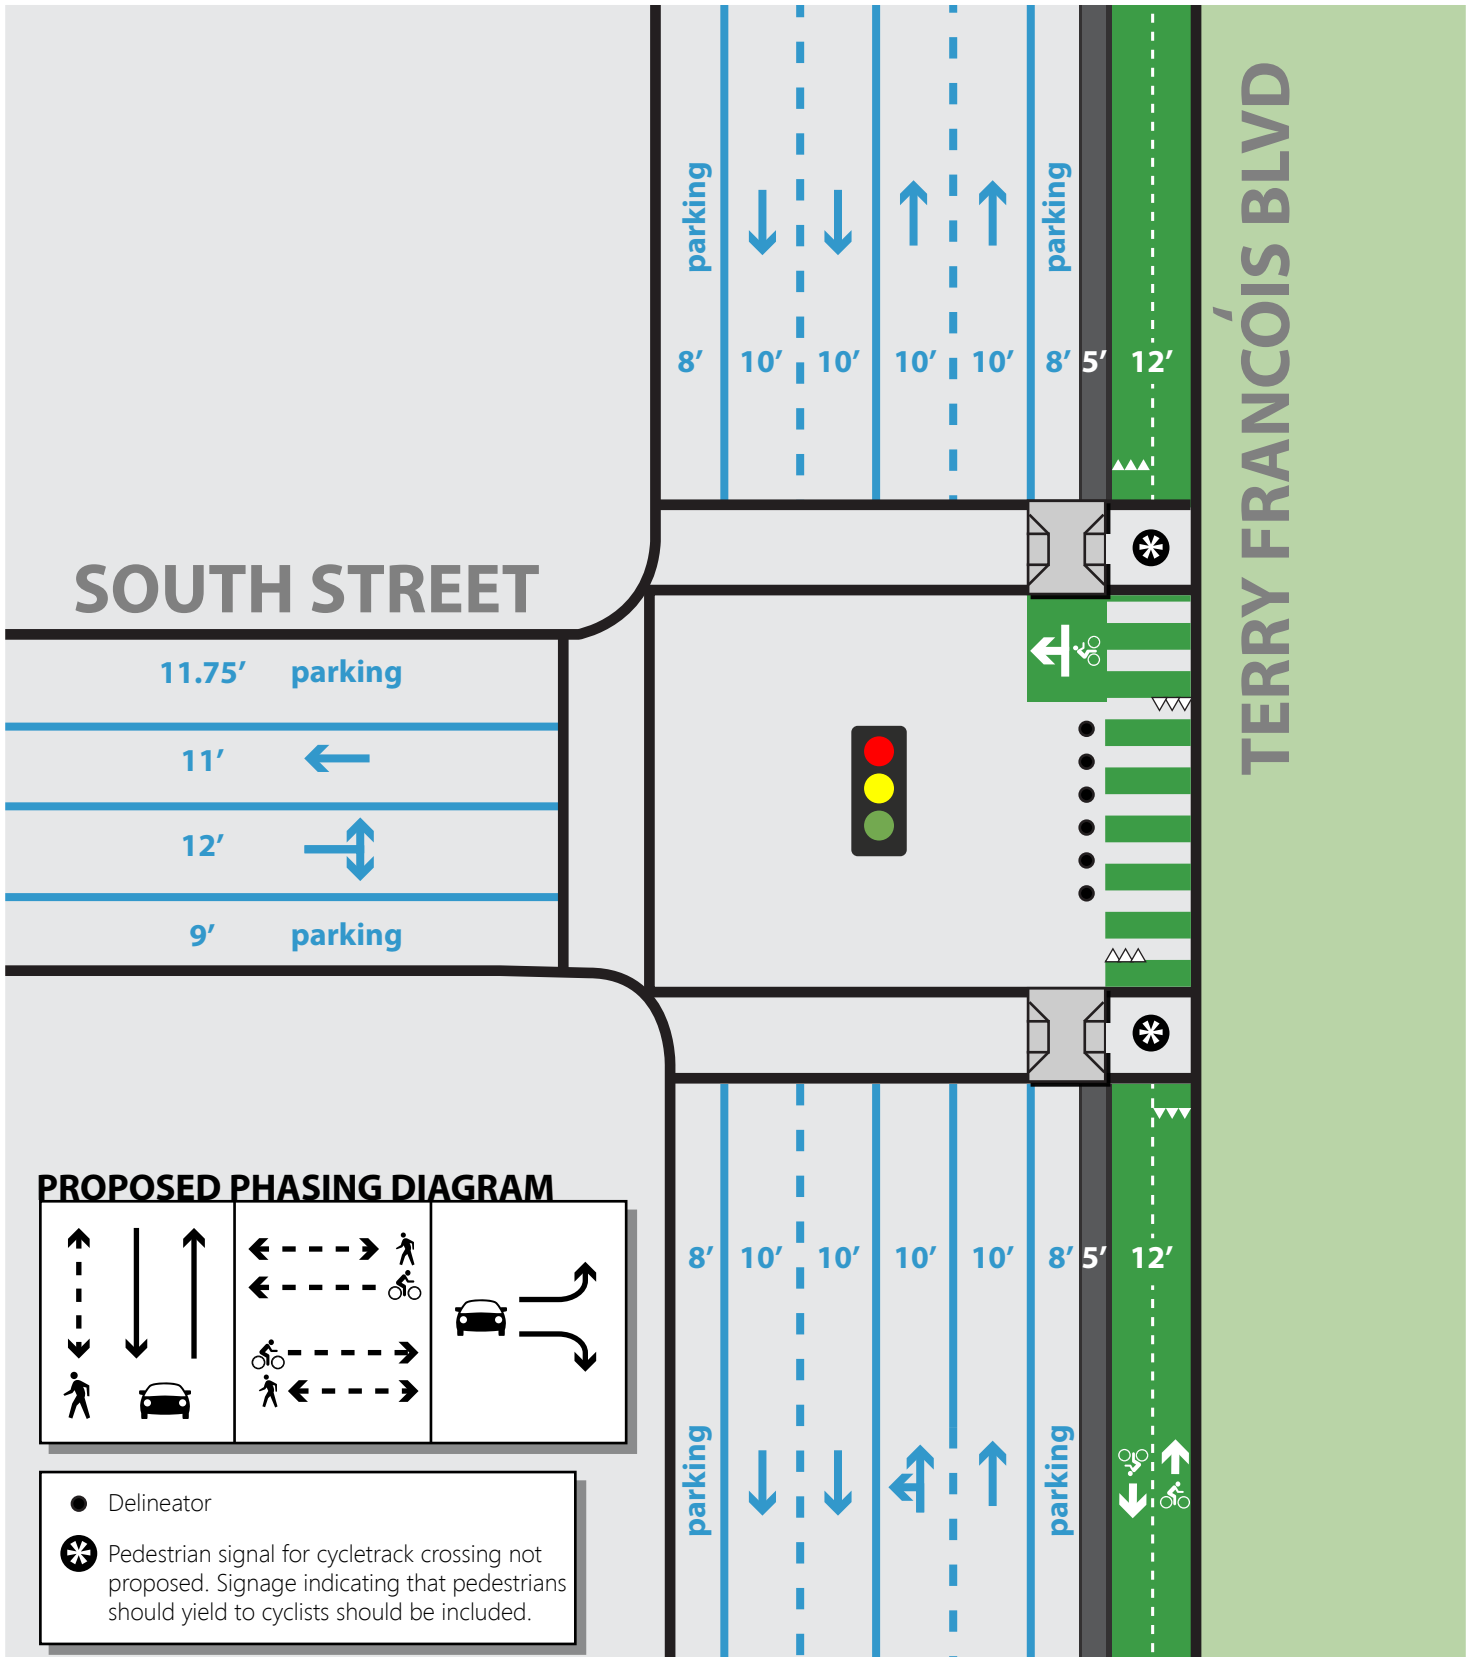

10 pm	Police, building security, and guest services personnel deploy to manage guest egress approximately 30 minutes prior to anticipated show end.
10:30 pm	Show ends. Production team immediately begins load-out. Cleaning crew arrives and immediately begins post-show clean. Typically 25 to 50 personnel. The crew will arrive at the staff entrance on foot and be encouraged to use public transit. Change over crew arrives. Typically 20 personnel. The crew will arrive at the staff entrance on foot and be encouraged to use public transit.
11:30 to 12 am	Venue clear of guests and all event staff.
Day After Event	
1 to 3 am	Show trucks leave the venue.
2 to 3 am	Post show clean complete, cleaning crew leaves the building.
4 am	Change over complete. Crew leaves the building.

TRANSPORTATION ANALYSIS SCOPE OF WORK

**SAN FRANCISCO
PLANNING DEPARTMENT**

**TRANSPORTATION STUDY
SCOPE OF WORK
ACKNOWLEDGEMENT AND APPROVAL**

Date: August 19, 2014

Transmittal To: LCW and Adavant Consultants, Transportation Consultants

The proposed scope of work for the Golden State Warriors Event Center and Mixed Use Development on Mission Bay Redevelopment Area Blocks 29-32, dated August 2014 is hereby

- Approved as submitted
- Approved as revised and resubmitted
- Approved subject to comments below
- Not approved, pending modifications specified below and resubmitted

Signed:  Transportation Planner
 Environmental Review Planner

Note: A copy of this approval and the final scope of work are to be appended to the transportation study. The Department advises consultants and project sponsors that review of the draft transportation report may identify issues or concerns of other City agencies not addressed in the scope of work hereby approved, and that the scope of work may need to be modified to accommodate such additional issues.

Scope of Work

Transportation Analysis for the proposed Event Center and Mixed Use Development at Mission Bay South Area Blocks 29-32 EIR

Final: August 13, 2014

Adavant Consulting and LCW Consulting are pleased to submit this scope of work to prepare the transportation section of the Environmental Impact Report (EIR) for the proposed event center and sports arena to be located in the Mission Bay South Area of San Francisco. This scope of work follows the San Francisco Planning Department's "Transportation Impact Analysis Guidelines for Environmental Review, October 2002" (*SF Guidelines*), as applicable.

Task 1 – Conduct Project Scoping

The San Francisco Planning Department requires that the scope of work for the transportation analysis be reviewed and approved by the designated transportation planner and environmental staff coordinator prior to commencement of any work by the transportation consultants. The transportation consultants will meet and consult with Environmental Planning staff, the Office of Community Investment and Infrastructure (OCII), and other city agencies, as determined by Environmental Planning to review, discuss and modify the draft scope of work and define the required level of detail for the transportation analysis. The discussions will focus on items such as:

- Project definition and components, including alternatives;
- Data collection (traffic counts, locations, day of week, and time of day);
- Assumptions (study area, land use types, cumulative growth, etc.);
- Methodology (trip generation methodology and appropriate sources, travel forecasts, etc.);
- Analysis scenarios (future years, development and transportation network and transit service assumptions);
- Extent of analysis of the alternatives to the proposed project; and
- Transportation section schedule and deliverables.

Event Center at Mission Bay South Area Blocks 29-32
2012.0718E – Final Transportation Scope of Work

August 13, 2014
Page 1

Task 2 – Develop Project Description and Analysis Methodology

The transportation consultants will review the project definition, land use, and transportation circulation assumptions prepared by the project sponsor and will provide written request for clarification and additional data needs that might be necessary to conduct the transportation analysis.

The transportation consultants will meet with Environmental Planning staff to confirm the definition of analysis scenarios and direction on the analysis methodologies proposed for the transportation impact assessment. The travel demand analysis of the land use program of the proposed project (e.g., office, retail, restaurant, movie theater) will be conducted using the *SF Guidelines*, while the travel demand analysis for the arena and other ancillary sport uses will be conducted based on proposed arena seated capacity, travel characteristics at similar facilities (e.g., mode of travel, trip distribution, vehicle occupancy, parking demand, etc.), anticipated transportation infrastructure improvements, and proposed access and egress routes to and from the site. For the live theater use, the travel demand analysis will be based on the number of seats, sell-out conditions with one performance on weekdays and two performances (one matinee and one evening) on a Saturday. The analysis will assume movie theater and live theater functions taking place concurrently with an event at the event center.

The transportation consultants will define the analysis scenarios in detail. Table 1 on the next page presents the list of transportation analysis scenarios for the proposed project components.

The transportation consultants will prepare a technical memorandum documenting the travel demand methodology, and assumptions for the arena and other proposed uses. The memorandum will include a description of each of the analysis scenarios and assumptions used for the impact analysis, including land use, background, project-related transportation improvements, background traffic assumptions, and parking assumptions. The proposed project travel demand will be presented for each analysis scenario. This technical memorandum will be presented to the Planning Department for review and approval prior to proceeding with the transportation impact analysis. It is anticipated that SFMTA will also review and provide feedback on this technical memorandum.

The transportation consultants will work with Environmental Planning and the project sponsor to develop the definition of the project alternatives.

Table 1 - Scenarios for Transportation Analysis
Event Center at Mission Bay Blocks 29-32

SCENARIOS	WEEKDAY PERIODS						SATURDAY		Number of Analysis Scenarios
	PM COMMUTE (4 To 6 PM)		EVENING (6 to 8 PM)		LATE PM (9 - 11 PM)		EVENING PERIOD (7 to 9 PM)		
	w/out SF Giants Game	with SF Giants Game	w/out SF Giants Game	with SF Giants Game	w/out SF Giants Game	with SF Giants Game	w/out SF Giants Game	with SF Giants Game

Project – with Event at arena									
- with Basketball Game	1						1		2
- with Convention Event	1								1
TOTAL	7	2	2	2	2	2	5	2	24

Task 3 – Data Collection

Traffic, pedestrian, bicycle and off-street parking data collection will be conducted for the following time periods:

- Weekday p.m. peak commute period (4 to 6 p.m.) with no event at AT&T Park
- Weekday evening period (6 to 8 p.m.) with no event at AT&T Park
- Weekday late evening period (9 to 11 p.m.) with no event at AT&T Park
- Saturday evening (7 to 9 p.m.) with no event at AT&T Park
- Weekday p.m. peak commute period (4 to 6 p.m.) with game at AT&T Park
- Weekday evening period (6 to 8 p.m.) with game at AT&T Park
- Weekday late evening period (9 to 11 p.m.) with game at AT&T Park
- Saturday evening (7 to 9 p.m.) with game at AT&T Park

Traffic: The transportation consultants will obtain intersection turning movement volume counts at the 21 study intersections listed in Table 2a for the proposed project site from previously collected traffic count efforts, supplemented with new counts performed in May (May 15th, 20th, 21st, 27th, 29th, and 31st) and June (June 7th and 11th) 2014, as appropriate (and previously approved by the Planning Department).

Table 2a - Intersection Analysis Locations

Location	Location
1 King St/Third St	11 Terry Francois Blvd/16 th St ^[a]
2 King St/Fourth St	12 Illinois St/16 th St
3 King St/Fifth St/I-280 on/off-ramps	13 Third St/16 th St
4 Fifth/Harrison/I-80 WB off-ramp	14 Fourth St/16 th St
5 Fifth/Bryant/I-80 EB on-ramp	15 Owens St/16 th St
6 Third St/Channel St	16 Seventh St/Mississippi St/16 th St
7 Fourth St/Channel St	17 Illinois St/Mariposa St
8 Seventh St/Mission Bay Drive	18 Third St/Mariposa St
9 Terry Francois Blvd/South St	19 Mariposa St/I-280 NB off-ramp
10 Third St/South St	20 Mariposa St/I-280 SB on-ramp
	21 Third St/Cesar Chavez St

Note:
 [a] Future analysis location - not currently an intersection. Sixteenth Street is not continuous between Illinois Street and Terry François Boulevard and will be extended from Illinois Street to Terry François Boulevard as part of the proposed project.

The transportation consultants will also gather on-ramp and off-ramp traffic data from Caltrans and from peak period turning movement volume counts at ramp touchdown intersections for the I-80 and I-280 ramp locations shown in Table 2b. Freeway on-ramps and off-ramps will be analyzed based on peak hour volumes. Freeway ramp volume data will be obtained from the intersection traffic counts listed in Table 2a and supplemented, as necessary.

Table 2b – Freeway Ramp Analysis Locations

Location	Location
1 I-80 EB on-ramp at Sterling/Bryant	4 I-280 SB on-ramp at Pennsylvania
2 I-80 EB on-ramp at Fifth/Bryant	5 I-280 NB off-ramp at Mariposa
3 I-80 WB off-ramp at Fifth/Harrison	6 I-280 SB on-ramp at Mariposa

Transit: Transit data will be obtained from SFMTA and regional transit operators, as appropriate, for weekday p.m., evening, late evening, and Saturday evening conditions. The transportation

consultants will compile data on all Muni bus routes and rail lines (including motor coach, trolley coach, and light rail service) and stop locations within a study area generally bounded by Townsend Street, Seventh Street, Mississippi Street, and 18th Street.

This work will include a description of Muni’s transit route service hours, peak periods, stops and headways on weekdays and Saturdays for the bus routes and rail lines within the study area. The latest available weekday p.m., weekday evening, late evening, and Saturday evening peak hour ridership and capacity utilization at the maximum load points (MLP) for the Muni routes and lines serving the transportation study area will be requested from Muni for the days and time periods listed in Table 1 (p. 3).

Existing ridership and capacity utilization information for the Muni bus routes and rail lines will be provided individually, as well as combined, based on access between the transportation study area and the four San Francisco superdistricts.

Preliminary corridor grouping of Muni routes and lines for the project site (subject to discussion with the SFMTA):

- North/South: K Ingleside, T Third, N Judah, 30 Stockton, 45 Union Stockton.
- East/West: 10 Townsend, 22 Fillmore, 47 Van Ness.

The transportation consultants will also compile data on regional transit operators (BART, AC Transit, Golden Gate Transit bus and ferry service, SamTrans and Caltrain) including the nearest transit stop location within the study area boundary and the latest scheduled operations on weekdays and Saturdays. Weekday and Saturday ridership and capacity utilization for the regional service providers for the analysis periods identified in Table 1 (p. 3) will be obtained from the regional operators.

The two existing shuttle systems (i.e., the Mission Bay Transportation Management Association and the UCSF shuttle systems) in the vicinity of the project site will be described (e.g., routes, headways, hours of operation, restrictions on use, and ridership and capacity, if available).

Existing Muni and regional service provider weekday p.m. peak hour screenlines will be obtained from the Planning Department.

Pedestrians: The transportation consultants will collect pedestrian counts at 15-minute intervals for the days and time periods listed in Table 1 (p. 3) at the locations shown in Table 3, with the exception that weekday late evening period (9 to 11 p.m.) without a game at AT&T Park will not be conducted because very few pedestrians are present at the study locations during the late evening period. Effective sidewalk widths will be measured at each sidewalk analysis location, and in the vicinity of the project site.

Table 3 - Crosswalk and Sidewalk Analysis Locations ^[a]

Location	Location
Crosswalk Analysis ^[a]	Sidewalk Analysis
1 Third St/South St	1 Both sides of Third St between South and 16 th streets
2 Third St/16 th St	2 North side of 16 th St ^[b]
3 Terry Francois Blvd/South St ^[b]	3 South side of South St ^[b]

Notes:
 [a] All crosswalks at the listed intersections.
 [b] Future analysis location.

Bicycles: The transportation consultants will conduct bicycle counts at 15-minute intervals for the days and time periods listed in Table 1 (p. 3) at the locations shown in Table 4, with the exception that weekday late evening period (9 to 11 p.m.) counts without a game at AT&T Park will not be conducted because very few bicyclists are present at the study locations during the late evening period.

Table 4 - Bicycle Analysis Locations

Location
1 Both sides of Third Street between South and 16 th streets
2 Both sides of 16 th Street between Third and Fourth streets
3 Terry Francois Boulevard between South and 16 th streets

Parking: The parking study area is generally bounded by Townsend Street, Seventh Street, Mississippi Street, and 18th Street. The transportation consultants will collect off-street public parking supply and occupancy for the days and time periods listed in Table 1 (p. 3) from available sources such as the SFpark, SFMTA, data previously collected for the Piers 30-32 site, and other project technical studies, and conduct additional surveys for facilities and time periods for which parking supply and occupancy data is not available. Current hours of operation and characteristics such as whether they are publicly accessible, of the off-street facilities will be identified.

The transportation consultants will also document current on-street parking regulations and illegal parking on the blocks adjacent to the proposed project, and generally describe the on-street parking regulations and parking occupancy within the parking study area. Any loading observations will also be noted.

Task 4 – Document Existing Conditions

Using the data collected in Task 3, the transportation consultants will document existing traffic, transit, parking, pedestrian, bicycle, loading, and emergency vehicle access conditions within the transportation study areas and at the study intersections shown in Table 2a, including:

- A base map and text for the study area, describing the street designations, street names, number of lanes and traffic flow directions;
- A description of existing uses and vehicular access to the project site;
- An assessment of existing parking operations at the project site, including hours of operation, supply and hourly utilization;
- Intersection level of service (LOS) conditions during the peak hours at the study intersections identified in Table 2a using the 2000 Highway Capacity Manual operations methodology (HCM 2000) and the Synchro traffic analysis software;
- Freeway on-ramp and off-ramp LOS conditions during the peak hours at the study locations identified in Table 2b using the 2000 HCM methodology and the HCS analysis software. Freeway on-ramp junctions will be quantitatively evaluated based on the HCM 2000 merge/diverge methodology. Vehicle queuing at freeway off-ramps will be quantitatively assessed based on field observations and intersection HCM 2000 LOS results.
- Graphics indicating the existing peak hour traffic volumes and lane configuration at the study intersections identified in Table 2a;
- A map and discussion of Muni and regional transit services within the transportation study area, including bus routes and bus stop locations, as well as conditions at each route’s maximum load point. A quantitative description of weekday p.m. commute period, weekday evening, weekday late evening and Saturday evening peak hour transit conditions will be provided for Muni and the regional transit service as available. Planned changes to Muni service in the Transit Effectiveness Program (TEP) will also be described. Identification of any operational conflicts between buses or streetcars and other vehicles will be described.
- Pedestrian LOS analyses at the study locations identified in Table 3 using the HCM 2000 methodology. A qualitative assessment of pedestrian conditions (conflicts, safety and operational issues) will also be conducted;
- Bicycle flows at the study locations identified in Table 4, and a qualitative discussion of general bicycle circulation conditions and the identification of any safety and right-of-way issues in the vicinity of the project site, including the description and mapping of bicycle routes. A description of changes to the bicycle network within the transportation study area being considered by the San Francisco Bicycle Plan and other City proposals;
- A qualitative assessment of existing weekday and Saturday on-street commercial loading conditions within the transportation study area;
- A description of the existing emergency vehicle access routes to the project site;
- Passenger loading, including disabled loading and parking; and

- Quantitative assessment of off-street parking supply and utilization within the parking study area, and qualitative discussion of on-street parking regulations and utilization.

Task 5 – Determine Project and Project Alternatives Travel Demand

The future travel demand estimates will be developed by the transportation consultant, and reviewed and approved by Planning Department staff prior to use in the transportation impact assessment. Travel demand estimates will be provided for vehicular, transit, pedestrian, and bicycle modes, and will include internal and external trips for each project component listed in Table 1, as appropriate.

Sports Arena: Since sports arenas are considered “special generators,” each with unique trip generation and travel behavior patterns, the analysis of their impact cannot follow some of the methodologies presented in the *SF Guidelines*. Thus, the travel demand analysis for the operation of basketball games, conventions, and other events will be conducted based on proposed arena seated capacity, typical weekday and weekend start times of the games/events, available travel characteristics of other venues such as AT&T Park and other comparable venues (e.g., mode split, trip distribution, vehicle assignment, parking demand, transit demand), anticipated transportation infrastructure improvements, and proposed ingress and egress routes for the new arena. Loading demand for the arena will be based on information obtained from the project sponsor.

Other Project Land Uses: The transportation consultants will estimate the travel demand for standard proposed land uses (i.e., retail, office, restaurant, movie theater) using the methodology and information provided in the *SF Guidelines* (trip generation rates, mode splits, trip distribution, loading demand, parking demand). For the live theater use, trip generation will be based on the number of seats, sell-out conditions with one performance on weekdays and two performances (one matinee and one evening) on a Saturday. Since the *SF Guidelines* only provide trip generation rates for the weekday p.m. peak hour, weekday evening and weekday late evening travel demand will be estimated based on temporal distribution patterns contained within Pushkarev and Zupan’s *Urban Space for Pedestrians*, as well as other sources, as determined appropriate by the Planning Department. To determine Saturday evening travel demand appropriate adjustments will be made to obtain similar factors for the Saturday daily based on the Saturday to weekday daily ratio from *ITE Trip Generation Report, 9th Edition*, Pushkarev and Zupan’s *Urban Space for Pedestrians*, as well as other sources, as determined appropriate by the Planning Department.

The transportation consultants will estimate the number of vehicle trips associated with the existing parking lots located at the project site using the methodology described in the *SF Guidelines* (i.e., actual traffic data collected as part of Task 3, rather than trip generation estimates). Vehicles currently utilizing the existing surface parking facilities will be redistributed to park at other nearby off-street facilities based on their existing parking availability data obtained in Task 3.

Documentation: The transportation consultants will prepare a technical memorandum describing the assumptions, methodology and results of the travel demand for the proposed project component listed in Table 1 (p. 3). The technical memorandum will summarize the data sources, methodologies and recommended rates and factors to be used in the trip generation, mode choice, vehicle occupancies and parking demand analyses. The technical memorandum will summarize the travel demand estimates for the proposed project by land use type, mode of travel and place of origin. A graphic showing vehicle-trip distributions and assignments will also be included. This technical memorandum will be submitted to Planning Department staff in paper and electronic format for their

review and approval prior to performing the transportation impact analyses (Task 6 – Transportation Impacts Analysis). It is anticipated that this document will also be reviewed by OCII and SFMTA staff, as appropriate.

Alternatives: Travel demand estimates for up to two alternatives to the proposed project will be developed based on the methodology presented above for the proposed project uses. The scenarios and time periods of analysis will be based on the types and quantities of the land uses included in the alternative (e.g., trip generation for Saturday daily and evening peak hour conditions will not be prepared for an alternative including primarily office uses). The travel demand for the alternatives will be documented in a separate technical memorandum, and will be reviewed by Planning Department, OCII and SFMTA staff. See Task 8 for alternatives analysis.

Task 6 – Transportation Impact Analysis

The transportation consultants will identify the transportation impacts associated with the proposed project listed in Table 1 (p. 3). This will include impacts on the study intersections, impacts on transit (capacity utilization and operation), pedestrian circulation, bicycle circulation, passenger and freight loading supply and demand conditions, construction related activities, and emergency vehicle access to the site. A parking supply and demand analysis will also be presented for informational purposes.

The transportation impact analysis will reflect planned improvements to the transportation network (e.g., relocation and realignment of Terry Francois Boulevard with the eastern edge of Blocks 30 and 32), any changes/features included as part of the proposed project (e.g., wider sidewalks, plazas, adjacent bicycle lanes), as well as the draft Transportation Management Plan for events at the proposed arena.

TASK 6.1 – TRAFFIC IMPACTS

The transportation consultants will calculate peak hour intersection and freeway ramp LOS using the HCM 2000 methodology for the study intersections identified in Table 2a for the following overall scenarios:

- Existing plus Project
- Future year 2040 Cumulative - no Event
- Future year 2040 Cumulative - with Event

Table 1 on page 3 details the number of Existing plus Project and cumulative scenarios and the time periods of analysis.

The traffic volumes at the study intersection and freeway ramps for the 2040 Cumulative conditions will be based on the estimates from the latest travel demand forecasting data available from the San Francisco County Transportation Authority (SFCTA). The future cumulative traffic conditions at the study intersections and ramps will account for the vehicle trips generated by the proposed project, as well as the general increase in activity in the area.

The proposed project’s contribution to the traffic volumes at the study intersections and freeway ramps will be shown in an Existing plus Project traffic volume figure for each analysis period/scenario, which will also identify the critical movement at each location. Based on this

information and the estimated growth in traffic volumes between existing and year 2040 conditions, the transportation consultants will calculate the proposed project contribution to future cumulative conditions at those intersections operating at LOS E or LOS F under 2040 Cumulative conditions, as specified in Table 1 (p. 3). A series of 2040 Cumulative volume figures will then be prepared, identifying the critical movements at each intersection for the various cumulative scenarios.

A vehicle queuing analysis will be conducted at the entrance(s) to the on-site parking facilities, or other nearby off-street parking locations for Existing plus Project scenarios.

Freeway on-ramp junctions will be quantitatively evaluated based on the HCM 2000 merge/diverge methodology. Vehicle queuing at freeway off-ramps will also be quantitatively assessed based on field observations and intersection HCM 2000 LOS results at the freeway off-ramp intersections listed in Table 2b. The analysis will discuss the potential for project to exacerbate existing queuing; project's contributions to traffic on- and off-ramps will be summarized. Because these on-ramps are frequently operating over-capacity during the peak hours, the transportation team will work with the Planning Department to identify a methodology for describing the project's contribution to these conditions.

TASK 6.2 – TRANSIT IMPACTS

The transportation consultants will calculate transit capacity utilization for Muni and the regional transit providers for the following overall scenarios:

- Existing plus Project
- Future year 2040 Cumulative - no Event
- Future year 2040 Cumulative – with Event

Table 1 on page 3 details the number of Existing plus Project and cumulative scenarios and the time periods of analysis.

A transit impact analysis will be conducted for:

- Muni and regional screenlines – weekday p.m. commute peak hour
- Muni and regional routes serving the transportation study area, by individual route/line and by corridor – weekday p.m., weekday evening, weekday late evening and Saturday evening

The transit ridership and capacity for the 2040 Cumulative conditions will be based on the estimates from the latest travel demand forecasting data available from the San Francisco County Transportation Authority (SFCTA), as obtained from the Planning Department and SFMTA. The future cumulative transit conditions will account for the transit ridership generated by the proposed project, as well as the general increase in activity in the area.

The proposed project's contribution to the transit capacity utilization will be estimated, and contributions where 2040 Cumulative conditions exceed the transit operator capacity utilization standard will be identified.

A qualitative assessment of Existing plus Project conditions at the Muni Metro platform on Third Street at South Street will be conducted before and after weekday basketball and non-basketball events, subject to discussion with SFMTA.

TASK 6.3 – PEDESTRIAN IMPACTS

The transportation consultants will perform peak hour pedestrian LOS analyses of Existing plus Project conditions listed in Table 1 (p. 3) at the study locations identified in Table 3 using the HCM 2000 Methodology based on the number of new pedestrians that will be added to the network. Potential pedestrian safety issues will be identified, including vehicular-pedestrian conflicts, interruption of pedestrian circulation and potential safety issues. A qualitative discussion of the project's compliance with the Mission Bay South Area Plan will also be included. Future year 2040 Cumulative pedestrian conditions will be assessed qualitatively.

TASK 6.4 – BICYCLE IMPACTS

The transportation consultants will qualitatively evaluate bicycle conditions for the Existing plus Project scenarios listed in Table 1 (p. 3) at the study locations identified in Table 4. Potential bicycle circulation safety issues will be identified, including bicyclist-vehicular conflicts, interruption of bicycle flow and potential safety issues at the project site, as well as the effect on existing and proposed nearby bicycle routes. In addition, the Mission Bay South Area Design for Development (D4D)¹ requirements for bicycle parking and related facilities will be identified and compared to the proposed supply. Future year 2040 Cumulative bicycle conditions will be assessed qualitatively.

TASK 6.5 – LOADING IMPACTS

The transportation consultants will prepare a loading supply/demand analysis for the proposed project. The proposed on-site loading supply will be compared to the Mission Bay South Area D4D in terms of their location, number of spaces and minimum dimensions, as applicable. The loading supply will also be compared to the estimated demand generated by the proposed project. Additionally, the transportation consultant will assess the proposed loading facilities in terms of their operational characteristics, including truck movement (including truck turning pathways into the loading area), location of trash compactor, storage and removal of garbage.

Passenger loading/unloading, including taxis, charter buses, limousines, and private autos, before and after events at the proposed arena passenger loading/unloading facilities will be assessed.

TASK 6.6 – EMERGENCY ACCESS IMPACTS

The transportation consultants will assess any potential impacts to the emergency access that could result from the proposed project.

TASK 6.7 – CONSTRUCTION IMPACTS

The transportation consultants will qualitatively assess any potential temporary construction-related transportation impacts that would be generated by the proposed project. Construction impact

¹ In combination with the Development Plan, the Mission Bay South Area Design for Development (D4D) document supersedes the San Francisco *Planning Code* for the Mission Bay South Area Development Plan.

evaluation will address displacement of existing parking, the staging and duration of construction activity, truck routings, estimated daily truck volumes, street and/or sidewalk closures, impacts on Muni operations, and construction worker parking.

TASK 6.8 – PARKING IMPACTS

The transportation consultants will prepare a parking supply/code/demand analysis for the proposed project. Handicapped-accessible, bicycle and carshare spaces supplied by the proposed project will be identified. The proposed parking supply will be compared to the requirements of the Mission Bay South Area D4D. Any exceptions to the Mission Bay South Area D4D will be noted.

Any deficit or surplus of parking spaces will be quantified, and discussed in relation to the effect on the parking supply in the area surrounding the project sites. The design of the access to the proposed project's parking facilities will be assessed in terms of operational characteristics.

As described in Task 6.1, a vehicle queuing analysis will be conducted at the project entrance(s) to any proposed parking facility on site other nearby off-street parking locations.

Task 7 – Develop Mitigation/Improvement Measures

Mitigation measures will be proposed to improve operations if significant project-related impacts have been identified, and improvement measures may be proposed where no significant impacts have been identified. In accordance with City guidelines, the report will clearly distinguish between mitigation measures required under CEQA, and transportation improvement measures not related to CEQA significant impacts, such as pedestrian improvement measures, parking access operations, traffic, parking and pedestrian enforcement etc. Responsibility for implementation of identified measures will be identified, where possible.

Task 8 – Alternative Analysis

The No Project Alternative (approved Mission Bay Plan uses on the project site) and a Lesser Intensity Alternative will be assessed qualitatively for various transportation scenarios. Depending on definition of the alternatives and the outcome of the travel demand memo, the Planning Department may require a later time limited quantitative analysis. The scenarios and time periods of analysis will be based on the types and quantities of the land uses included in the alternative (e.g., trip generation for Saturday daily and evening peak hour conditions will not be prepared for an alternative including primarily office uses). The scenarios will be developed in conjunction with development of the alternatives in consultation with the Planning Department and OCII. The analysis will cover all transportation topics. Travel demand estimates will be prepared for each alternative based on the travel demand methodology presented in Task 5.

Task 9 – Transportation Section of the EIR

The transportation consultants will prepare the transportation setting and impact analysis sections for inclusion in the EIR document. The transportation discussion will follow the format specified by Planning Department staff, and will include setting, methodology, impact assessment, and mitigation and improvement measures. A discussion of the underlying environmental review document (e.g., 1998 SEIR) will also be provided, as needed. An Administrative Draft 1 of the transportation chapter will be submitted to the Planning Department for review by Planning, SFMTA and OCII staff.

All stand-alone submittals of the transportation section of the Draft EIR will be in paper copies (five copies), along with an electronic version. Transportation section versions included as part of the overall Administrative Draft EIR will follow the distribution format determined for the EIR.

As part of the transportation section submittal, the transportation consultants will prepare a comprehensive technical appendix that will include, but not be limited to, the following:

- Proposed project access and internal/external circulation plans;
- Lane geometries at the study intersections;
- Traffic summaries showing turning movement volumes at the study intersections for all periods and scenarios listed in Table 1;
- Intersection and freeway ramp LOS analysis for the periods and scenarios listed in Table 1;
- Transit capacity utilization calculations for Muni and regional transit providers for all the periods and scenarios listed in Table 1;
- Travel demand calculations for the proposed project and alternatives to the project;
- Travel demand analysis Technical Memorandum;
- Pedestrian counts and LOS, and bicycle counts at all study locations;
- Existing and Existing plus Project parking supply and utilization; and
- Draft Transportation Management Plan (to be developed by project sponsor).

Two paper copies and an electronic copy of the draft technical appendix will be submitted to the Planning Department for review by Planning, SFMTA and OCII staff for Preliminary Draft 1 and Preliminary Draft 2 submittals.

Task 10 – Prepare Data for Air Quality and Noise Analysis

The transportation consultants will summarize and package the Existing, Existing plus Project, and 2040 Cumulative traffic volumes developed in the previous tasks for submittal to the noise and air quality analysts for their studies.

Task 11 – Attendance at Meetings

The transportation consultants will meet with the Planning Department, OCII, and other city agencies, as appropriate, to work out details related to transportation scope of work, impact assumptions, methodology, and development of improvement and/or mitigation measures.

Task 12 – Draft EIR Response to Comments

The transportation consultant will prepare responses to comments made by public agencies and members of the public at large related to the transportation section of the Draft EIR.

TR-2

TRAVEL DEMAND ANALYSIS

PROPOSED PROJECT TRAVEL DEMAND MEMORANDUM

LCW Consulting

LCW Consulting

Memorandum

To: Brett Bollinger/Chris Kern/Viktoriya Wise/Kansai Uchida – SF Planning Department
 Catherine Reilly – SF Office of Community Investment and Infrastructure

From: José I. Farrán – Advant Consulting; Luba C. Wyznyckj – LCW Consulting

Date: May 22, 2015 Final Memorandum (2nd update)

Re: Travel, Parking, and Loading Demand Estimates for the Proposed Event Center & Mixed-Use Development at Mission Bay Blocks 29-32 – Case No. 2014.1441E

This technical memorandum describes the methodology and assumptions used to determine the travel demand for the proposed event center and mixed-use development at Mission Bay Blocks 29-32, and presents the estimate of project-generated person and vehicle trips that would travel to and from the proposed project. Parking and commercial/service loading demand estimates for the proposed uses are also presented. Detailed travel demand calculation and supporting data are included in the attached Appendix.

INTRODUCTION AND BACKGROUND

GSW Arena LLC (GSW), an affiliate of Golden State Warriors, LLC, which owns and operates the Golden State Warriors National Basketball Association (NBA) team, proposes to develop an approximately 12-acre project located in San Francisco on land referred to as Blocks 29-32 in the Mission Bay South Plan Area. The proposed project consists of a new approximately 18,000-seat multi-purpose event center and ancillary development including multiple office buildings, retail, restaurants, structured parking, plaza areas, and other amenities. The event center would host the Golden State Warriors basketball team during the NBA season, as well as provide a year-round venue for a variety of other uses, including concerts, family shows, other sporting events, cultural events, conferences and conventions. The rectangular site is bound by Third Street to the west, South Street to the north, Terry François Boulevard to the east, and 16th Street to the south, as shown in an aerial map of the project site in Figure 1. It should be noted that as part of the buildout of Mission Bay, Terry François Boulevard will be relocated to align with the eastern edge of Blocks 30 and 32¹.

¹ Relocation of Terry François Boulevard will be implemented as part of the Mission Bay Area South Infrastructure Plan by FOCL-Mission Bay, the entity serving as master developer of the remaining development rights within the Mission Bay South Plan project area.

Figure 1
Proposed Project Site Location
 Source: ESA, Google – 2014

PROPOSED PROJECT LAND USES

The proposed project includes a multi-purpose event center, office,² retail, and restaurant uses (including both quick service and more formal sit-down restaurants) on Blocks 29-32.³ The event center building would include a variety of supporting uses, including office space, practice facilities, event hall, and other event-related uses. Table 1 provides a summary overview of the key characteristics of the project development.

**Table 1
Summary of Proposed Project for Travel Demand Analysis^[a]**

Project Component	Characteristics	
	Gross Square Feet (GSF) / Attendance for Travel Demand Analysis	Event Center Employment Characteristics
Event Center	750,000 GSF	
- No Event		105 employees
- GS Warriors Game	18,064 attendees (maximum)	1,000 employees
- Convention	9,000 attendees (average)	675 employees
GSW Office (Administration & Mgmt.)	25,000 GSF	[c]
Office	580,000 GSF	[c]
Retail ^[b]	62,500 GSF	[c]
Quick Service Restaurant	11,000 GSF	[c]
Sit-down Restaurant	51,500 GSF	[c]

Notes:

- [a] This table presents the characteristics of the proposed project uses as they are defined for travel demand analysis purposes.
- [b] The Retail use encompasses general and specialty retail, as well as food-related retail.
- [c] Employment information is not required for travel demand analysis purposes; travel demand for these uses is calculated based on the amount of square footage provided, in accordance with the *SF Guidelines*.

Source: Golden State Warriors and Strada Investment Group – November 2014

² The Mission Bay South Redevelopment Plan allows for general office as well as research and development uses at the project site. According to the 1998 Mission Bay SEIR, the daily travel demand per 1000 gsf for an office use is approximately 2.3 times the daily demand for R&D (Table V.E.6, p. V.E.58), thus the travel demand analysis conservatively assumes office use at the site.

³ Quick service restaurants consist of full-service eating establishments with typical duration of stay of approximately one hour, while more formal sit-down restaurants have a typical duration of stay of at least one hour and generally do not serve breakfast (Source: *Trip Generation Manual – 9th Edition*, Institute of Transportation Engineers, Washington DC, 2012).

EVENT CENTER ATTENDANCE

An event center is a special trip generator for which travel demand characteristics (i.e., trip generation rates, peak hour factors, etc.) are not available from standard sources used for development projects in San Francisco, such as the *Transportation Impact Analysis Guidelines for Environmental Review (SF Guidelines)*⁴ or the Institute of Transportation Engineers' *Trip Generation Manual*.⁵ As such, the transportation planning characteristics of the proposed event center were evaluated taking into account the expected attendance for various events at the proposed event center.

Average and maximum attendance estimates by type of event for the proposed event center were prepared by the project sponsor and are summarized in Table 2; Appendix A (pp. A-7 through A-11) provides additional information about the survey data.⁶ The expected attendance would vary depending on the type of event held (e.g., basketball game, concert, non-sports event), but will be expected to be similar on weekdays and on weekends (both weekday and weekend scenarios are included in this analysis). In the case of sporting events, the expected attendance would also depend on the interest in competing teams, and, in the case of concerts, on the popularity of the performing artists.

Average visitor attendance for the proposed event center is projected to range between 5,000 attendees for a family show event, to between 17,000 and 18,000 attendees for a regular season or post season basketball home game; concert average attendance is estimated to range between 3,000 attendees for arena theater concerts to 12,500 attendees for the typical end-stage full arena configuration, and average convention attendance is estimated at 9,000 attendees.⁷ As shown in Table 2, there would be up to 225 event days in any given year. Table 2 also provides a summary of event center employment according to the type of event.

Transportation planning analyses of special generators such as event centers typically use the 85th percentile, and sometimes the 90th percentile, of the daily attendance throughout a period of one or more years, to define the attendance for the analysis.

⁴ *Transportation Impact Analysis Guidelines for Environmental Review*, San Francisco Planning Department, October 2002.

⁵ *Trip Generation Manual – 9th Edition*, Institute of Transportation Engineers, 2012.

⁶ Event types and characteristics provided by the project sponsor were based on the current event mix at the Oracle Arena in Oakland and SAP Center in San Jose, as well as information from the Barclays Center in Brooklyn, New York. The project sponsor considers the Barclays Center to be a relevant comparable, as it is the most recently completed entertainment venue hosting an NBA team, is a single-tenant arena, and is in an urban setting. Attendance estimates for conferences, corporate events, and other rentals were validated through discussion with San Francisco Travel.

⁷ Event Center and Mixed-Use Development at Mission Bay Blocks 29-32, Initial Study, November 19, 2014.

**Table 2
Event Characteristics at Proposed Event Center**

Event Type	Annual Number of Event Days at the Event Center	Event Attendance ^(a) Average Maximum	Event Center Day-of-Game/Event Employment Characteristics ^(a)	Season	Event Temporal Characteristics
Golden State Warriors Basketball Home Games	2 to 3 preseason home games	11,000 18,064	1,000 ^(b)	two weeks mid-October	Regular season game time: 7:30 to ~9:40 p.m. ^(b) Pre-season/Pre-season game time variable.
	41 regular season home games	17,000 18,064	1,000 ^(b)	late October to mid-April	Monthly Distribution: ~7 home games per month Weekly Distribution: 50%/50% weekdays/weekends
	0 to 16 post season home games	18,000 18,064	1,000 ^(b)	mid-April to mid-June	Monday-Thursday: 2 to 6 home games/month Friday: 1 to 3 home games/month Saturday: 1 to 3 home games/month Sunday: 0 to 1 home games/month
Concerts	Approximately 30 Full Arena Concerts	12,500 14,000 to 18,500 ^(a)	775 ^(c)	major concert season is Fall, Winter and early Spring.	Concert time: typically 7:30 p.m. to 10:30 p.m. Weekly distribution: primarily Friday and Saturday evenings
	Approximately 15 Arena Theater Concerts	3,000 4,000	675 ^(c)	Summer is the slow season	
Family Shows ^(f)	Approximately 55	5,000 8,200	675 ^(c)	distributed throughout the year	Family Show characteristics: typically 10 shows over 5 days (Wednesday to Sunday): Wednesday: 1 show, 7:30 p.m. to 9:00 p.m. Thursday: 1 show, 7:30 p.m. to 9:00 p.m. Friday: 2 shows, 10:30 a.m. to 12:00 p.m.; and 7:30 p.m. to 9:00 p.m. Saturday: 3 shows, 11:00 a.m. to 12:30 p.m.; 3:00 p.m. to 4:30 p.m.; and 7:00 p.m. to 8:30 p.m. Sunday: 3 shows, 11:00 a.m. to 12:30 p.m.; 3:00 p.m. to 4:30 p.m.; and 7:00 p.m. to 8:30 p.m.
Other Sporting Events ^(d)	Approximately 30	7,000 18,064	675 ^(c)	distributed throughout the year	distributed throughout the year; times variable
Conventions/ Corporate Events ^(e)	Approximately 31	9,000 18,500 ^(h)	675 ^(c)	distributed throughout the year	distributed throughout the year; times variable

FINAL MEMORANDUM (2nd update)
Case No. 2014.1441E

May 22, 2015
Page 5

LCW Consulting

Notes:

- [a] The event center attendance and employment estimates used for travel demand calculations and analysis are shown in bold and italics.
- [b] This estimate includes approximately 900 event center day-of-game non-GS Warriors employees, and approximately 100 GS Warriors employees that would work at the Warriors games. The estimate does not include GS Warriors employees that would occupy the team management offices in the event center during the day and non-GS Warriors employees of the retail and office buildings at Mission Bay Blocks 29-32; all of these employees are accounted for under the GS Warriors administration and management office space, general office, retail, and restaurant land use categories shown in Table 1 (p. 3) of this technical memorandum. This estimate does not include the visiting team/event performers and their support staff at the event center during a game, but they are considered “de minimis” for travel demand analysis purposes.
- [c] These event employee estimates refer to non-GS Warriors employees. These estimates do not include the 105 Event Center GSW employees, including electricians or facilities staff, who would also be present on No Event days.
- [d] The large majority of GS Warriors regular season home games would start at 7:30 p.m. For example, over the course of the most recent full three NBA regular seasons (2010-11, 2012-13, and 2013-14; the 2011-12 NBA season was shortened due to delays in signing of a collective bargaining agreement between NBA owners and players and consequently is not included), 90 percent of GS Warriors home games started at 7:30 p.m., 6 percent of homes games started at 6:00 p.m., and the balance (accounting for one home game or less per season) started at either 1:00 p.m. (on Martin Luther King holiday), 5:00 p.m., or 7:00 p.m.
- [e] Nearly 90 percent of annual arena concerts at the event center would be with maximum end-stage concert configuration attendance of 14,000, and 10 percent (no more than four arena concerts annually) would be with a 360-degree configuration which would allow for a maximum attendance of about 18,500.
- [f] Examples of family shows include Disney on Ice, Disney Live, Harlem Globetrotters, and Sesame Street Live.
- [g] Examples of non-GS Warriors Sporting Events include college basketball, hockey, boxing, figure skating, arena football, gymnastics, lacrosse, tennis, and mixed martial arts. These could be professional, collegiate, amateur, high school/youth, local, regional, or international competition.
- [h] Examples of Conventions/Corporate Events include conventions, conferences, cultural events, and corporate events. It is anticipated that the event center would only act as a satellite venue for conventions/conferences held primarily at the Moscone Center when an event or speaker cannot be accommodated at that location.
- [i] The maximum attendance of 18,500 represents the maximum number of conference attendees that could be accommodated at the event center in a configuration similar to a center stage concert (see footnote [a] above). However, the event center is expected to typically serve as a satellite venue for conventions/conferences held primarily at the Moscone Center, with an attendance of 9,000 people.

Sources: Golden State Warriors, Strada Investment Group based on current event mix at the Oracle Arena in Oakland and the SAP Center in San Jose, as well as information provided for the recently completed Barclays Center in Brooklyn, New York – 2014

For the analysis of the proposed event center, the use of the maximum attendance presented in [Table 2](#) for basketball games was analyzed, as it the most conservative approach that assumes that the event center would be filled to capacity (i.e., 18,064 attendees).⁸

In addition to a sell-out basketball game event, the transportation analysis also includes a convention/corporate event at the event center. For convention/corporate events, a 9,000-attendee event was analyzed, as this attendance level represents the average attendance (i.e., the average attendance for events would be 9,000) for about 50 percent of the events that would occur at the proposed event center (i.e., the convention events, family shows, and other sporting events).⁹

The travel demand for concerts, family shows and other sporting events was not estimated quantitatively because as shown in [Table 2](#) these types of events are expected to attract a lower attendance and require fewer employees than a basketball game. In addition, arrival and departure travel patterns for these types of events would also be expected to be similar to those of basketball game. As such, the transportation infrastructure (roadways, transit vehicles, stations, sidewalks, etc.) would be expected to operate similar to or better before and after concerts than before or after a sold-out basketball game.

TRAVEL DEMAND

Travel demand refers to the new vehicle, transit, pedestrian and bicycle trips generated by the proposed project. The methods commonly used for forecasting travel demand for development projects in San Francisco are based on person-trip generation rates, trip distribution information, and mode splits data described in the *SF Guidelines*, and which are based on a number of detailed travel behavior surveys conducted within San Francisco. The data in the *SF Guidelines* are generally accepted as more appropriate for use in transportation impact analyses for San Francisco development projects than conventional transportation planning data because of the unique mix of uses, density, availability of transit, and cost of parking in San Francisco.

However, as noted above, the *SF Guidelines* do not include travel demand estimates for the specialized uses (e.g., sports events, conventions, and other events) that would take place at the proposed event center. Similarly, standard trip generation resources, such as the *Trip Generation Manual – 9th Edition*, 2012, Institute of Transportation Engineers (ITE), do not include sufficiently detailed trip generation data for such specialized uses. Therefore, the travel demand for the event center component of the proposed project was based on the estimated attendance described in the previous section.¹⁰

⁸ 2013-14 was the ninth GS Warriors season averaging more than 18,000 attendees per game with a sellout season-ending average attendance (GS Warriors press release, April 14, 2014); the maximum capacity for a basketball game at the Oracle Arena is approximately 19,600 seats (Event Center and Mixed-Use Development at Mission Bay Blocks 29-32, Initial Study, November 19, 2014).

⁹ The event center is expected to typically serve as a satellite venue for conventions/conferences held primarily at the Moscone Center, with an attendance of 9,000 people. The maximum attendance of 18,500 shown in [Table 2](#) represents the maximum number of conference attendees that could be accommodated in a 360-degree center stage configuration, which would be infrequent.

¹⁰ Survey and other relevant data supplied by the project sponsor are included in [Appendix A \(pp. A-7 to A-11\)](#).

In addition, the trips generation rates presented in the *SF Guidelines* and ITE's *Trip Generation Manual* cannot be directly applied to some development projects, such as the proposed project, because of its large scale, unique location and mixed-use character (restaurant and retail uses supporting an event center as an anchor use). Thus, appropriate adjustments have been made to account for these factors, as described later in this memorandum.

The weekday daily PM peak hour travel demand for standard project land uses, such as office, retail, and restaurant uses were developed in accordance with the *SF Guidelines*, which provides PM peak hour trip generation rates and modal split, trip distribution and average vehicle occupancy data specific to the southeast quadrant of San Francisco (Superdistrict 3) where the project site is located. The modal split and trip distribution assumptions presented in the *SF Guidelines* for work trips into and out of Superdistrict 3 were further refined using more recent travel pattern data of actual Mission Bay employees collected by the Mission Bay Transportation Management Association (MB TMA) in 2012, 2013 and 2014.

Travel demand was also determined, as described in the following section, for weekday evening and late evening and for Saturday daily and evening conditions based on adjusted trip generation rates developed for the office, retail, and restaurant uses using information obtained from ITE's *Trip Generation Manual*, the Urban Land Institute's *Shared Parking* (2nd Edition), and Pushkarev and Zupan's, *Urban Space for Pedestrians*. [Appendix A \(pp. A-14 through A-16, and A-23 through A-62\)](#) contains the travel demand calculations and assumptions. For the office, retail, and restaurant uses, a weekday-to-Saturday ratio was obtained from the trip generation rates presented in ITE's *Trip Generation Manual* for the proposed project uses, which was then applied to the weekday daily trip generation rates presented in the *SF Guidelines* in order to obtain the weekend daily rates. For the office, retail, and restaurant uses, data from the Pushkarev and Zupan and ULI studies was used to estimate the percentage of daily trips that would occur during the weekday evening, weekday late evening and Saturday evening peak hours.

PROJECT SCENARIOS AND TIME PERIODS OF ANALYSIS

Travel demand for the proposed event center and mixed-use development on Blocks 29-32 presented in this document evaluates three different event scenarios:

- No event at the event center;
- Basketball game at the event center; and,¹¹
- Convention event at the event center.

¹¹ The game day analysis for weekday PM (4 to 6 PM), evening (6 to 8 PM), late evening (9 to 11 PM), and Saturday evening (7 to 9 PM) will also include the evaluation of transportation conditions when a SF Giants home game occurs concurrently with a basketball game, although because there is a lack of overlap of the basketball and baseball seasons such that concurrent events would be uncommon, limited primarily to post-season play situations.

The expected start and end times of these project events and other characteristics are presented in [Table 2 \(p. 5\)](#). The travel demand for the three scenarios has been estimated for the following six time periods:

- Weekday all day;
- Weekday PM peak period (highest 60-minute period between 4 and 6 PM);
- Weekday evening peak period (highest 60-minute period between 6 and 8 PM);
- Weekday late evening period (highest 60-minute period between 9 and 11 PM);
- Saturday all day; and
- Saturday evening period (highest 60-minute period between 7 and 9 PM).

Each event scenario was evaluated for the particular time periods during which the specific event would occur. For example, convention events are not anticipated to occur in the weekday evening and late evening peak hours or on weekends, and therefore, analysis of convention events during these time periods was not conducted.

- The weekday PM peak period (from 4 to 6 PM) was selected because it represents the period during which weekday background traffic in the area is highest. Approximately 5 percent of attendees are projected to arrive at the event center between 5 and 6 PM.
- The weekday evening peak period (from 6 to 8 PM) was selected because basketball games typically start at 7:30 PM and therefore, a higher percentage of inbound event attendees would travel to the event center during the 6 to 8 PM period than during the 4 to 6 PM commute peak period; see [Table 3](#). Approximately 65 percent of attendees are projected to arrive at the event center during the 7 to 8 PM peak hour.
- The weekday late evening period (from 9 to 11 PM) was selected because it represents the period during which the highest outbound event trips would occur after a basketball game or concert event. Approximately 70 percent of attendees are projected to depart the event center during the 9 to 10 PM peak hour.
- The Saturday evening period (from 7 to 9 PM) was selected because it represents the period during which the highest inbound event trips would occur. Approximately 65 percent of attendees are projected to arrive at the event center during the 7 to 8 PM peak hour.

Table 3
Estimated Basketball Game Attendee Arrival and Departure Patterns ^[a]
For 7:30 PM Start Time and 9:40 PM End Time

Time Period	by Hour	Cumulative
Arrivals		
5:00 to 5:30 PM	1.0%	1.0%
5:30 to 6:00 PM	4.0%	5.0%
6:00 to 6:30 PM	10.5%	15.5%
6:30 to 7:00 PM	19.5%	35%
7:00 to 7:30 PM	32.5%	67.5%
7:30 to 8:00 PM	32.5%	100%
Departures		
9:00 to 9:30 PM	30%	30%
9:30 to 10:00 PM	40%	70%
10:00 to 10:30 PM	30%	100%

Note:

[a] Based on basketball game arrival and departure information provided by the Golden State Warriors for Oracle Arena, as well as recent arrival/departure data for other NBA facilities to account for the increased availability of retail and restaurant uses at the proposed project site compared to Oracle Arena in Oakland. Arrival patterns were adjusted to account for availability of retail/restaurant uses at the proposed project site. A summary of this data is provided in [Appendix A](#).

Source: Golden State Warriors, Advant Consulting – January 2015

The “No Event” conditions reflect travel demand associated with the office uses at the event center, plus the travel demand associated with the office, retail, and restaurant (both quick service and sit-down) uses for the weekday PM commute peak hour of analysis and the Saturday evening peak hour. [Table 4](#) provides a cross-tabulation of proposed scenarios and time periods for which the project travel demand was estimated.

**Table 4
Proposed Project Scenarios and Time Periods
for Travel Demand Estimation**

Project Scenario	Time Period [a]					
	Weekday				Saturday	
	Daily	PM Peak Hour (4 to 6 PM)	Evening Peak Hour (6 to 8 PM)	Late Evening Peak Hour (9 to 11 PM)	Daily	Evening Peak Hour (7 to 9 PM)
No Event	√	√			√	√
Basketball Game	√	√ [b]	√ [b]	√ [b]	√	√ [b]
Convention Event	√	√				

Notes:

- [a] The time periods presented in this table are those for which the project travel demand is being estimated because that is the time period during which trip volumes would be highest; they do not represent the only time periods during which an event could take place at the proposed event center.
- [b] The basketball game day analysis also includes the evaluation of peak hour transportation conditions when a SF Giants home game occurs concurrently with a basketball game.

Source: Advant Consulting/LCW Consulting – August 2014

Overall, the travel demand was calculated for seven combinations of project scenarios and peak hour time periods, five peak hour scenarios on a weekday and two peak hour scenarios on a Saturday. In addition, the transportation impact analysis of basketball game conditions was performed for three peak hour scenarios (weekday PM, weekday evening, and Saturday evening) that also includes the evaluation of transportation conditions with the travel demand generated by a concurrent SF Giants baseball game at AT&T Park, however, this does not affect the calculation of the proposed project travel demand estimates presented in this document.

TRIP GENERATION

The person-trip generation for the proposed project includes trips made by event attendees, employees, and other visitors to the project site and are based on the appropriate rates as described in a previous section and summarized in Table 5. Detailed calculations for the development of these rates are provided in Appendix A (pp. A-5 through A-22). The rates shown in Table 5 were then applied, as appropriate, to the number of expected event attendees, 1,000 GSF of office, retail and restaurant uses in order to obtain the number of person trips generated by each land use.

**Table 5
Proposed Project Person Trip Generation Rates by Land Use and Time Period [a]**

Land Use Type	Daily Rate	Weekday			Saturday						
		P1M Peak Hour of the 4 to 6 PM period [b] % of Daily	Evening Peak Hour of the 6 to 8 PM period [b] % of Daily	Late Evening Peak Hour of the 9 to 11 PM period [c] % of Daily	Daily % of Weekday	Evening Peak Hour of the 7 to 9 PM period [b] % of Daily	Rate				
Event Center (per attendee)	2.1	4.8%	0.10	30.9%	0.65	33.8%	0.71	100%	2.1	30.9%	0.65

Notes:

- [a] See Appendix B (pp. A-23 through A-62) for detailed trip generation rate calculations.
- [b] Pre-event analysis period.
- [c] Post-event analysis period.
- [d] The average person trip rate per attendee depends in part on the number of employees working at the event; a convention event has the lowest attendee-to-employee ratio (13) compared to a basketball game (18); in addition, it is assumed that 25 percent of the employees and 50 percent of the attendees during a convention would leave the project site during the day for lunch, shopping, errands, etc., resulting in a higher average daily person trip rate than a basketball game.
- [e] Not applicable; not part of the travel demand analysis because other scenarios would capture the potential transportation impacts during this period.
- [f] The project sponsor anticipates that the quick service restaurants would be open similar hours for event and no-event days alike.

Source: SF Guidelines, Institute of Transportation Engineers, Urban Land Institute, Pushkarev and Zupan, Advant Consulting – January 2015.

It should be noted that the rates presented in [Table 5](#) represent the number of person trips that would be generated by each project component as a standalone use. Some of the visitor trips entering/exiting the project retail and restaurant uses would be made by individuals destined to either nearby uses or to other components of the proposed project (referred to as visitor linked trips), such as the event center or the nearby residential, research and development, office or UCSF uses.

Thus, to account for the linked visitor trips, based on studies of non-work (visitor) trips conducted along the San Francisco waterfront and the type of retail and restaurant uses accessory to the event center,¹² a daily 67 percent linked trips reduction was applied to non-work (visitor) trips for retail and restaurant uses during an event day (i.e., 33 percent of the visitor trips are considered new trips to the area unrelated to other nearby uses). On the other hand, because it is likely that more people would come to the area to specifically visit the project retail and restaurant uses on a no event day, the daily linked trip factor was reduced to 33 percent for the sit-down restaurant and retail uses when no events are planned to take place at the site (i.e., 67 percent of the visitor trips are new trips to the site and to the area on non-event days). These assumptions are consistent with and more conservative (i.e., generates more trips) than the data obtained from a survey of shoppers conducted in the vicinity of the San Francisco Center at Powell and Market streets,¹³ which found a linked trip factor of 67 percent for retail uses.

Higher visitor linked trip ratios were assumed for the evening and late evening periods during an event, as shown in [Table 6](#), when the percent of visitors unrelated to nearby project uses would be expected to be lower. It was assumed that the visitor linked trip factor would generally be constant throughout the day during no event days. For event days, on the other hand, it was assumed that the linked trip factor would progressively increase as the event start time approaches, changing from the average daily value of 67 percent before 6 PM, to 95 percent immediately before, during and after the event. No linked trip factors were assumed under any scenario for visitors to the office and movie uses.

¹² San Francisco Boudin Bakery and Café at Fisherman’s Wharf Transportation Study, prepared by Wilbur Smith Associates for the San Francisco Planning Department, Case Number 2003.0186, September 19, 2003.

¹³ City Place Cross Shopping Survey Results, Technical memorandum prepared by AECOM for the SF Planning Department, October 18, 2007 (a copy of this document is included in [Appendix E](#), p. A-75.).

Table 6
Proposed Linked Visitor Trip Reduction Factors ^[a]
by Type of Land Use

Land Use ^[b]	Time Period					
	Daily		Before 6 PM		After 6 PM	
	Event	No Event	Event	No Event	Event	No Event
Retail	67%	33%	67%	33%	95%	33%
Quick Service Restaurant	67%	67%	67%	67%	95%	67%
Sit-down Restaurant	67%	33%	67%	33%	95%	33%

Notes:

[a] As an example, a 67 percent linked trip reduction factor means that 33 percent of the visitor trips are considered new trips to the area unrelated to other project or nearby uses. No linked trip reduction factors were applied to employee work trips for any of the proposed land uses as the trip credit is already being taken on the non-work (visitor/customer) end of the retail or restaurant trip.

[b] No linked trip factors were assumed under any scenario for visitors/customers to the office uses.

Source: Advant Consulting – November 2014

[Table 7 on the next page](#) presents the resulting number of person trips generated by the proposed project uses for the weekday and Saturday daily and peak hour analysis periods, once the trip rates presented in [Table 5](#) and the linked trip factors shown in [Table 6](#) were applied to the proposed project land uses and event attendances presented in [Tables 1 and 2](#), respectively; the calculations and adjustments for each individual land use are shown in [Appendix B \(pp. A-50 through A-62\)](#).

No Event

As shown in [Table 7](#), the overall daily person trip generation would be lower on a Saturday than on a weekday, due to the higher trip generation associated with the office use on a weekday.

- On a weekday without an event, the proposed project would generate 26,998 daily person trips (inbound plus outbound), and 2,796 person trips during the weekday PM peak hour.
- On a Saturday without an event the proposed project would generate 21,883 daily person trips and 3,130 person trips during the Saturday evening peak hour.

Table 7
Proposed Project Person Trip Generation by Land Use and Time Period ^[a]

Land Use Type	Weekday				Saturday	
	Daily	PM Peak Hour of the 4 to 6 PM period	Evening Peak Hour of the 6 to 8 PM period	Late Evening Peak Hour of the 9 to 11 PM period	Daily	Evening Peak Hour of the 7 to 9 PM period

Notes:

- [a] Numbers may not sum to total due to rounding to the nearest person-trip. See Appendix B (pp. A-50 through A-62) for detailed trip generation calculations for each individual land use.
- [b] 105 employees would work at the event center on no-event days.
- [c] Not applicable; not part of the travel demand analysis.
- [d] Includes linked trip reductions as appropriate.

Source: Advant Consulting – January 2015.

With Event

The total number of daily person trips generated on a weekday event day with a basketball game would be 58,538 trips. Of these, 3,859 person trips would be during the PM peak hour, 12,285 person trips during the evening peak hour, and 13,218 person trips during the weekday late evening peak hour. The total number of daily person trips generated on a Saturday with a basketball game would be 52,098 for a basketball game, of which 12,252 person trips would occur during the evening peak hour.

Convention events would generate fewer daily person trips than a basketball game (38,128 person trips for a basketball game versus 28,688 person trips for a convention event), however, the proportion of convention event trips during the weekday PM peak hour would be greater than during a basketball game. This is because it is anticipated that many people would leave the convention during the weekday PM peak hour while the majority of basketball fans arrive after the end of the PM peak hour (6 PM). The total number of daily person trips generated on a weekday event day with a convention event would be 49,097 trips, of which 5,169 person trips would occur during the PM peak hour.

TRIP DISTRIBUTION

The directional distribution is based on the origins and destinations of trips for each specific land use, which are then assigned to the four quadrants of San Francisco (Superdistricts 1 through 4), East Bay, North Bay, South Bay and Out of Region (a map of the San Francisco Superdistricts is included in Appendix A, p. A-21).

The directional distribution of visitor trips for the proposed office, restaurant, and retail uses was obtained from the *SF Guidelines* for Superdistrict 3¹⁴ (SD3), in which the project is located. The distribution of convention/corporate events attendees was based on data provided by the Moscone Center Operator and documented in the Moscone Center Expansion EIR.¹⁵ The distribution of basketball game attendees was derived from information provided by Golden State Warriors (based on a market study assessment conducted by the project sponsor for the previously-proposed project location at Piers 30-32 in San Francisco; see Appendix A, p. A-7) for basketball events.

The directional distribution of employee trips for all proposed project uses was obtained from information provided by the Mission Bay TMA derived from transportation surveys of residents and employees in Mission Bay conducted in 2012, 2013, and 2014.¹⁶ The trip distribution percentages are summarized in Table 8.

¹⁴ Superdistricts are travel analysis zones established by the Metropolitan Transportation Commission (MTC). These Superdistricts provide geographic subareas for planning purposes in San Francisco; a map with the Superdistrict boundaries is included in Appendix A (p. A-25).

¹⁵ *Moscone Center Expansion Project – Estimation of Travel Demand*, Advant Consulting, January 9, 2014. Appendix C of Moscone Center Expansion Project EIR, April 2014. A copy of this document is available for review at the SF Planning Department, 1650 Mission Street, Suite 400, as part of Case File No. 2013.0154E.

¹⁶ Annual surveys conducted by the MB TMA in 2012, 2013, and 2014. Online surveys were sent in September-October to residential and commercial property managers in the Mission Bay area for distribution to their tenants or employees; the online survey remained open for 10 to 15 days. Typical rates of response were 4 to 8 percent based on the total employment and residential population at Mission Bay (Wendy Silvani, consultant for Mission Bay TMA, October 14, 2014). More than 1,000 survey responses were used in the travel demand analysis, which are summarized in Appendix A, page 17.

**Table 8
Proposed Project Trip Distribution Patterns by Land Use [a]**

Place of Trip Origin/Destination	Basketball Event		Convention Event		Retail		Office/Restaurant	
	Workers [b]	Visitors [c] Weekday Inbound	Workers [b]	Visitors [c] All Other [a]	Workers [b]	Visitors [c]	Workers [b]	Visitors [c]
San Francisco	7.7%	14.8%	7.7%	11.1%	7.7%	6.0%	7.7%	13.0%
Superdistrict 1	9.9%	4.6%	9.9%	3.4%	9.9%	9.0%	9.9%	14.0%
Superdistrict 2	22.3%	5.5%	22.3%	4.2%	22.3%	61.0%	22.3%	44.0%

Superdistrict 4	27.7%	31.1%	27.7%	33.0%	27.7%	3.0%	27.7%	9.0%
East Bay	3.5%	8.9%	3.5%	13.0%	3.5%	2.0%	3.5%	1.0%
North Bay	19.0%	26.7%	19.0%	28.0%	19.0%	9.0%	19.0%	9.0%
South Bay	2.5%	4.0%	2.5%	4.0%	2.5%	5.0%	2.5%	3.0%
Out of Region	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%
Total	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%

Notes:

- [a] Percentages may not sum to 100 due to rounding.
 - [b] Based on Mission Bay TMA Transportation surveys of residents and employees in Mission Bay conducted in 2012, 2013, and 2014 (see Appendix A, p. 17).
 - [c] Adjusted for trips starting at the place of employment rather than at home for a weekday evening event based on Golden State Warriors survey data (see Appendix A, p. A-7).
 - [d] All Other includes the distribution pattern for weekday outbound trips, and Saturday inbound and outbound trips, and reflects trips starting and ending at the place of residence, rather than the place of employment (see footnote C regarding distribution of weekday inbound trips). Based on Golden State Warriors survey data for a San Francisco arena (see Appendix A, p. A-9).
 - [e] Based on Moscone Center Expansion Project EIR data.
 - [f] SF Guidelines, Appendix E - Table E-14 Visitor Trips to SD3 (Retail).
 - [g] SF Guidelines, Appendix E - Table E-15 Visitor Trips to SD3 (All Other).
- Sources: SF Guidelines, GS Warriors, MB TMA, Moscone Center, Adavant Consulting – November 2014.

For worker trips to all land uses, the majority would be to/from San Francisco (47.3 percent), with the greatest proportion within SD3 (22.3 percent), followed by East Bay (27.7 percent), and then South Bay (19.0 percent) origins/destinations. For visitor trips to a basketball game, the majority of trips would be to/from East Bay origins/destinations (31.1 to 33.0 percent), followed by the South Bay (26.7 to 28.0 percent), and then San Francisco (22.0 to 29.3 percent) origins/destinations.

The origin/destination distribution range for a weekday basketball game reflects an adjustment for event attendees who would travel to the event center directly from work rather than from their place of residence. The adjustment was based on a survey of Golden State Warriors season ticket holders, which is provided in Appendix A (p. A-7). As shown in Table 8 and in the appendix, the number of trips starting in San Francisco on a weekday would increase by approximately 7.5 percentage points, with the corresponding reductions in trips arriving from the East Bay (2 percentage points), North Bay (4 percentage points), and South Bay (1.5 percentage points) areas.

The majority of visitor trips to a convention event, retail, office, and restaurant uses would be from within San Francisco (70 to 81 percent), followed by South Bay (9 to 10 percent), and then East Bay (3 to 9 percent) origins/destinations.

MODE OF TRAVEL

The estimated daily, PM peak hour, evening peak hour, and late evening peak hour person trips were allocated to travel modes in order to determine the number of auto, transit, taxi, TNC vehicles, motor coaches, bicycle, walk, and other trips. For event center basketball games, the “other” category includes motorcycles and non-conventional travel modes such as pedicabs, while for the no-event related uses of the proposed project (office, retail, and restaurant) “other” includes bicycles, motorcycles, and taxis. The bicycle trips generated by a basketball game were calculated as a separate mode of travel (see Appendix A, pp. A-35 through A-46), but have been aggregated with those under the “other” category in the summary tables presented in this technical memorandum.

Travel mode splits of visitor trips for the non-event related uses were estimated from information in the SF Guidelines to the southeastern waterfront (SD3), where the project site is located. Travel mode splits of all employee trips (including event employees at basketball games and conventions) were estimated from information provided by the Mission Bay TMA based on transportation surveys conducted in 2012, 2013, and 2014.

Mode split assumptions for convention/corporate events attendees were based on data provided by the Moscone Center Operator and documented in the Moscone Center Expansion EIR,¹⁷ with some adjustments to account for the SD3 location of the proposed project. Specifically, it was assumed that the overall auto usage would be twice the Moscone Center (20

¹⁷ Moscone Center Expansion Project – Estimation of Travel Demand, Adavant Consulting, January 9, 2014. Appendix C of Moscone Center Expansion Project EIR, April 2014. A copy of this document is available for review at the San Francisco Planning Department, 1650 Mission Street, Suite 400, as part of Case File No. 2013.0154E. A summary table is included in Appendix A (p. A-19).

No Event

On a weekday with no event, the proposed project would generate 1,344 person trips by automobile (48 percent), 881 person trips by transit (32 percent), and 570 person trips by other modes (20 percent) during the PM peak hour. On a Saturday with no event, the proposed project would generate 1,707 person trips by automobile (55 percent), 673 person trips by transit (22 percent), and 750 person trips by other modes (24 percent) during the evening peak hour.

With Event

The person trips by mode generated by the proposed project on a weekday with a basketball game would be as follows:

- The overall project would generate 1,645 person trips by automobile (43 percent), 1,625 person trips by transit (42 percent), and 590 person trips by other modes (15 percent) during the weekday PM peak hour.
- The overall project would generate 6,546 person trips by automobile (53 percent), 4,371 person trips by transit (36 percent), and 1,368 person trips by other modes (11 percent) during the weekday evening peak hour.
- The overall project would generate 7,280 person trips by automobile (55 percent), 4,680 person trips by transit (35 percent), and 1,258 person trips by other modes (10 percent) during the weekday late evening peak hour.

On a Saturday with a basketball game, the proposed project would generate 7,261 person trips by automobile (59 percent), 4,310 person trips by transit (35 percent), and 681 person trips by other modes (6 percent). On a Saturday event day during the evening peak hour, the project would generate a higher percentage of auto trips than on a weekday event day (59 percent on a Saturday, as compared to 43 percent on a weekday), as a result of the typically lower transit service available, combined with a greater number of attendees arriving from outside San Francisco.

On a weekday with a convention event, during the PM peak hour the proposed project would generate a relatively low percentage of weekday auto trips (30 percent for a convention event compared to 41 percent for a basketball game), since about 80 percent of the convention trips would be expected to arrive by transit, taxi or convention shuttle bus service. Approximately 2 percent of the convention attendees are expected to walk to the site.

VEHICLE OCCUPANCIES AND VEHICLE TRIPS BY PLACE OF ORIGIN

To determine the number of vehicle trips generated by the proposed project under various scenarios, an average vehicle occupancy rate was applied to the number of person trips by automobile mode. Average vehicle occupancies for a convention event as well as for standard project land uses, such as office, retail, and restaurant uses were estimated in accordance with the methodologies in the *SF Guidelines*.

Average Vehicle Occupancy: Vehicle occupancy data for the basketball games at the event center was developed based on information from surveys conducted by the SF Giants in 2007; data from 2007 was used because the 2012 SF Giants survey used to derive the modal split ratios did not include information about vehicle occupancy. More detailed information from the 2007 SF Giants survey is included in [Appendix A \(p. A-12\)](#). The average vehicle occupancy for attendees for a weekday and Saturday evening event derived from the SF Giants survey (2.7 passengers per vehicle) is comparable to data obtained from other similar transportation planning studies for arenas in urban settings, which estimated average vehicle occupancies between 2.35 and 2.8 passengers per vehicle, with the higher values being observed on weekends.¹⁸

[Table 10](#) summarizes the average vehicle occupancy rates and number of vehicles for project trips by place of origin/destination and time period. When combined with employee trips and trips to/from other on-site uses the overall average vehicle occupancy during a convention event and a basketball would range between 1.5 and 3.6 passengers per vehicle, depending on the type, day of the event, and peak hour.

During the weekday PM peak hour without and with a basketball game, the average vehicle occupancy would be about 1.9 passengers per vehicle, which generally reflects the overall peak period commute average vehicle occupancies of the other project land uses (i.e., the proportion of basketball game attendees who travel to the event center during the PM peak hour would be low – about 5 percent of arrivals, as presented in [Table 3](#)). During the weekday evening and late evening peak hours, the average vehicle occupancy would increase to 2.5 and 2.6 persons per vehicle, as the majority of trips would be event-related. During the Saturday evening peak hour for no event conditions, the average vehicle occupancy would be higher than on weekdays, at 2.2 persons per vehicle, reflecting the generally higher average vehicle occupancy for entertainment uses (i.e., the sit-down restaurant), while with a basketball game the average vehicle occupancy would increase to 2.6 persons per vehicle reflecting the greater number of attendees that would travel to the event center by auto mode on a Saturday as compared to a weekday game.

The average vehicle occupancy during a convention event during the weekday PM peak hour (3.3 persons per vehicle overall, 8.1 persons per vehicle for SD1) includes trips by convention shuttle bus with an average occupancy of 25 passengers per vehicle.

¹⁸ Table 2, p. 5; *Transportation Planning Assumptions for the Atlantic Yards Arena and Redevelopment*, Technical Memorandum, Philip Habib and Associates, May 4, 2006, and Table 10, p. 6, *Madison Square Garden Relocation and Expansion Transportation Planning Assumptions*, Technical Memorandum from PB Team to New York City Department of City Planning, November 11, 2003; copies of these two documents are included in [Appendix E](#), starting on pages A-79 and A-97, respectively.

Outbound		64%	362	663	198	2,863	2,863	418	53%	128
			41%	72%	7%	7%	96%	53%		5%

Notes:

- [a] Numbers may not sum due to rounding.
- [b] Average vehicle occupancy rates vary depending on the time of day (i.e., analysis periods) as the proportion of trips generated by the various land uses components of the project, each one with a different average vehicle occupancy rate, is different depending on the time of the day. See Appendix B (pp. A-50 through A-62) for detailed vehicle occupancy and vehicle trip demand calculations for each individual land use.
- [c] For all analysis scenarios, the average vehicle occupancies and vehicle trips include the proposed office, retail, and restaurant uses, as well as an event or no event at the event center, depending on the analysis scenario (i.e., No Event, Basketball Game, Convention Event, etc.).
- [d] The average vehicle occupancy rate for a convention event includes trips by shuttle bus service with an average occupancy of 25 passengers per vehicle, per the Moscone Center Expansion Project EIR.

Source: Advant Consulting – January 2015.

FINAL MEMORANDUM (2nd update)
Case No. 2014.1441E

May 22, 2015
Page 23

Vehicle Trips: The overall number of vehicle trips generated by the proposed project by origin and destination is also presented in [Table 10](#).

No Event

During the weekday PM peak hour without an event, the proposed project land uses would generate 702 vehicle trips. On Saturdays without an event, the number of vehicle trips during the Saturday evening peak hour (785 vehicle trips) would be higher but comparable to those occurring during the weekday PM peak hour (702 vehicle trips). The number of vehicle trips would be higher because trip generation associated with the office uses would be minimal on a Saturday, and the reduction in office trip generation (with a higher transit than auto mode split) would be offset by a greater trip generation for the retail and restaurant uses (with a higher auto than transit mode split) on a Saturday than on a weekday.

With Event

On weekdays with a basketball game, the proposed project would generate 886 vehicle trips during the PM peak hour, and the number of vehicle trips would increase to 2,752 vehicle trips during the evening peak hour (mostly arrivals to the event center), and to 3,018 vehicle trips during the late evening peak hour (mostly departures from the event center). More vehicle trips would be generated by a basketball game during the weekday late evening peak hour than during the PM peak hour because arrivals (inbound trips) tend to be spread out over a longer period of time as sport fans shop, buy food or meet on their way to their seats, whereas departures (outbound trips) are typically concentrated within the one hour immediately following the conclusion of an event.

On Saturdays with a basketball game, the proposed project would generate 2,815 vehicle trips during the evening peak hour. As indicated in [Table 10](#), there would be a somewhat greater vehicle trip generation for a Saturday basketball game (2,815 vehicle trips) than for a weekday basketball game (2,752 vehicle trips) as more people tend to drive on weekends because of the typically lighter traffic, more parking availability, and less transit service (e.g., fewer routes and/or longer headways between buses on Saturdays than on weekdays). In addition, retail, and restaurant uses would generate more vehicle trips on a Saturday than on a weekday.

On weekdays with a convention event, the proposed project would generate 919 vehicle trips during the PM peak hour. A convention event would generate fewer weekday PM peak hour vehicles trips than a basketball game, as convention events would have both a lower event attendance (9,000 attendees for a convention event as compared to 18,064 attendees for a basketball game) and a higher non-automobile event-only mode share (70 percent transit/other mode for a convention event during the PM peak hour, as compared to 59 percent transit/other mode share for a basketball game during the PM peak hour; see [Table 9, p. 20](#)).

TRANSIT TRIPS BY PLACE OF ORIGIN

[Table 11](#) summarizes the transit trips generated by the proposed project for the various scenarios and time periods.

Table 11
Project Transit (Muni and Regional) Trips by Place of Origin and Time Period [a, b]

Place of Trip Origin/Destination	Weekday				Saturday	
	PM Peak Hour of the 4 to 6 PM period		Evening Peak Hour of the 6 to 8 PM period	Late Evening Peak Hour of the 9 to 11 PM period	Evening Peak Hour of the 7 to 9 PM period

FINAL MEMORANDUM (2nd update)
Case No. 2014.1441E

May 22, 2015
Page 25

LCW Consulting

No Event

During the weekday PM peak hour without an event, the proposed project land uses would generate 881 transit trips. On Saturdays without an event, the number of transit trips during the Saturday evening peak hour (673 transit trips) would be less than during the weekday PM peak hour (881 transit trips) due to the higher trip generation and greater transit mode share of the office use on a weekday.

With Event

On weekdays with a basketball game, the proposed project would generate 1,625 transit trips during the PM peak hour, and the number of transit trips would increase to 4,371 transit trips during the evening peak hour (mostly arrivals to the event center), and to 4,680 transit trips during the late evening peak hour (primarily departures from the event center). On Saturdays with a basketball game, the proposed project would generate 4,310 transit trips during the evening peak hour.

On weekdays with a convention event, the proposed project would generate 1,524 transit trips during the PM peak hour.

WALK/OTHER TRIPS BY PLACE OF ORIGIN

Table 12 summarizes the walk/other trips (i.e., walk, bicycle, motorcycle, taxi, and other modes) generated by the proposed project.

No Event

During the weekday PM peak hour without an event, the proposed project land uses would generate 570 walk/other trips. On Saturdays without an event, the number of walk/other trips during the Saturday evening peak hour (750 walk/other trips) would be more than during the weekday PM peak hour (570 walk/other trips) due to the higher trip generation of the restaurant uses on a Saturday at the later hour.

With Event

On weekdays with a basketball game, the proposed project would generate 590 walk/other trips during the PM peak hour, and the number of walk/other trips would increase to 1,368 walk/other trips during the evening peak hour (mostly arrivals to the event center), and to 1,258 walk/other trips during the late evening peak hour (primarily departures from the event center). On Saturdays with a basketball game, the proposed project would generate 681 walk/other trips during the evening peak hour.

On weekdays with a convention event, the proposed project would generate 2,098 walk/other trips during the PM peak hour.

FINAL MEMORANDUM (2nd update)
 Case No. 2014.1441E

May 22, 2015
 Page 27

PARKING DEMAND

Weekday and Saturday parking demand for the proposed project was determined based on methodologies presented in the *SF Guidelines*, supplemented with data obtained from the Urban Land Institute¹⁹ and the project sponsor on the characteristics of the event center, described above. Parking demand consists of both long-term demand (typically employees) and short-term demand (typically visitors).

Peak parking demand was estimated for the midday period (1 to 3 PM) when parking occupancy is typically greatest for office and retail uses, and for the late evening (7 to 9 PM) period when parking demand is greater for the basketball game and restaurant uses.

Long-term parking demand for the office, retail, and restaurant uses was estimated by applying the average mode split and vehicle occupancy from the trip generation estimation to the number of employees for each of the proposed land uses. Short-term parking for these uses was estimated based on the total daily vehicle visitor trips and an average daily parking turnover rate of 5.5 vehicles per space per day for the office, retail, and restaurant uses.²⁰

Parking demand for attendees at a basketball game and convention event were estimated based on the total number of attendee vehicle trips expected at each event (i.e., the maximum number of vehicles arriving for the event, not just during the analysis hours) and an average daily parking turnover rate (1 vehicle per space per day for all basketball games on weekdays and Saturdays, and 1.5 vehicles per space per day for convention events).²¹ Event employee parking demand was estimated by applying the average mode split and vehicle occupancy from the trip generation estimation described in the previous sections to the number of employees expected at each event.

Table 13 summarizes the estimated weekday and Saturday parking demand for the proposed project during the midday and late evening periods. Detailed parking demand calculations are presented in Appendix C (p. A-63).

¹⁹ Table 2-5 and Table 2-6 (pp. 16 and 17); Shared Parking, Urban Land Institute, Second Edition, 2005.

²⁰ Based on the *SF Guidelines*, Appendix G, page G-1. A turnover of 5.5 means that each parking is utilized by an average of 5.5 vehicles during the day.

²¹ See Appendix C, p. A-63.

Table 14
Project Delivery/Service Vehicle Trips and Loading Space Demand

Land Use	GSF	Daily Trucks/ Service Vehicle Trip Generation	Loading Space Demand	
			Average Hour Loading Spaces	Peak Hour Loading Spaces
Event Center ^[a]	750,000	30	7	7
Office	605,000	127	6	7
Retail	62,500	14	1	1
Restaurant	62,500	225	10	13
Total		396	24	28

Note:

[a] Represents maximum loading demand associated with non-GS Warriors events.

Source: *SF Guidelines*, GS Warriors, LCW Consulting – November 2014

In addition, as indicated in [Table 14](#), the event center would generate a demand of up to 30 delivery and service vehicle trips on the day prior to an event. Non-GS Warriors events would generate a greater number of delivery and service vehicle trips associated with show components (e.g., stage, sound equipment and controls, video equipment and controls, and props), as well as food and beverage trucks, than basketball games. As indicated in [Table 14](#), the event center would generate a loading space demand for seven loading spaces during the average and peak hour of loading activity. The loading space demand for seven loading spaces takes into consideration that the loading demand would occur over a shorter period (i.e., over a period of about four hours, rather than 9-hour period for the office, retail, and restaurant uses), and some loading spaces would be occupied for one or more days (e.g., TV crew trucks).

San Francisco Superdistrict Boundaries

The boundaries of the four San Francisco Superdistricts are based on the travel analysis zones established by the Metropolitan Transportation Commission (MTC). The four Superdistricts shown in this figure are aggregations of the MTC's 1454 Regional Travel Analysis Zones (May 2002) that encompasses the nine-county San Francisco Bay Area. MTC's 1454-zone system fits within the year 2000 U.S. Census tracts.

APPENDIX D
LOADING DEMAND CALCULATIONS

Event Center and Mixed-Use Development at Mission Bay Blocks 29-32
Truck and Service Vehicle Loading Demand

Land Use	Gross Square Feet	Truck Trip Generation Ratio (R)	Daily Trucks/Service Vehicles	Loading Space Demand	
				Average Hour	Peak Hour
Event Center	750,000 gsf	NA	30	7	7
Office	605,000 gsf	0.21	127	6	7
Retail	62,500 gsf	0.22	14	1	1
Restaurant	62,500 gsf	3.60	225	10	13
Total			396	24	28

General Loading Demand Equations (SF Guidelines)

for Office, Retail, Restaurant, and Cinema Uses

Daily Trips = (GSF / 1,000) * R
 Average Hour = (GSF / 1,000) * R / 9 / 2.4
 Peak Hour = (GSF / 1,000) * (R * 1.25) / 9 / 2.4

R = Daily truck trip generation per 1,000 gsf of use from Table H-1 in SF Guidelines

Arena Service Vehicles/Truck Deliveries

GSW Game vendor/service truck deliveries is 6 trucks per game scheduled to avoid peak commute hours.
 Non-GSW Event vendor/service truck deliveries are 20 trucks between 4 and 8 AM, and 6 food service trucks between 7 AM and 12 PM.
 TV crew trucks include 2 trucks/mobile units arrive at 10 AM and leave at 11:30 PM.
 ESPN/TNT games would have an additional 1 or 2 trucks that arrive day before the game.
 Source: Golden State Warriors

Event Center Loading Space Demand:

Based on SF Guidelines methodology, modified to reduce number of hours loading would occur, and activities that would occupy the loading dock for one to two days.
 Maximum number of deliveries would occur during non-GSW event = 20 vendor/service + 6 food service + up to 4 TV trucks = 30
 Peak loading period for 26 trucks would be between 4 and 8 AM = 4 hours. Up to 4 TV trucks occupy space for duration of event.

Memorandum

Date: October 18, 2007
 To: Pat Siefers, Department of Major Environmental Assessment
 From: Tim Erney
 Geoffrey Rubendall
 Subject: CityPlace Cross Shopping Survey Results

Introduction

DMJM Harris is pleased to submit this memorandum summarizing the results from the cross-shopping survey conducted as part of the transportation study for the project proposed for 935 Market Street (referred to as "CityPlace"). As specified in the approved scope of work dated September 6, 2007, DMJM Harris was commissioned to conduct surveys at two existing retail stores in the Union Square area to identify the level of cross-shopping (visitors visiting multiple stores in one shopping trip) in the project area. This survey was conducted to verify the results of another study commissioned by the project sponsor that found that visitors to large value-oriented shopping centers (like those proposed as part of this project) typically visit 1.8 stores per trip.

Survey Methodology

Approach:

During each survey, DMJM Harris staff were stationed at the doorway of each store and asked shoppers how many stores they planned to visit during their shopping trip. The responses from all shoppers were documented and tabulated.

Stores:

DMJM Harris conducted surveys at two stores in the Union Square area that are similar to those likely to be included in the proposed project. Through discussions with the project sponsor, the two stores chosen for the survey were the Ross store located at 799 Market Street and the H&M store located at 149 Powell Street.

Time Periods:

The surveys were conducted over a two-hour period at each store during the following three time periods:

- Weekend Midday Peak Period: 11am to 1pm – Saturday, September 22, 2007
- Weekday Midday Peak Period: 11am to 1pm – Wednesday, September 26, 2007
- Weekday PM Peak Period: 4pm to 6pm – Wednesday, September 26, 2007

Survey Results

The results of the surveys are presented in Table 1. As shown, the average shopper to these two stores planned to visit an average of about 2 ½ to 3 stores regardless of the time period of the shopping trip. The detailed results of the surveys are graphically illustrated in Figure 1. It should be noted that at both stores, weekend visitors typically visited more stores during their trips than weekday visitors.

Table 1: Survey Results

Store	Weekend Midday Peak Saturday, 9/22/07 11am to 1pm		Weekday Midday Peak Wednesday, 9/26/07 11am to 1pm		Weekday PM Peak Wednesday, 9/26/07 4pm to 6pm	
	# of Responses	Avg # Stores Visited	# of Responses	Avg # Stores Visited	# of Responses	Avg # Stores Visited
H&M	107	3.4	119	3.1	117	2.9
Ross	250	3.1	267	2.4	248	2.5
Total	357	3.2	386	2.6	365	2.6
			Overall		1,108	2.8

Source: DMJM Harris – October 2007

It should be noted that responses that were greater than five stores were put into a "5+" category. The above averages were calculated using the "5+" as five. Therefore, the averages presented in the above table are slightly underestimated.

Conclusions and Recommendations

As shown in the previous table and following charts, it was found that the stores surveyed exceeded the 1.8 stores per visit figure that was found in the previous survey commissioned by the project sponsor. Therefore, it is DMJM Harris' recommendation that the 1.8 cross-shopping factor is appropriate for the analysis to account for linked trips to other retail stores in the Union Square area. The 1.8 factor is a more conservative value than the factors calculated in this doorway survey, and was determined by a more detailed survey and supplemental research.

TECHNICAL MEMORANDUM

TO: Files

FROM: Stuart Gewirtzman

DATE: May 4, 2006

PROJECT: Atlantic Yards Arena and Redevelopment (PHA No. 0343E)

RE: Transportation Planning Assumptions

This memorandum summarizes the transportation planning assumptions to be used for the analysis of traffic, parking, transit and pedestrian conditions for the proposed Atlantic Yards Arena and Redevelopment project. Estimates of the proposed project's peak hour travel demand and trip assignment patterns are provided, along with discussions of the traffic, parking, transit and pedestrian study areas for the impact analyses.

PROJECT PROGRAM

The proposed Atlantic Yards Arena and Redevelopment project would be located on an approximately 22-acre site in the Atlantic Terminal area of Brooklyn, roughly bounded by Flatbush and Fourth Avenues on the west, Vanderbilt Avenue on the east, Atlantic Avenue on the north, and Dean Street on the south (see Figure 1). In addition to an approximately 850,000 gross-square-foot (gsf) arena for use by the Nets professional basketball team and other sporting and cultural events, it is anticipated that the proposed project would include residential, office, hotel, and local retail uses, approximately seven acres of publicly accessible open space, approximately 3,800 parking spaces, and an improved Long Island Rail Road (LIRR) yard. In addition to the arena, a total of 16 buildings would be constructed on the eight blocks comprising the project site. These buildings are referred to as Site 5 and Buildings 1 through 15.

The proposed development considers two program variations: residential mixed-use and commercial mixed-use (shown in Figures 2a and 2b, respectively). The variations reflect the fact that the programs for three of the project's 17 buildings are not fixed and could be

May 4, 2006

Atlantic Yards Arena and Redevelopment Project

Commercial Mixed-Use Variation Site Plan
Figure 2b

used for a mixture of residential and commercial uses. Under the commercial mixed-use variation additional commercial space would substitute for the hotel use and a majority of the residential space in Buildings 1 and 2 on the arena site (blocks 1118, 1119, and 1127) and on Site 5 (Block 927). The other buildings and uses on the project site (the arena and Buildings 3 through 15) would remain the same under both the residential mixed-use and commercial mixed-use variations. Table 1 compares the development programs for the proposed project's two variations. As shown in Table 1, along with the 18,000-seat arena (for basketball), the residential mixed-use variation would consist of a total of approximately 6,860 dwelling units, 606,000 gsf of commercial office space, a 180-room hotel, and 247,000 gsf of ground floor local retail space that would be distributed among Site 5 and Buildings 1 through 15. A total of approximately 3,800 parking spaces would also be provided in on-site parking garages. By contrast, the commercial mixed-use variation would include approximately 5,790 dwelling units, 1,829,000 gsf of commercial office space, and no hotel use, as well as a total of approximately 3,800 parking spaces. The arena and local retail uses would remain the same under both scenarios.

**Table 1
Project Development Program**

Component	Residential Mixed-Use Variation	Commercial Mixed-Use Variation
Arena	850,000 gsf (18,000 seats)	850,000 sf (18,000 seats)
Residential	6,860 D.U.	5,790 D.U.
Office	606,000 gsf	1,829,000 gsf
Local Retail	247,000 gsf	247,000 gsf
Hotel	165,000 gsf (180 rooms)	0 gsf
Parking	3,800 spaces	3,800 spaces

Both the residential mixed-use and the commercial mixed-use variations are expected to include community facility uses, including a health care center and an intergenerational community center offering child care and youth and senior activities. Community facilities built as part of the proposed project would occupy some portion of the 247,000 gsf of space included as local retail in Table 1. For the purposes of the travel demand forecast, all of this space is assumed to be local retail (i.e., retail establishments serving the needs of workers and residents in the neighborhood).

It is anticipated that the proposed project would be developed in two phases. Phase I, to be completed in 2010, would include the arena, Site 5, Buildings 1 through 4, and a new on-site entrance to the Atlantic Avenue/Pacific Street subway station complex on Block 1118

at the intersection of Flatbush and Atlantic Avenues. Two parking garages located on Site 5 and the Arena Block would be constructed, along with interim parking elsewhere on the project site. Also included in this phase would be the closure of the existing LIRR yard at the west end of the site and the development of an improved LIRR yard at the east end of the site along with a new portal for direct train access between the new yard and the LIRR's Atlantic Terminal. The remainder of the project, which includes construction of Buildings 5 through 15 and additional permanent parking, would be completed by 2016.

In addition to the development program outlined above, the proposed project would entail a number of permanent roadway closures and changes in street direction, including:

- the closure of Pacific Street between Flatbush Avenue and Sixth Avenue, and between Carlton and Vanderbilt Avenues;
- the closure of Fifth Avenue between Flatbush and Atlantic Avenues;
- the conversion of Sixth Avenue between Atlantic and Flatbush Avenues from one-way southbound to two-way operation (partly in response to the closure of Fifth Avenue); and
- the conversion of Carlton Avenue from one-way northbound to two-way operation between Atlantic Avenue and Pacific Street.

SELECTION OF PEAK HOURS FOR ANALYSIS

On weekdays, the proposed project's residential, office and local retail components are expected to generate their highest demand during the traditional 8-9 AM and 5-6 PM commuter periods as well as the 12-1 PM midday (lunch time) period. By contrast, a Nets basketball game at the arena would generate much of its travel demand during the weekday evening and nighttime periods and on weekends. On weekdays, for example, it is anticipated that a Nets basketball game or other event at the arena would typically start at 7:30 PM or 8 PM. A 7-8 PM peak hour was therefore selected for the analysis of weekday pre-game conditions as it is during this period that residual commuter demand and peak demand en route to a basketball game or other event at the arena would most likely overlap. The 10-11 PM peak hour was selected for the weekday nighttime period to coincide with the peak demand generated at the end of a basketball game or other event at the arena. For the weekend period, the 1-2 PM and 4-5 PM peak hours on a Saturday were selected for analysis to coincide with the start and end times of a weekend afternoon basketball game, respectively, as well as peak retail-based travel demand from on-site and other nearby retail uses in Downtown Brooklyn (Atlantic Center, for example).

The EIS traffic analyses will examine conditions in all seven peak hours identified above. Transit (subway and bus) analyses generally examine conditions during the weekday AM and PM peak commuter periods as it is during these times that overall transit demand (and the potential for significant adverse impacts) is typically greatest. As there would be some overlap between trips en route to the arena and commuter demand during the 7-8 PM pre-

game period, this peak hour will also be analyzed to identify potential impacts at subway station processors (e.g., entrance stairways, fare arrays, etc.). In addition to the weekday AM and PM peak commuter hours, the pedestrian analysis will also focus on the 7-8 PM pre-game and Saturday 1-2 PM midday peak hours as it is during these periods that trips en route to the arena would coincide with elevated demand on study area pedestrian facilities (from commuters and shoppers, respectively).

TRANSPORTATION PLANNING ASSUMPTIONS

The transportation planning assumptions used to forecast travel demand from the project's residential, office, hotel, local retail and arena components are summarized in Table 2 and discussed below. The trip generation rates, temporal distributions and mode choice assumptions shown in Table 2 were based on accepted CEQR criteria, standard professional references, and studies that have been done for similar uses in Downtown Brooklyn and Manhattan. These sources were supplemented by data from the 2000 Census, and Employee Commute Options survey data from firms and governmental/educational institutions in Downtown Brooklyn.

Residential

The forecasts of travel demand from the project's residential components were based on trip rates from *Urban Space for Pedestrians* (Pushkarev & Zupan, 1975) and *Trip Generation, 7th Edition* (ITE), and vehicle occupancy and temporal and directional distribution data from the *Downtown Brooklyn Development FEIS* (April 2004). The weekday modal split assumed for the residential components reflects journey-to-work data from the 2000 Census. Although residential-based trips in the midday would likely be more local in nature than in the peak commuter hours (and therefore have a higher walk share, for example), the modal split based on census journey-to-work data is conservatively assumed for all analyzed weekday peak periods. The modal split for the Saturday peak periods was adjusted to reflect anticipated higher walk and auto shares compared to the weekday periods.

Office

The travel demand forecasts for the project's office components were based on trip rates and temporal distributions from *Urban Space for Pedestrians* and the *Coliseum Redevelopment FSEIS* (July 1997). The estimated modal split and vehicle occupancies were derived from NYCDOT Employee Commute Options survey data from office firms and governmental/educational institutions in Downtown Brooklyn, as well as data from the *Downtown Brooklyn Development FEIS*.

Hotel

The travel demand forecast for the hotel that would be developed under the residential mixed-use variation (but not the commercial mixed-use variation) was based on data from the *Renaissance Plaza Expansion EAS* (March 2003) and from the *Marriott Hotel Transportation*

**Table 2

Survey (AKRF, August 1999). Saturday temporal distribution and truck trip generation assumptions were based on data from the *Coliseum Redevelopment FSEIS*.

Local Retail

The retail uses developed under both the residential mixed-use variation and the commercial mixed-use variation would be local (or "neighborhood") retail, attracting trips primarily from the residential and worker populations on-site and in surrounding neighborhoods. It is therefore anticipated that the majority of these trips would be via the walk mode, and that many would be "linked" trips (e.g., a trip with multiple purposes, such as stopping at a retail store while commuting to or from work) and would therefore not represent the addition of new discrete trips to the study area transportation systems. For the purposes of the travel demand forecast, it is conservatively assumed that 40 percent of retail trips would be such "linked" trips, consistent with the rates assumed for other retail developments in New York City. The travel demand forecasts for local retail uses were based on data from a variety of sources, including the *City Environmental Quality Review (CEQR) Technical Manual* (2001), *Coliseum Redevelopment FSEIS*, and *Downtown Brooklyn Development FEIS*.

Arena

The proposed 850,000 gsf Atlantic Yards Arena would accommodate 18,000 to 20,500 seats, depending on the event. The capacity for a basketball game, for example, would be 18,000 seats, whereas for a concert, ethnic event or religious/motivational show, additional space for seating could be available on the arena floor. As a reasonable worst case for the EIS transportation analyses, the weekday and Saturday travel demand forecasts examine the demand that would be generated by a Nets basketball game at the arena. A Nets basketball game was selected as a reasonable worst case scenario based on both the frequency of home games and the relatively high level of travel demand that such games are expected to generate compared to most other uses. Using the 2005-2006 season as a guide, approximately 41 games would occur at the arena during a typical basketball season from early November to late April (not including playoff games which could continue through June). Approximately 26 of these games would occur on a weekday, four on a weekend afternoon (Saturday or Sunday) and 11 on a weekend evening. Non-basketball events, such as concerts, ethnic shows, general fixed fee rentals (graduations, receptions, job fairs, etc.), religious/motivational shows, other sporting events, family shows and community events, are each expected to occur with less frequency, would often attract fewer spectators, and would typically generate a lower level of travel demand than a Nets basketball game.

The travel demand forecast for the arena assumes a sold-out game with 100 percent attendance for all 18,000 seats, and a daily trip generation rate of two trips per seat. It should be noted, however, that the actual number of spectators at a game is typically fewer than the number of tickets distributed, and that even a sold-out game typically has about 90 percent attendance. The daily trip generation rate of two trips per seat for all 18,000 seats therefore also accounts for trips by employees, players, coaches, team staff and other such non-spectator demand.

Data on the arrival patterns for spectators at a Knicks basketball game at Madison Square Garden reported in the August 26, 2003 *Madison Square Garden Modal Split Analysis* study was utilized to estimate the temporal distribution for trips to the Atlantic Yards Arena. Based on these data, it is estimated that approximately 75 percent of spectators en route to a basketball game would arrive in the peak one-hour period. The temporal distribution of post-game peak hour trips was estimated based on MTA subway ridership data for stations serving Madison Square Garden. Using a comparison of the subway ridership on both game days and non-game days, and the hourly variation in the demand attributable to Madison Square Garden, it is estimated that approximately 85 percent of spectators would typically depart the Atlantic Yards Arena in the peak one hour at the end of a basketball game.

In addition to trips by spectators before and after a Nets basketball game, it is anticipated that arena employees, players, coaches, team staff and other non-spectator visitors to the arena would generate trips outside of the immediate pre-game and post-game periods. As shown in the temporal distribution in Table 2, it is assumed that one percent of daily trips generated by the arena would occur in each of the weekday AM and midday peak hours, and five percent during the weekday 5-6 PM peak hour.

Trip origin and modal split assumptions for the Atlantic Yards Arena reflect the anticipated origin/destination distribution of arena spectators and the accessibility by transit of the proposed arena site in Downtown Brooklyn. The assumptions were developed from trip origin and modal split data reported in the *Madison Square Garden Modal Split Analysis* study, along with data specific to Downtown Brooklyn developed for other studies such as the *Downtown Brooklyn Development FEIS*. The derivations of the trip origin/destination and modal split assumptions for both a weekday and weekend sporting event at the proposed arena are presented in Appendix A. For example, it is anticipated that there would be a higher percentage of trips en route to the Atlantic Yards Arena from Brooklyn than for Madison Square Garden (30 percent versus 7 percent, respectively), and a lower percentage of trips with Manhattan origins (25 percent versus 36 percent, respectively). With its proximity to Penn Station, the Port Authority Bus Terminal, the PATH terminal at West 33rd Street and the Lincoln Tunnel, a sporting event at Madison Square Garden likely attracts a higher percentage of spectators from New Jersey than would be the case for an arena located in Downtown Brooklyn. The analysis therefore assumes that 13 percent of trips would be en route from New Jersey compared to 21 percent for Madison Square Garden.

As with trip origins, modal splits were correspondingly adjusted to reflect both the anticipated trip origins and the differences in transit access. For example, the combined weekday auto share from all origins was increased to 34.8 percent from the 29.7 percent experienced at Madison Square Garden, while the taxi share (which includes livery or "black" cars) was reduced (from 7.5 percent to 3.0 percent) in part to reflect the generally higher availability and usage of taxis in Manhattan. Trips from the northern and western suburbs served by PATH, NJ Transit and Metro-North were assumed to complete their journeys via the subway mode, accounting in part for a higher subway mode share than for Madison Square Garden (49.7 percent versus 23.6 percent on weekdays). A smaller percentage of trips were assumed to travel to the Atlantic Yards Arena via Long Island Rail Road compared to Madison Square Garden as there is no direct access to the LIRR's Brooklyn terminus from the Port Washington Branch. Walk-only trips were also assumed to be lower compared to Madison Square Garden

given the higher concentration of office space and overall employment in the Garden's midtown Manhattan location compared to Downtown Brooklyn.

Table 3
Travel Demand Forecast for the Residential Mixed-Use Variation - 2016
(Person Trips)

Based on discussions with MTA New York City Transit concerning the anticipated travel characteristics of arena patrons, separate trip origin/destination and modal split assumptions have been assumed for persons arriving and departing the arena. On weekdays it is likely that some spectators would travel to the arena from workplaces in one borough or county, and then depart en route to residences in a different borough or county at the conclusion of a game, sometimes by a different mode of travel. For example, it is likely that some spectators would travel to the arena from Manhattan by subway, and then to homes on Long Island via the Long Island Rail Road's Atlantic Terminal. Others may walk from workplaces in Downtown Brooklyn and then drive home to New Jersey. These work-based trips en route to the arena are more likely to be made by transit (primarily subway) than would be the case for post-game trips en route home which are more likely to have higher auto and commuter rail shares. The trip destination and modal split assumptions shown in Appendix A for persons departing the arena on a weekday therefore reflect a lower Manhattan share than for trips en route to the arena (20 percent versus 25 percent), and a lower subway share (46.7 percent versus 49.7 percent). The auto mode share is slightly higher for trips departing the arena (35.9 percent versus 34.8 percent) as is the LIRR share (9.8 percent versus 7.8 percent), reflecting the expected higher percentage of trips with end points outside of Manhattan in the post-game period. As work-based trips would be minimal on weekends, the travel demand forecast assumes a general balance of trip origins and destinations for the Saturday peak hours.

Truck Trips

Truck trip generation rates and temporal distributions for the project's residential, hotel and local retail components were based on data from the *Coliseum Redevelopment FSEIS* and from *Curbside Pick-Up & Delivery Operations and Arterial Traffic Impacts* (FHWA, February 1981). Truck travel demand for the project's office component was based on data from surveys at existing office buildings in Midtown and Lower Manhattan. The truck trip generation forecast for the arena was derived from projections for arena loading dock usage provided by the project sponsors. These truck trips include deliveries of food and supplies, general deliveries (e.g., UPS, Fed Ex, etc.), and trucks associated with television broadcasts.

TRIP GENERATION

Tables 3 and 4 show the trip generation in peak hour person trips that would result in 2016 from the full build-out of the residential mixed-use and commercial mixed-use variations, respectively. A comparison of the total peak hour person trips generated by each scenario is presented in Table 5 along with the total numbers of peak hour vehicle trips (auto, taxi and truck) and person trips by transit (subway, bus and LIRR).

It should be noted that the residential mixed-use variation and the commercial mixed-use variation would both displace existing land uses on the project site, such as the 46,913 square feet of retail (a Modell's Sporting Goods store and a P.C. Richards consumer electronics

Table 5
Comparison of 2016 Peak Hour Travel
Residential Variation vs. Commercial Variation

Person Trips

Peak Hour	Residential Variation	Commercial Variation	Net Difference	% Difference
8-9 AM	7,698	9,442	(1,744)	(23%)
12-1 PM (midday)	10,411	13,105	(2,694)	(26%)
5-6 PM	12,221	14,230	(2,009)	(16%)
7-8 PM (pre-game)	19,511	19,608	(97)	(1%)
10-11 PM (post-game)	17,509	17,313	196	1%
Saturday 1-2 PM	20,273	19,741	532	3%
Saturday 4-5 PM	22,181	21,634	547	3%

Vehicle Trips (Auto/Taxi/Truck)

Peak Hour	Residential Variation	Commercial Variation	Net Difference	% Difference
8-9 AM	972	1,099	(127)	(13%)
12-1 PM (midday)	718	728	(10)	(1%)
5-6 PM	1,331	1,489	(158)	(12%)
7-8 PM (pre-game)	3,020	2,989	31	1%
10-11 PM (post-game)	2,981	2,952	29	1%
Saturday 1-2 PM	3,050	2,919	131	4%
Saturday 4-5 PM	3,380	3,251	129	4%

Transit Trips (Subway/Bus/LIRR)

Peak Hour	Residential Variation	Commercial Variation	Net Difference	% Difference
8-9 AM	5,362	6,904	(1,542)	(29%)
12-1 PM (midday)	3,881	3,997	(116)	(3%)
5-6 PM	7,564	9,342	(1,778)	(24%)
7-8 PM (pre-game)	12,131	12,301	(170)	(1%)
10-11 PM (post-game)	10,452	10,321	131	1%
Saturday 1-2 PM	9,860	9,569	291	3%
Saturday 4-5 PM	10,909	10,755	154	1%

store) currently located on Block 927 (Site 5). However, the travel demand forecast conservatively assumes no credit for the travel demand from these existing uses that would be displaced in the Build condition.

As shown in Table 5, the number of person trips generated by the residential mixed-use variation (inbound and outbound combined) would range from 7,698 in the AM peak hour to 22,181 in the Saturday 4-5 PM post-game peak hour. The commercial mixed-use variation, would generate from 9,442 peak hour person trips (in the AM) to 21,634 (in the Saturday 4-5 PM post-game). The commercial mixed-use variation would generate 1,744 more trips than the proposed project in the weekday AM peak hour, 2,694 more trips in the midday, 2,009 more trips in the PM peak hour. By contrast, the residential mixed-use variation would generate 532 more person trips than the commercial mixed-use variation during the Saturday 1-2 PM pre-game peak hour, and 547 more trips in the Saturday 4-5 PM post-game peak hour. During the weekday 7-8 PM pre-game and 10-11 PM post-game periods, the travel demand from the two variations would differ by roughly one percent (fewer than 200 trips).

The numbers of peak hour vehicle trips that would be generated by the residential mixed-use variation and the commercial mixed-use variation are also summarized in Table 5, and are shown in detail in Tables 6 and 7, respectively. As was the case for person trips, the commercial mixed-use variation would generate more vehicle trips (from 10 to 158 more) in the AM, midday and PM peak hours, while the residential mixed-use variation would generate a higher number of trips in the Saturday pre-game and post-game peak hours (131 and 129 more, respectively). During the weekday 7-8 PM pre-game and 10-11 PM post-game periods, the number of vehicle trips generated by the two variations are virtually the same, differing by roughly one percent (31 and 29 trips, respectively).

As demonstrated by the data in Table 5, the commercial mixed-use variation would generate a substantially higher level of total travel demand (from 16 to 26 percent higher) compared to the residential mixed-use variation in the key weekday AM, midday and PM peak hours. During the weekday 7-8 PM and 10-11 PM periods, the demand from the two variations would be roughly equivalent, differing by approximately one percent. By contrast, on Saturdays the residential mixed-use variation would generate approximately three percent more trips than the commercial mixed-use variation during the 1-2 PM and 4-5 PM peak hours. The commercial mixed-use variation was therefore selected as the reasonable worst case scenario (RWCS) for the weekday transportation analyses, while the residential mixed-use variation is analyzed as the RWCS for the two Saturday peak hours.

As shown in Table 4, under the commercial mixed-use variation, new trips by subway are expected to total 5,954, 8,002 and 10,536 during the analyzed weekday 8-9 AM, 5-6 PM and 7-8 PM peak hours, respectively. New bus trips would total 413 and 605 during the weekday 8-9 AM and 5-6 PM peak hours analyzed for potential bus impacts. New weekday peak hour trips on the Long Island Rail Road would range from 54 (in the midday) to 1,501 (in the 10-11 PM post-game peak hour). As shown in Table 7, the commercial mixed-use variation is expected to add between 438 and 2,581 autos to the study area street system in each weekday peak hour, and from 120 to 412 new taxi trips. Peak hour truck trips would increase by from 6 to 84 in each weekday peak hour. In general, the highest numbers of new weekday vehicle trips would occur during the 7-8 PM (pre-game) and 10-11 PM (post-

game) peak hours, primarily as a result of demand en route to and from the arena. As shown in Table 6, on Saturdays, the residential mixed-use variation (the RWCS for the Saturday analyses) would add an estimated 2,638 auto, 402 taxi and 10 truck trips to the street system in the 1-2 PM peak hour, and 2,922 auto, 458 taxi and no truck trips in the 4-5 PM peak hour.

PARKING DEMAND

Based on the travel demand assumptions discussed above, the proposed arena is expected to generate a daily parking demand of approximately 2,800 spaces on a typical Nets weekday game day, and approximately 2,600 spaces on weekends. Although some of this parking demand would be generated by arena employees and non-spectator visitors over the course of a day, the majority of the demand would occur during game times on weekday evenings, as well as on weekends.

Parking demand generated by new residential development will be forecast assuming a rate of 0.4 spaces per dwelling unit based on auto ownership data from the 2000 Census for neighborhoods in the vicinity of the site. (This rate is also consistent with the rate assumed for the residential component of the Downtown Brooklyn Development project.) The rate assumed for parking demand from new hotel space – 0.20 spaces per room overnight – is based on data from the *Renaissance Plaza Expansion EAS*. Parking demand from new office and retail space will be derived from the forecasts of daily auto trips for these uses.

To accommodate projected parking demand, it is anticipated that both the residential mixed-use variation and the commercial mixed-used variation would include approximately 3,800 spaces in parking garages located on Site 5, the Arena Block and blocks 1120, 1128 and 1129. These shared parking facilities would service demand from all project components – arena, residential and commercial. Office and retail demand would peak in the midday period and decline during the afternoon and evening, allowing for additional capacity to be used for residential and hotel demand (which typically peak in the overnight) and for demand from the arena. With the exception of the arena, parking demand generated under either variation would be fully accommodated in the off-street parking facilities that would be developed on-site. Accounting for commercial and residential demand, it is anticipated that approximately 1,100 spaces would be available on-site on weekdays to accommodate the parking needs of the arena, while the remaining arena demand (totaling approximately 1,700 spaces) would be accommodated at public off-street parking facilities located in the vicinity. The analysis of off-street parking will therefore examine conditions at public off-street parking facilities within a 1/2-mile radius of the arena. On-street parking conditions within 1/4-mile of the site will also be examined to determine the effects of street closures and other changes in on-street parking supply in the vicinity of the project site.

TRIP ASSIGNMENT

Auto/Taxi

The distribution of auto and taxi trips for each project component (office, residential, hotel, local retail and arena) by borough/county or region is shown in Table 8. The distributions for office, residential and hotel uses were based on data from the 2000 Census, while the assignment for the arena component was based on data from both the Downtown Brooklyn Development project and the expected geographical distribution of demand to the arena (see "Transportation Planning Assumptions," above). Given the differences in their travel demand characteristics, each project component is expected to have a unique trip assignment pattern. For example, a majority of the auto trips generated by the residential and hotel components are expected to have endpoints in Manhattan (60%) and Brooklyn (33%), while office trips are expected to be more widely dispersed, with five percent en route to/from Manhattan, 53 percent to/from Brooklyn, 17 percent to/from Queens, eight percent to/from Long Island and five percent to/from New Jersey. The arena is expected to draw not only from Brooklyn, Queens and Manhattan, but also from New Jersey and Long Island. As previously discussed, separate assignments for trips arriving and departing the arena on weekdays are assumed in order to reflect the fact that on weekdays some spectators would likely travel to the arena from their workplaces, and then depart to residences in a different borough or county at the conclusion of a game. As the project's retail component is expected to consist primarily of local retail uses serving the surrounding worker and residential populations, all of its trips are expected to be local Brooklyn-based.

Auto and taxi trips will be assigned to the primary corridors providing access to and from the project site based on their origin or destination as well as the most direct routes to major access points such as the Brooklyn-Queens Expressway and Brooklyn and Manhattan bridges. The auto and taxi trip assignment patterns along the corridors providing access to Site 5 and the Arena Block are illustrated in Appendix B, while the assignments for auto and taxi trips en route to and from Blocks 1120, 1121, 1128 and 1129 are provided in Appendix C. The assignments of auto and taxi (as well as truck) trips will take into account changes to the study area traffic network that are expected to occur by the 2010 and 2016 Build years as a result of No Build developments and initiatives by NYCDOT and other agencies. These include street closures and changes in street directions proposed as mitigation for the Downtown Brooklyn Development project.

As discussed above, it is anticipated that approximately 1,100 spaces would be available on-site to accommodate the parking needs of the arena, while the remaining arena demand (totaling approximately 1,700 spaces on weekdays) would be accommodated at public off-street facilities located in the vicinity. The assignment of arena auto trips will therefore reflect this distribution of trips to both on-site parking facilities and directly to off-site parking facilities.

Truck

Truck trips en route to and from the site will be assigned to designated local and through truck routes in Downtown Brooklyn. These include Atlantic, Flatbush, Third, and Fourth Avenues, and portions of Fifth Avenue and Bergen Street.

Atlantic Yards Arena and Redevelopment Project

Traffic Study Area

Figure 3

Diverted Traffic

In addition to the project's generating new travel demand by autos, taxis and trucks, permanent roadway closures and changes in street direction associated with the proposed project would alter traffic flows in the vicinity of the project site in the 2010 and 2016 analysis years. These would include the permanent closure of Pacific Street between Flatbush and Sixth Avenues, and between Carlton and Vanderbilt Avenues; and the permanent closure of Fifth Avenue between Flatbush and Atlantic Avenues. Sixth Avenue would be converted from one-way southbound to two-way operation between Atlantic and Flatbush Avenues both to facilitate access to and from the project site and to provide an alternative route for some of the traffic diverted off of Fifth Avenue. Carlton Avenue would be converted from one-way northbound to two-way operation between Atlantic Avenue and Pacific Street, also to provide for local circulation. The analysis of 2010 and 2016 Build traffic conditions will assume that No Build traffic diverted off of Fifth Avenue would be distributed among parallel north-south corridors, including Fourth Avenue, Flatbush Avenue and Sixth Avenue. As the segments of Pacific Street to be closed primarily provide access to adjacent land uses, diversions as a result of these closures are expected to be localized.

Transit/Pedestrian

The distribution of project-generated subway trips for each project component by borough/county or region is shown in Table 9. As was the case for auto and taxi trips, these assignment patterns were based on Census data and data from the Downtown Brooklyn Development project and the arena demand distribution. They differ from the assignment of auto trips primarily with respect to the project's arena component. As shown in Table 9, from 36 to 43 percent of subway trips generated by the arena are expected to be en route to or from Manhattan, 24 to 26 percent en route to or from Brooklyn and 10 to 12 percent en route to or from Queens. Arena spectators en route to or from New Jersey via PATH or NJ Transit trains and buses would account for approximately 14 to 18 percent of subway trips.

Project-generated bus and walk trips are assumed to be local within Brooklyn. Trips by commuter rail (i.e., Long Island Rail Road) are assumed to have origins or destinations primarily in Nassau or Suffolk counties.

TRAFFIC STUDY AREA

As shown in Figure 3, the traffic study area, which extends upwards of 1.2 miles from the project site, is bounded on the north by Tillary Street/Park Avenue, on the south by Eastern Parkway/Union Street, on the east by Grand Avenue, and on the west by Hicks Street. The study area encompasses a total of 93 intersections along local streets proximate to the project site or that would likely be affected by project-related changes to the street network, as well as along arterials that would provide access to or from the site. Given the numerous corridors providing access to the project site, including Atlantic, Flatbush, Carlton, Vanderbilt, Washington, Third, Fourth, Fifth and Sixth avenues, project-generated traffic is expected to be widely dispersed to the north, south, east and west, and is expected to become rapidly

**Table 9

Notes:

¹Source: 2000 Census data.

less concentrated with increasing distance from the project site. The traffic study area therefore focuses on locations where new traffic is expected to be most concentrated, and does not include more distant locations along regional access corridors such as the BQE, Brooklyn-Battery Tunnel or across the East River Bridges to Manhattan. The study area does, however, include key intersections along corridors connecting these regional access routes and the project site (including all intersections along Flatbush Avenue Extension as far north as Tillary Street).

SUBWAY STATIONS SELECTED FOR ANALYSIS

As part of the proposed project, improvements to the Atlantic Avenue/Pacific Street subway station complex would provide direct access between the project site and the subway routes serving this facility (the B, D, M, N, Q, R and Nos. 2, 3, 4 and 5 trains). The large majority of project-generated subway trips are therefore expected to utilize this station complex. However, some trips are also expected to occur at other stations that are either served by trains not accessible at Atlantic Avenue/Pacific Street or that would also provide reasonably convenient access to the project site. For example, some trips by Nos. (2) and (3) trains would likely use the Bergen Street station given its proximity to the proposed buildings along Sixth Avenue and on blocks to the east. The Fulton Street (G) station, the Lafayette Avenue (C) station, and the Washington-Clinton Avenues (C) station would also be used by project-generated trips as neither (C) train nor (G) train service is available at Atlantic Avenue/Pacific Street.

Table 10 shows the numbers of new entering and exiting subway trips that would be generated by the commercial mixed-use variation at each of these stations in the three peak hours analyzed for subway station impacts (weekday AM, PM and 7-8 PM pre-game). The *CEQR Technical Manual* typically requires a detailed analysis of a subway station when the incremental increase in peak hour trips totals 200 persons per hour or more. As shown in Table 10, new subway trips generated by the commercial mixed-use variation would exceed this threshold in one or more analyzed peak hours at the Atlantic Avenue/Pacific Street station complex (upwards of 9,549 new trips in each peak hour), Bergen Street station (upwards of 346 new trips in each analyzed peak hour), the Lafayette Avenue station (upwards of 467 new trips in each peak hour), and the Fulton Street station (246 and 254 new trips in the 5-6 PM and 7-8 PM peak hours, respectively). These stations were therefore selected for quantitative analysis in the EIS.

The analysis of subway station conditions will examine key station elements, including stairways, escalators, walkways and fare arrays, under peak 15-minute flow conditions. As subway demand generated by the arena is expected to be heavily surged, especially at the conclusion of an event such as a Nets basketball game, the analysis will incorporate peaking factors of 1.36 for arena subway trips during the 7-8 PM pre-game period and 1.84 for trips during the 10-11 PM post-game period. These factors were derived from data in the *Madison Square Garden Modal Split Analysis* study and MTA ridership data from stations serving Madison Square Garden.

ASSIGNMENT OF PROJECT-GENERATED BUS TRIPS

Downtown Brooklyn is well served by numerous bus routes operated by MTA New York City Transit (NYC Transit), and many of these routes operate in close proximity to the project site along Atlantic, Flatbush, Third, Fifth and Vanderbilt Avenues, and Dean, Bergen and Fulton Streets. Bus patrons en route to and from the project site would therefore likely find it unnecessary to walk substantial distances to access a needed bus service. Consequently, the analysis of project-generated bus trips focuses on the 12 routes located within 1/4-mile of the site, as it is on these routes that project trips would be most heavily concentrated. These routes include the B25, B26, B37, B38, B41, B45, B52, B63, B65, B67, B69 and B103. Assignment of project increment bus trips to individual routes will be based on existing demand patterns and the relative proximity of each route to the proposed development blocks.

ASSIGNMENT OF PROJECT-GENERATED PEDESTRIAN TRIPS

Figure 4 shows the sidewalk, corner area and crosswalk locations selected for analysis of potential pedestrian impacts. These locations were selected as they serve as key links between the project site and the surrounding street system, and/or would be used by concentrations of project-generated pedestrian demand linked to other modes (i.e., en route to subway stations, bus stops or off-site parking garages). The majority of subway-linked

pedestrian trips would be assigned to the proposed new on-site entrance to the Atlantic Avenue/Pacific Street station complex. Additional subway-linked pedestrian trips would be assigned to corridors connecting the site to other nearby stations. Pedestrians linked to the bus mode are expected to be most concentrated along Flatbush and Atlantic Avenues where stops for many of the routes are located. Some pedestrian trips are also expected to cross Atlantic Avenue to access bus routes operating along Fulton Street. Pedestrians walking between off-site parking facilities and the arena are expected to be most concentrated at the crosswalks at the intersection of Flatbush and Atlantic Avenues as the majority of off-site parking facilities are located to the north and west of the project site. Parking demand from the project's commercial and residential components would be fully accommodated at on-site facilities, and are not expected to generate substantial walk trips outside of the project site. Walk-only trips (i.e., walk trips not associated with other modes) would be widely dispersed among links between the project site and the surrounding street system.

FINAL

MEMORANDUM

TO: G. Price, NYC Department of City Planning
 M. Amjadi, NYC Department of City Planning

FROM: E. Metzger

DATE: November 11, 2003

RE: CM-1189R/C-26501– Preparation of a Draft and Final Environmental Impact Statement and Provision of Transit Engineering Services for the Proposed No. 7 Subway Extension-Far West Midtown Manhattan Rezoning

SUBJECT: Madison Square Garden Relocation and Expansion Transportation Planning Assumptions

CIN: MTA-NYC Transit/CM 1189R-C26501-00-C-1.00-DCP-03F-1689

This technical memorandum provides a summary of the transportation planning assumptions proposed to be utilized for a potential relocation and expansion of Madison Square Garden (MSG) in the traffic, parking, transit, and pedestrian analyses of the DGEIS. Under the proposed action, MSG – currently located on the western portion of the block bounded by West 31st Street, West 33rd Street, Seventh Avenue, and Eighth Avenue – would move approximately one and a half blocks to the west (to the eastern portion of the block bounded by West 31st Street, West 33rd Street, Ninth Avenue, and Tenth Avenue). Regardless of its future location¹, the DGEIS will also assume that the overall seating capacity of MSG would be increased.²

Background

MSG is the home of three sports franchises: the New York Rangers (NHL hockey), New York Knicks (NBA basketball), and New York Liberty (WNBA basketball). Its 19,500-seat³ arena serves as a venue for a number of other events including concerts, college basketball games, and the circus. MSG also includes a theater that can accommodate up to 5,600 spectators, which currently hosts concerts, boxing, family shows, and annual events such as the NBA and NFL drafts. A 36,000 square foot expo center is located adjacent to the arena and is used for trade shows, consumer fairs, and also provides additional storage space for certain events held on the arena floor.

A comprehensive list of all events held at MSG in 2002 (including events held in the arena, theater, and expo center) is provided in Table 1. For clarity, dark days (days when no events were scheduled), including days reserved for loading, unloading, and storage activities are designated by shading. As shown in Table 1, MSG's peak period throughout the year generally coincides with the New York Rangers' and New York Knicks' seasons during the late fall, winter, and early spring. In 2002, a total of 266 arena events were held on 224 days (there were 30 days on which multiple events were held; nearly half of these days involved circus

¹ An alternative to the proposed action includes MSG remaining at its present location.

² The NYCDP Hudson Yards Development Scenarios indicate that the arena seating capacity of MSG would increase from 19,500 to 23,000.

³ Actual attendance capacity varies by event (see Table 5).

Color Key:

Dark Day (includes loading, unloading, and/or storage activities)

performances). Over the course of the year, 141 dark days occurred at the arena (109 on weekdays, 13 on Saturdays, and 19 on Sundays).

Table 1 also illustrates the pattern in the scheduling of events held at the theater and expo center. Out of the 177 events held at the theater in 2002, 83 involved performances of “Sesame Street Live” and “A Christmas Carol”, two productions that primarily occurred during the months of February and December, respectively. Multiple performances of these shows (typically three) were usually held on the same day. For this reason, there were only 120 days on which events were scheduled (there were 39 days on which multiple events were held – 22 of these involved performances of “A Christmas Carol”). Over the course of the year, there were 245 days on which there was no event at the theater (178 of the dark days were on weekdays, 27 were on Saturdays, and 40 were on Sundays). As shown in Table 1, when compared to the arena and theater, there were relatively few public events held at the expo center over the course of the entire year (there were only 38 days with events).

Arena events in 2002 were tabulated by event type based on the schedule shown in Table 1 and additionally sorted by weekdays, Saturdays, and Sundays. Table 2 shows that the majority of weekday events involve basketball games, hockey games, concerts, and circus performances; the pattern of events on Sundays is more pronounced and primarily involves basketball and hockey games. Most of the weekend concerts tended to occur on Saturdays.⁴

Table 2: Distribution of 2002 MSG Arena Events

Event Type	Weekday	Saturday	Sunday	Total
Basketball (College)	13	7	1	21
Basketball (NBA)	29	8	7	44
Basketball (Other)	5	0	0	5
Basketball (WNBA)	12	2	7	21

Religious	6	3	2	11
Track	1	1	0	2
Wrestling	3	1	1	5
Totals	173	54	39	266

Source: Madison Square Garden, 2003.

Table 3 provides a similar tabulation of 2002 events held in the theater, which is also sorted by weekdays, Saturdays, and Sundays. This table indicates that nearly half of all theater events involved performances of “Sesame Street Live” (categorized as a family show) or “A Christmas Carol” (categorized as a musical). Although there were a significant amount of comedy events (34), many of these were competitions that took place in the theater lobby (which has a smaller seating capacity of approximately 500-600). A review of Table 3 shows that there were substantially fewer events at the theater on Sundays (26) compared to Saturdays (49) and that approximately 80% of the Sunday events involved performances of the family show or musical.

Table 3: Distribution of 2002 MSG Theater Events

Event Type	Weekday	Saturday	Sunday	Total
Awards	3	0	0	3
Boxing	2	2	0	4
Comedy	22	10	2	34
Concert	5	3	1	9
Draft	1	1	1	3
Family Show	10	6	6	22
Graduation	11	0	0	11
Meeting	4	0	0	4
Musical	27	19	15	61
Other	12	4	0	16
Religious	5	4	1	10
Totals	102	49	26	177

Source: Madison Square Garden, 2003.

Table 4 shows the distribution of arena and theater events that were held on the same day at MSG in 2002 and compares their differences in start times. Events with overlapping arrival periods were assumed to include all events with differences in start times of less than one hour. As shown in Table 4, there were overlaps on slightly less than half of the weekdays when events were held at the two venues. A review of these events indicates that approximately half of these overlaps involve events in the theater lobby. As shown in Table 4, there were no overlapping events on Sundays since all events had differences in start times of one hour or greater.

Table 4: Relationship between 2002 Arena and Theater Events Held On Same Day

Day of Week	Difference in Start Times				Total Events
	Same	½ Hour	1 Hour	> 1 Hour	
Weekday	10	10	7	25	52
Saturday	3	6	5	6	20
Sunday	0	0	3	4	7
Totals	13	16	15	35	79

Existing Attendance Patterns

Table 5 presents detailed data about the major types of arena events (concerts, NBA basketball, WNBA basketball, college basketball, NHL hockey, and the circus). This table includes typical event durations, attendance capacities, and existing 85th percentile attendances.⁵ Although both the New York Knicks and New York Rangers currently tend to sell out many of their games, the Knicks games have the highest 85th percentile attendance out of all events. As shown in Table 5, the 85th percentile attendances at WNBA basketball games and circus performances are significantly lower compared to the other major events; for this reason a WNBA basketball game or circus performance would not be expected to constitute the reasonable worst-case scenario for the analysis of transportation-related impacts. According to Madison Square Garden management, although concert attendance varies, a significant

⁴ Although there were a total of 9 Sunday circus performances, these occurred over a period of 3 Sundays (multiple shows were held on each date).

⁵ 85th percentile attendances will be used to develop a reasonable worst-case scenario that would occur with enough frequency to warrant consideration for analysis.

number of concerts sell out every year. Therefore, the events that have the highest 85th percentile attendances involve NBA basketball games, concerts, and NHL hockey games.

Table 5: Existing Arena Capacity and Approximate Duration of Events

Event Type	Typical Duration ¹	Attendance Capacity ²	85 th Percentile Attendances		
			Overall	Weekday	Weekend
Concert	3+ hours	20,629	17,977	18,301	16,476
NBA Basketball	2 ½ hours	20,024	19,023 ³		
WNBA Basketball	2 hours	20,024	11,605	11,221	12,126
College Basketball	2 hours	20,024	16,012	14,389	16,167
NHL Hockey	2 ¾ hours	18,295	17,380 ³		
Circus	2 ½ hours	18,295	13,687	13,686	13,062

Sources: Madison Square Garden and Sam Schwartz LLC, 2003.

Notes: (1) Listed durations are minimum times and do not include overtime or unexpected delays. (2) Includes seats and suites. (3) Most of these events are sold out; Sam Schwartz LLC estimates indicate that actual attendances range between 95% and 100% of capacity.

Travel Surveys

To establish the existing travel patterns of MSG attendees, travel surveys conducted by Vollmer Associates in the fall of 1987 were utilized.⁶ These surveys included interviews to determine modes of travel specific to the origins of attendees at the following three weeknight events:

- Cars Concert (Thursday, October 29, 1987 @ 8:00 pm);
- New York Knicks vs. Boston Celtics (Monday, November 9, 1987 @ 7:30 pm); and
- New York Rangers vs. New Jersey Devils (Tuesday, November 10, 1987 @ 7:30 pm).

Additional surveys at MSG were conducted by Sam Schwartz LLC in the spring of 2003.⁷ These surveys were used to determine temporal distributions, vehicle occupancies, and to approximate variations in travel patterns between a weekday and a Sunday sports event. Events that were surveyed included:

- New York Knicks vs. Milwaukee Bucks (Sunday, March 16, 2003 @ 7:00 pm);
- New York Knicks vs. Toronto Raptors (Monday, March 24, 2003 @ 7:30 pm);
- New York Knicks vs. New Jersey Nets (Friday, March 28, 2003 @ 8:00 pm);
- New York Rangers vs. Pittsburgh Penguins (Wednesday, March 26, 2003 @ 7:30 pm);
- New York Rangers vs. New Jersey Devils (Friday, April 4, 2003 @ 7:30 pm); and
- Red Hot Chili Peppers Concert (Tuesday, May 20, 2003 @ 8:00 pm).

Trip Origins

A comparison of trip origins from the three weeknight events surveyed (concert, Rangers game, and Knicks game) is presented in Table 6. The table also includes an average distribution of origins for the weeknight sports events and a projected distribution of origins for Sunday sports events. As shown in the table, the percentage of Manhattan origins is highest for the weeknight sports events; this variation is likely attributed to the large percentage of attendees that go to these types of MSG events directly from work in Manhattan.

⁶ Technical Memorandum A-4, Madison Square Garden Attendance Profile, Vollmer Associates, 1987.

⁷ Madison Square Garden Modal Split Analysis, Sam Schwartz LLC, August 26, 2003.

Table 6: Trip Origins of MSG Attendees

Region	Weeknight Concert	Weeknight Rangers Game	Weeknight Knicks Game	Weeknight Sports Average	Sunday Sports Event ¹
Staten Island	2.7%	1.7%	1.6%	1.6%	0.5%
Manhattan	20.8%	34.8%	38.8%	36.8%	30.3%
Brooklyn	11.6%	7.2%	8.2%	7.7%	9.8%
Bronx	4.6%	2.6%	3.7%	3.2%	2.3%
Queens	14.0%	8.3%	11.8%	10.1%	11.6%
Long Island	15.4%	13.2%	9.0%	11.1%	12.7%
Westchester	14.2%	5.7%	4.6%	5.1%	7.1%
Rockland	0.8%	1.1%	7.4%	4.3%	4.3%
New Jersey	13.9%	22.1%	9.6%	15.7%	17.0%
Connecticut	1.9%	3.2%	5.4%	4.3%	4.3%

Sources: Vollmer Associates, 1987.

Notes: (1) Estimated based on weeknight sports average using Sam Schwartz LLC surveys. (2) Sum of origins do not total 100% due to rounding.

Existing and Projected Modal Splits

In order to develop trip assignments specific for each mode of travel, modal splits expanded to a regional basis will be utilized. Table 7 shows modal splits by region for a weeknight concert, a weeknight sports event, and a Sunday sports event. The table also includes the weighted average modal splits, which were calculated by applying the respective trip origins (listed in Table 6) to the regional modal splits. The results show that overall auto usage is consistent for weeknight events (31.7% for the concert and 33.7% for the sports events) and is higher (48.4%) for a Sunday sports event. In contrast, overall transit usage is highest for a weeknight concert (51.8%) and lowest for a Sunday sports event (34.8%).

In order to account for a potential relocation of Madison Square Garden to a location one and a half blocks west of its existing location, auto and taxi modal splits were increased by 7.5% and 5%, respectively, to account for a reduced access to transit services. This is similar to the methodology that was used to develop modal split assumptions for sports events at the proposed nearby multi-use facility based the existing MSG travel surveys⁸. The resulting modal splits are shown in Table 8. It is anticipated that given the existing and projected location of MSG, the existing and projected modal splits would be affected by neither the No. 7 subway extension nor the LIRR East Side Access project.

Temporal Distributions

Table 9 shows the results of the temporal distributions obtained from the MSG door counts. Based on the results of these surveys, it will be assumed that approximately 75% percent of arrivals to sports events⁹ and 50% of arrivals to concerts would occur during the peak hour. Compared to sports events, the temporal distributions of concert events tend to exhibit less pronounced peaking characteristics because there are usually opening acts before the headliner band and a significant amount of attendees typically arrive after the concert begins.

⁸ It was assumed that arena events at the proposed multi-use facility location would have increases in auto and taxi splits of 15% and 10%, respectively. Since MSG would be relocated to a site approximately halfway between Penn Station and the proposed multi-use facility, the increases in auto/taxi modal splits were assumed to 50% of what was assumed for the proposed multi-use facility.

⁹ To provide for a conservative analysis, data from the March 16, 2003 and March 28, 2003 New York Knicks games were excluded due to their lower peak hour temporal distributions.

Similar to the projections made for the proposed multi-use facility, all event staff would be expected to arrive 2-3 hours prior to an event at MSG and would be on post prior to the gate opening time. For this reason, event staff would not be expected to travel during the peak arrival period of attendees.

Vehicle Occupancy

Table 10 shows the vehicle occupancies that will be used for attendees at a weeknight concert, weeknight sports event, and Sunday sports event; these were based on the Sam Schwartz LLC surveys.¹⁰

Table 10: Vehicle Occupancies

	Auto	Taxi
Weeknight Concert	2.5	2.6
Weeknight Sports Event	2.2	2.5
Sunday Sports Event	2.8	2.8

Source: Sam Schwartz LLC, 2003.

Projected Attendance Increases

Regardless of a potential relocation, the DGEIS will also consider that the overall attendance capacity of MSG would increase by approximately 18% (from 19,500 to 23,000). Although it has not been determined how this change would affect the event-specific seating capacities listed in Table 5, it is assumed that each capacity would increase by the same proportion. Based on a review of the existing 85th percentile attendances shown in Table 5, it is anticipated that the increased seating capacity would have an effect on three types of events (concerts, NBA basketball, and NHL hockey) because many of these events currently sell out and would be expected to draw additional attendees. As shown in Table 11, it is assumed that the 85th percentile attendances at these events would also increase by 18%. Conversely, events which do not currently sell out would not be expected to be impacted by the availability of additional seating.

Truck Trip Generation and Distribution

Incremental truck trips associated with the expansion of MSG will be forecasted using the methodologies provided within the Multi-Use Facility Transportation Planning Assumptions Technical Memorandum (November 11, 2003). Because there would be an 18% increase in attendance capacity, the number of truck deliveries on an average weekday (food, beverage, and other merchandise) would be expected to increase by the same proportion.¹¹

Table 11: Events with Projected Attendance Increases

Event Type	Existing Capacity	Projected Capacity	Existing 85 th Percentile Attendances			Projected 85 th Percentile Attendances		
			Overall	Weekday	Weekend	Overall	Weekday	Weekend
Concert	20,629	24,332	17,977	18,301	16,476	21,204	21,586	19,433
NBA Basketball	20,024	23,618	19,023			22,437		
NHL Hockey	18,295	21,579	17,380			20,499		

Source: Madison Square Garden, 2003.

Note: Projected capacities and attendances assume an 18% increase.

¹⁰ Sam Schwartz LLC, *Madison Square Garden Modal Split Analysis*, August 2003.

¹¹ An increase in truck trips associated with equipment for concerts and other events is not expected.

Selection of Weekday Evening Event for Analysis Purposes

The Multi-Use Facility Transportation Planning Assumptions Technical Memorandum (November 11, 2003) evaluated potential combinations of simultaneous weekday evening events that could take place at MSG (a sports event or a concert) and at the multi-use facility (a football game, a stadium concert, an arena concert, or an arena sports event). The results of this analysis showed that the largest number of total vehicle trips would result from the combination of arrivals to a concert at MSG and arrivals to a football game at the multi-use facility. This particular combination of events will be analyzed for future conditions with the proposed action during the weekday evening peak hour (8-9 PM). A subsequent review of the simultaneous events held at the arena and theater in 2002 indicates that 8 of the 38 weekday concerts occurred on nights with concurrent theater events (not including events held in the theater lobby). It is expected that the probability of a theater event occurring at the same time of both a weeknight football game and a concert is unlikely¹²; therefore a theater event is not recommended to be included as part of the combination of reasonable worst-case events selected for analysis.¹³

Selection of Sunday Afternoon Event for Analysis Purposes

The Convention Center Expansion Transportation Planning Assumptions Technical Memorandum (October 24, 2003) determined that the Sunday 4-5 PM period would be the worst-case scenario for trips on a weekend as it would coincide with the peak hour of activity at the Convention Center and departures associated with a 1 PM football game at the adjacent multi-use facility. As shown in Table 2, the primary events held on Sundays at MSG in 2002 involved NBA basketball games and NHL hockey games.¹⁴ In order to determine how arrivals and departures to these events would interface with the selected 4-5 PM peak hour, the starting and ending times of these events were examined (using typical event durations provided by MSG); these are compared in Table 12. As shown in this table, departures associated with the 1 PM Rangers games and arrivals associated with the 5 PM Rangers games would have the potential to occur during the 4-5 PM peak hour. The pattern of starting times for Knicks games shown in Table 12 would not be expected to result in arrivals/departures occurring during the 4-5 PM peak hour.

Table 12: Start and End Times of Sunday Sports Events at MSG in 2002

New York Knicks			New York Rangers		
Date	Start Time	End Time	Date	Start Time	End Time
2/3/02	12:00 PM	2:30 PM	2/10/02	1:00 PM	3:45 PM

11/24/02	7:00 PM	9:30 PM	9/29/02	5:00 PM	7:45 PM
12/22/02	7:00 PM	9:30 PM	11/3/02	5:00 PM	7:45 PM

Source: Madison Square Garden, 2003.

¹² Including the 2003 season, the New York Jets have only hosted a total of 14 Monday Night Football games since 1970 (an average of less than one per year).

¹³ According to Madison Square Garden management, there would not be a theater in the new arena if MSG is relocated.

¹⁴ WNBA basketball games and circus performances were excluded because they had lower 85th percentile attendances.

A review of the 2003-04 Knicks' and Rangers'

schedules indicates that a comparable pattern will occur on Sundays this season: the Knicks have one game scheduled at 1 PM, three games scheduled for 7 PM, and one game scheduled for 7:30 PM; all four of the Rangers games on Sunday are scheduled for 5 PM. Therefore, it is assumed that travel associated with Rangers games would generally have the greatest potential to overlap with the 4-5 PM peak hour.

As previously described, it was assumed that 75% of arrivals to a sports event at MSG would occur during the peak arrival hour. Based on projections made by the New York Jets for the temporal distribution of departures from the multi-use facility in an arena configuration, it is assumed that 90-95% of fans would leave MSG in the hour immediately following the end of an event, and that these departures would be concentrated within a 20-minute period (the time it would take to clear the arena). Therefore, it is expected that the majority of departures associated with a 1 PM game would occur during the 3-4 PM period. For this reason, it is recommended that the travel demand associated with arrivals to a 5 PM Rangers game should be included as part of the Sunday afternoon peak hour (4-5 PM) as this combination of events would have the greatest potential for traffic implications.

It should be noted that although there were no overlapping arena and theater events on Sundays (as shown in Table 4), there were five Sunday afternoon performances of "A Christmas Carol" in December (during the NFL football season) that began at 5 PM, and arrivals associated with this event would have a potential to overlap with the 4-5 PM peak hour. On these five Sundays, there were two Rangers games scheduled for 1 PM, one Knicks game scheduled for 7 PM, and two dark days in the arena. Because the start times of these theater events were staggered in such a way were did not coincide with arena events, it is not realistic to combine travel demand associated with both events. The travel demand associated with a Rangers game (an attendance capacity of 18,295) would be expected to be more conservative than the travel demand associated with "A Christmas Carol" (an attendance capacity of 5,600). Although the travel demand associated with a theater event will not be included in the Sunday afternoon peak hour, its associated parking demand will be included to provide for a more conservative analysis.
